Hepix Fall Meeting 2012

Thomas Roth

GSI Darmstadt

16. October 2010

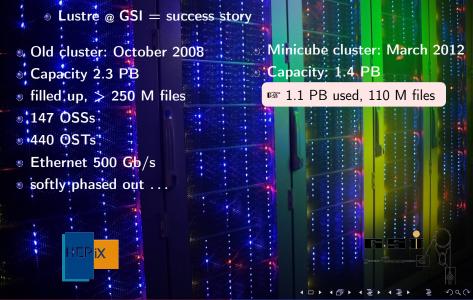

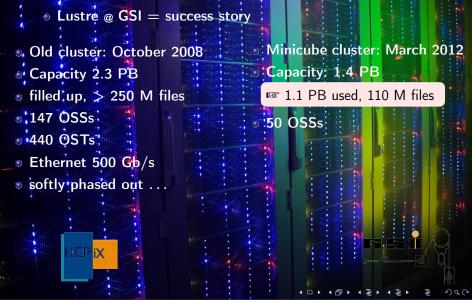

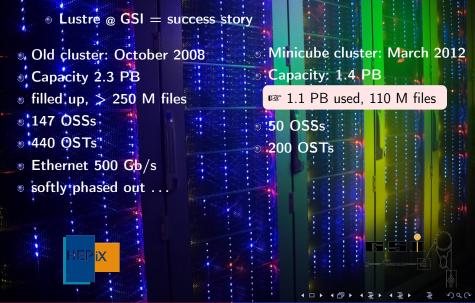

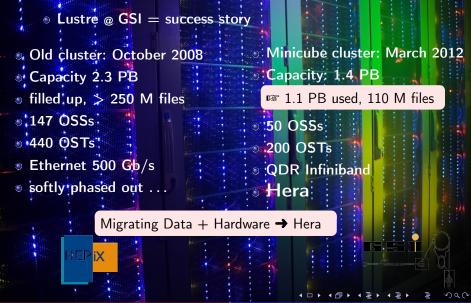

Outline

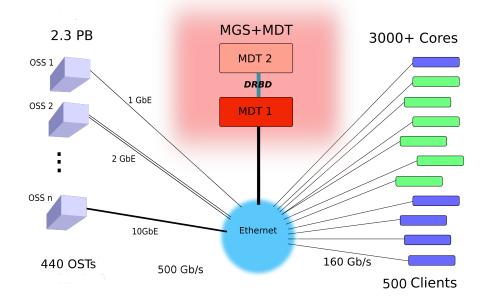

GSI Lustre Setup

- Lustre Stability
- Migrating from Lustre to Lustre
- Growing beyond Minicube

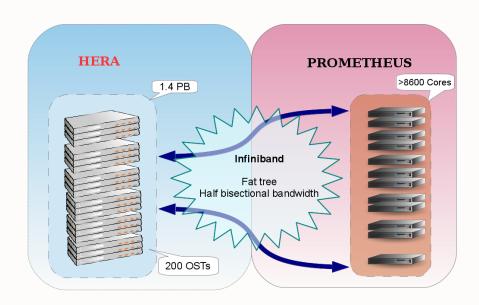

Old cluster

New cluster: Minicube

Infiniband fabric

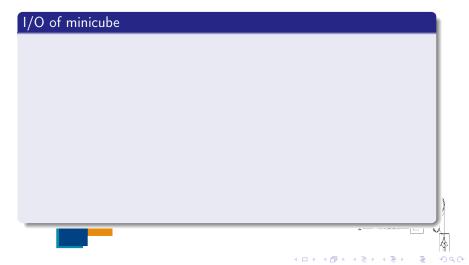

- Infiniband fabric
- administrative network (IPMI), no ethernet

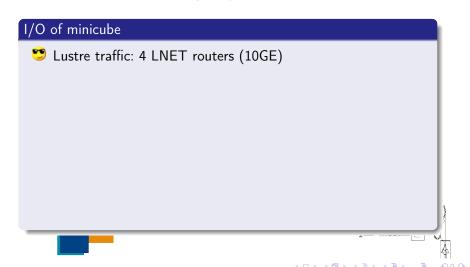

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only
 - Used also for PXE booting, DHCP, installation over Infiniband

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only (4)
 - Used also for PXE booting, DHCP, installation over Infiniband
 - But: no NFS, no home directories on compute nodes

- Infiniband fabric
- administrative network (IPMI), no ethernet

- 5 Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only
 Used also for PXE booting, DHCP, installation over Infiniband
 - But: no NFS, no home directories on compute nodes
- Software installation/compilation on Lustre: bad choice

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only
 Used also for PXE booting, DHCP, installation over Infiniband
 - But: no NFS, no home directories on compute nodes
- Software installation/compilation on Lustre: bad choice
- Put software on CVMFS!

