

# setting options/parameters for hadronic models

---

the INCL++ case study

Davide Mancusi

Geant4 collaboration meeting  
11<sup>th</sup> September 2012

- ▶ projectile-target **asymmetry**
- ▶ **two** calculation modes
  - ▶ *accurate projectile*
  - ▶ *accurate target*
- ▶ choice depends on **relevant observable**

the **end-user**  
should decide!

$^{12}\text{C}(^{12}\text{C},x)n$  at 290 A MeV

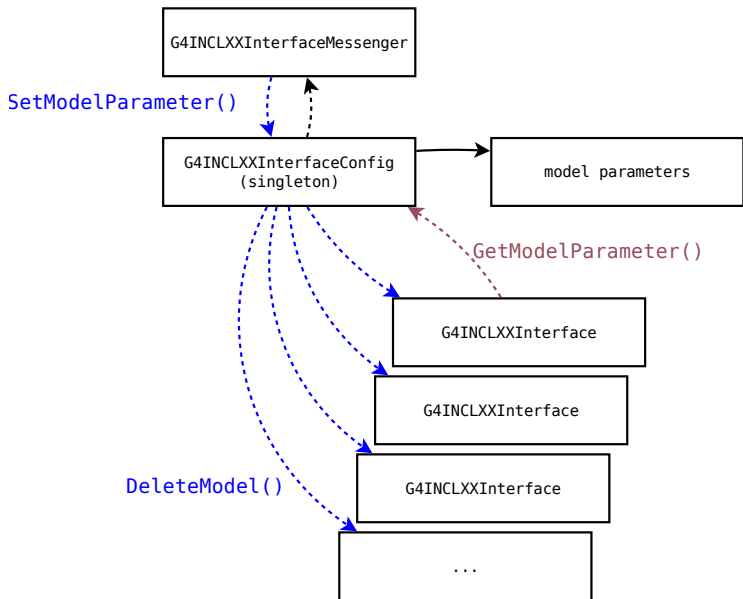

Y. Iwata *et al.*

Phys. Rev. C64 (2001) 054609

several possibilities:

- ▶ code editing
- ▶ physics list
- ▶ environment variables
- ▶ **model-specific messengers**

# INCL++ interface messenger

we use macros for the following **model parameters**:

`/inclxx/accurateDescription`

- ▶ target OR projectile

`/inclxx/maxProjMass`

- ▶ max projectile mass in accurate-target mode
- ▶ max target mass in accurate-projectile mode

`/inclxx/maxClusterMass`

- ▶ max mass of produced cascade clusters

**none** of these macros are required
