Quattor update - Integrating Aquilon into a grid site

Monday, 15 October 2012 16:00 (30 minutes)

Aquilon is a Quattor configuration database and management broker developed by by an investment to meet the needs of their large worldwide grid. Providing much better relational integrity to the Quattor configuraton database and a workflow that is both more agile and more disciplined, Aquilon can transform the use of Quattor to manage sites.

This talk will discuss RAL Tier 1 experiening deployed an Aquilon instance outside its original commercial environment and beginning to use it for managing a grid site.