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only
 Used also for PXE booting, DHCP, installation over Infiniband
 - But: no NFS, no home directories on compute nodes
- Software installation/compilation on Lustre: bad choice
- 🤔 Put software on CVMFS!
 - Great success

- Infiniband fabric
- administrative network (IPMI), no ethernet

- Lustre traffic: 4 LNET routers (10GE)
 - 40 Gb/s for clients outside
 - IP traffic: Eth-IB gateway box with 1GE only
 Used also for PXE booting, DHCP, installation over Infiniband
 - But: no NFS, no home directories on compute nodes
- Software installation/compilation on Lustre: bad choice
- Put software on CVMFS!
 - Great success
 - Now testing proxy on LNET router

Old Lustre: 2.6.27 Lustre 1.8.4

Old Lustre: 2.6.27 Lustre 1.8.4

• Hera: 2.6.32 Lustre 1.8.7-wc, no additional patches

- Old Lustre: 2.6.27 Lustre 1.8.4
- Hera: 2.6.32 Lustre 1.8.7-wc, no additional patches
- Soon: test system running Lustre 2.3

- Old Lustre: 2.6.27 Lustre 1.8.4
- Hera: 2.6.32 Lustre 1.8.7-wc, no additional patches
- Soon: test system running Lustre 2.3
- Hera: Robinhood 2.3.3

Lustre Software

Old Lustre: 2.6.27 Lustre 1.8.4

• Hera: 2.6.32 Lustre 1.8.7-wc, no additional patches

• Soon: test system running Lustre 2.3

• Hera: Robinhood 2.3.3

Hera Scan: 24 hours

Lustre Software

- Old Lustre: 2.6.27 Lustre 1.8.4
- Hera: 2.6.32 Lustre 1.8.7-wc, no additional patches
- Soon: test system running Lustre 2.3
- Hera: Robinhood 2.3.3
 - Hera Scan: 24 hours
 - Yery helpful: Tell users where their Terabytes are

Lustre Software

- Old Lustre: 2.6.27 Lustre 1.8.4
- Hera: 2.6.32 Lustre 1.8.7-wc, no additional patches
- Soon: test system running Lustre 2.3
- Hera: Robinhood 2.3.3
 - Hera Scan: 24 hours
 - Uery helpful: Tell users where their Terabytes are
 - Dangerous to MDS!

Lustre Crashes

➤ Both old system and new installation very stable

Lustre Crashes

➤ Both old system and new installation very stable

One LBUG recurring

Lustre Crashes

Both old system and new installation very stable

```
(ldlm_lock.c:165:ldlm_lock_put())
```

ASSERTION(atomic_read(&(lock->l_export)->exp_refcount)

< 0x5a5a5a) failed

Lustre Crashes

Both old system and new installation very stable

```
One LBUG recurring
```

```
(ldlm_lock.c:165:ldlm_lock_put())
ASSERTION(atomic_read(&(lock->l_export)->exp_refcount)
< 0x5a5a5a) failed</pre>
```

→ LU-919 (http://jira.whamcloud.com/browse/LU-919), unresolved in 1.8

Lustre Crashes

- Both old system and new installation very stable
- One LBUG recurring

```
(ldlm_lock.c:165:ldlm_lock_put())
ASSERTION(atomic_read(&(lock->l_export)->exp_refcount)
< 0x5a5a5a) failed</pre>
```

- → LU-919 (http://jira.whamcloud.com/browse/LU-919), unresolved in 1.8
- Trigger: high load by users + Robinhood running

Lustre Crashes

- Both old system and new installation very stable
- One LBUG recurring

```
(ldlm_lock.c:165:ldlm_lock_put())
ASSERTION(atomic_read(&(lock->l_export)->exp_refcount)
< 0x5a5a5a) failed</pre>
```

