

PROPOSED MODIFICATIONS OF EM AND RELATED INTERFACES

V.Ivanchenko and S.Incerti for EM working groups

17th Geant4 Workshop

10-14 September 2012

Chartres, France

Modifications in EM categories

- All major migrations already done
- We want to force migration for 9.6 of msc sampling from PostStep to AlongStep to avoid any clash with Geant4 MT developments
 - This will not affect user interface
- We want to remove few obsolete methods in the base EM classes
 - Warning message will be added to all these classes
- We plan to remove few obsolete models
 - In particular decrease number of UrbanMscModels
- DNA development may require addition of new methods

Possible suggesting to kernel

- Provide public interfaces with const pointers/references to const objects:
 - `const G4ParticleDefinition*`
 - `const G4Material*`
- Remove «ApplyCuts» from `G4SteppingManager` and `G4ParticleDefinition`
- From yestaday discussion on hadronics we support remove of 7 intermediate classes
`G4VDiscreteProcess`, `G4VRestProcess`....