- → LU-919 (http://jira.whamcloud.com/browse/LU-919), unresolved in 1.8
 - Trigger: high load by users + Robinhood running
 - Hera: switch to DRDB-partner (manual, no HA)

Lustre Crashes

- Both old system and new installation very stable
- One LBUG recurring

```
(ldlm_lock.c:165:ldlm_lock_put())
ASSERTION(atomic_read(&(lock->l_export)->exp_refcount)
< 0x5a5a5a) failed</pre>
```

- → LU-919 (http://jira.whamcloud.com/browse/LU-919), unresolved in 1.8
 - 🀸 Trigger: high load by users + Robinhood running
 - Hera: switch to DRDB-partner (manual, no HA)
 - Hera: ext4-based ldiskfs: fsck times down to < 20 min

Data Migration

Old Lustre → Hera

Data Migration

- Old Lustre → Hera
- done by the users

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80% /hera

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80%
 /hera
- smaller groups still working on old cluster

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80%
- smaller groups still working on old cluster

Hardware Migration

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80%
- smaller groups still working on old cluster

Hardware Migration

Container with 10 racks

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80%
- smaller groups still working on old cluster

Hardware Migration

• Container with 10 racks Bouillon Cube

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80%
- smaller groups still working on old cluster

Hardware Migration

- Container with 10 racks
 Bouillon Cube
- 44 OSS, 1.3 PB, less than 3 years old

Data Migration

- Old Lustre → Hera
- done by the users filesystem summary: 1.4P 1.1P 275.8T 80%
 /hera
- smaller groups still working on old cluster

Hardware Migration

- Container with 10 racks
 Bouillon Cube
- 44 OSS, 1.3 PB, less than 3 years old
- Move them to Minicube

Hardware Migration: Move OSS to Minicube

→ Exceedingly tedious task:

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c
- Scan of entire Lustre fs

Hardware Migration: Move OSS to Minicube

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - 2 Find files on OST015c Scan of entire Lustre fs

Do it for many directories in parallel

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - 2 Find files on OST015c Scan of entire Lustre fs
 - □ Do it for many directories in parallel
 Don't kill MDT!

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c
 Scan of entire Lustre fs
 Do it for many directories in parallel
 Don't kill MDT!
 - Migrate OST015c-files to other OSTs

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c
 Scan of entire Lustre fs
 Do it for many directories in parallel
 Don't kill MDT!
 - Migrate OST015c-files to other OSTs Don't kill that OSS!

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - 2 Find files on OST015c Scan of entire Lustre fs
 - Do it for many directories in parallel
 Don't kill MDT!
 - Migrate OST015c-files to other OSTs 5 Don't kill that OSS!

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - 2 Find files on OST015c Scan of entire Lustre fs

 Scan of entire Lustre fs

 Do it for many directories in parallel 4 Don't kill MDT!
 - Do it for many directories in parallel Ton t kill MDT!
 - Migrate OST015c-files to other OSTs Don't kill that OSS!
 - Procedure needs enough space on remaining OSTs

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c
 Scan of entire Lustre fs
 Do it for many directories in parallel
 Don't kill MDT!

 - Procedure needs enough space on remaining OSTs
 - Depends on users: move their important data to Hera, delete old stuff

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c
 Scan of entire Lustre fs
 Do it for many directories in parallel
 Don't kill MDT!
 - Migrate OST015c-files to other OSTs 5 Don't kill that OSS!
 - Procedure needs enough space on remaining OSTs
 - Depends on users: move their important data to Hera, delete old stuff
 - Half of container done, 0.5 PB to be added to Hera

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Scan of entire Lustre fs 2 Find files on OST015c.
 - Don't kill MDT! Do it for many directories in parallel
 - Don't kill that OSS! Migrate OST015c-files to other OSTs
 - Procedure needs enough space on remaining OSTs
 - Depends on users: move their important data to Hera, delete old stuff
 - Half of container done, 0.5 PB to be added to Hera

Hardware Migration: Move OSS to Minicube

- → Exceedingly tedious task:
 - Set OST015c read-only on MDT
 - Find files on OST015c
 Scan of entire Lustre fs
 Do it for many directories in parallel
 Don't kill MDT!
 - Migrate OST015c-files to other OSTs Don't kill that OSS!
 - Procedure needs enough space on remaining OSTs
 - Depends on users: move their important data to Hera, delete old stuff
 - Half of container done, 0.5 PB to be added to Hera

• Old Lustre as of 15. Oktober 2012: Size down to 1.6 PB, 1 PB used

Growing beyond Minicube

Growing beyond Minicube

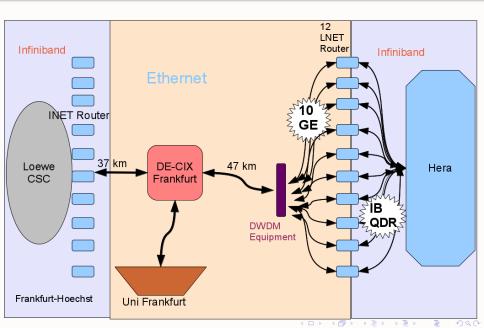

TeraLink Project

• Connect institutes in Rhein-Main-area to storage @ GSI

TeraLink: Connect outside institutes to storage @ GSI First step: Connecting Loewe with Hera

• First step: Loewe CSC to Hera

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@o2ib0; tcp2 10.16.1.[220-231]@o2ib0"

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@o2ib0; tcp2 10.16.1.[220-231]@o2ib0"

Add route to GSI-LNET-Routers onto Loewe clients

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@02ib0; tcp2 10.16.1.[220-231]@02ib0"

Add route to GSI-LNET-Routers onto Loewe clients

lnet networks=tcp2(ib0)

lnet routes='o2ib 172.16.0.[1,5,9,13,17,21,25,29,33,37,41,45]@tcp2"

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@o2ib0; tcp2 10.16.1.[220-231]@o2ib0"

Add route to GSI-LNET-Routers onto Loewe clients

lnet networks=tcp2(ib0)

lnet routes="02ib 172.16.0.[1,5,9,13,17,21,25,29,33,37,41,45]@tcp2"

lozone from Loewe

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@o2ib0; tcp2 10.16.1.[220-231]@o2ib0"

Add route to GSI-LNET-Routers onto Loewe clients

lnet networks=tcp2(ib0)

lnet routes="02ib 172.16.0.[1,5,9,13,17,21,25,29,33,37,41,45]@tcp2"

lozone from Loewe

• 1 client: 730 MB/s

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@02ib0; tcp2 10.16.1.[220-231]@02ib0"

Add route to GSI-LNET-Routers onto Loewe clients

lnet networks=tcp2(ib0)

lnet routes="02ib 172.16.0.[1,5,9,13,17,21,25,29,33,37,41,45]@tcp2"

lozone from Loewe

- 1 client: 730 MB/s
- 12 clients: 4.3 GB/s

- First step: Loewe CSC to Hera
- 12 batch machines, stuffed w 10GE cards, as LNET router
- Second route added to Hera servers' modprobe.d/lustre.conf

lnet routes=''tcp1 10.16.1.[199-202]@02ib0; tcp2 10.16.1.[220-231]@02ib0"

Add route to GSI-LNET-Routers onto Loewe clients

lnet networks=tcp2(ib0)

lnet routes="02ib 172.16.0.[1,5,9,13,17,21,25,29,33,37,41,45]@tcp2"

lozone from Loewe

- 1 client: 730 MB/s
- 12 clients: 4.3 GB/s
- More investigation necessary

TeraLink Project

• Expand Lustre link to other institutes

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI
 - MDS ↔ OSS works, clients still uncooperative

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI

 - Testing various Kerberos modi on performance impact

TeraLink Project

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI

 - Testing various Kerberos modi on performance impact

More space, more, more

TeraLink Project

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI

 - Testing various Kerberos modi on performance impact

More space, more, more

• Hera already full

TeraLink Project

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI

 - Testing various Kerberos modi on performance impact

More space, more, more

- Hera already full
- + 1.3 PB from container servers

TeraLink Project

- Expand Lustre link to other institutes
- Mapping of alien UIDs and GIDs into GSI user space
- Progress on Lustre 2.3x with Kerberos @ GSI

 - Testing various Kerberos modi on performance impact

More space, more, more

- Hera already full
- + 1.3 PB from container servers
- + 3 PB new hardware

Lustre @ GSI
