ICP MS applications

Why ICP MS @ LNGS?

Detection of extremely weak events

1400 m of rock (3600 mwe)

Cosmic ray flux reduction: 10^6

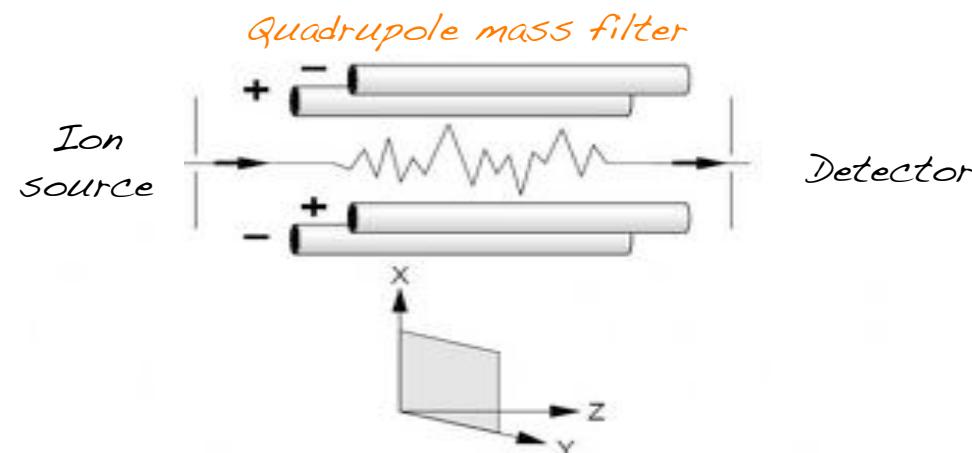

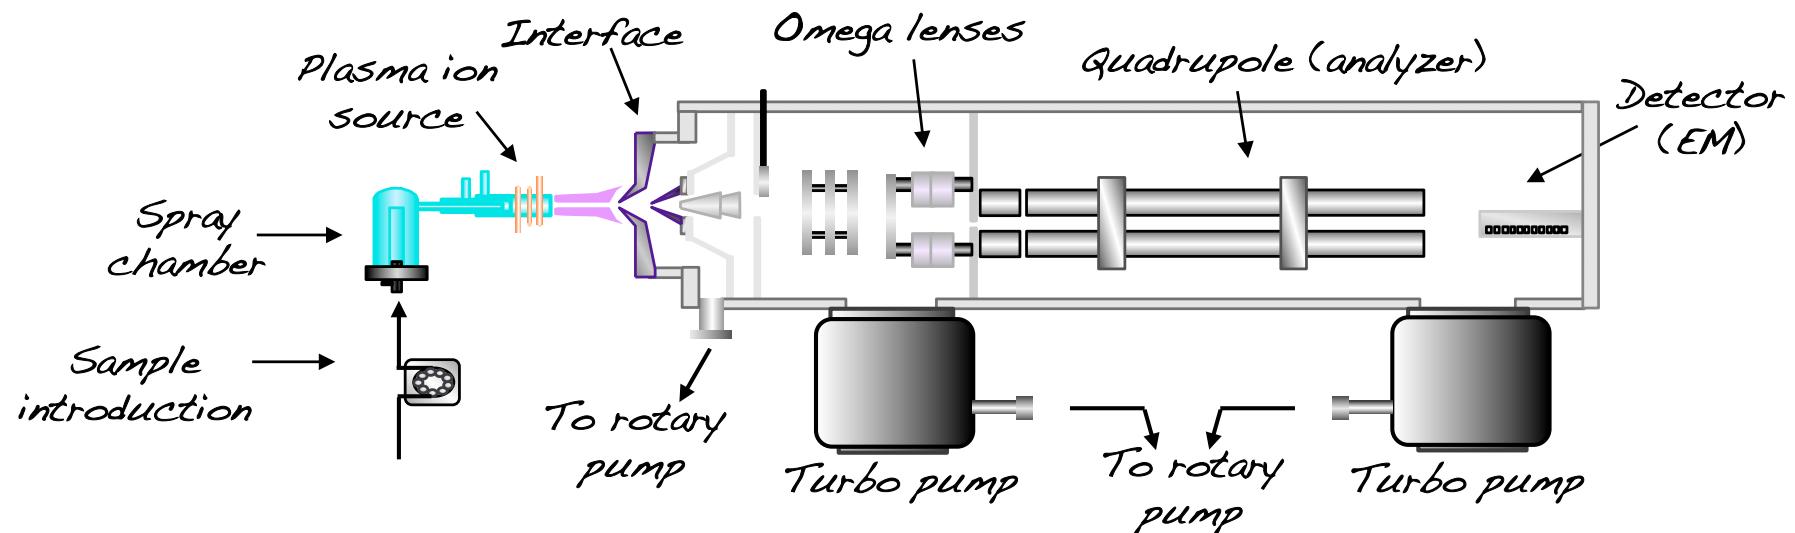

Neutron flux reduction: 10^4

- The underground facility provides the necessary low radioactive background
- Selection of highly radio-pure materials

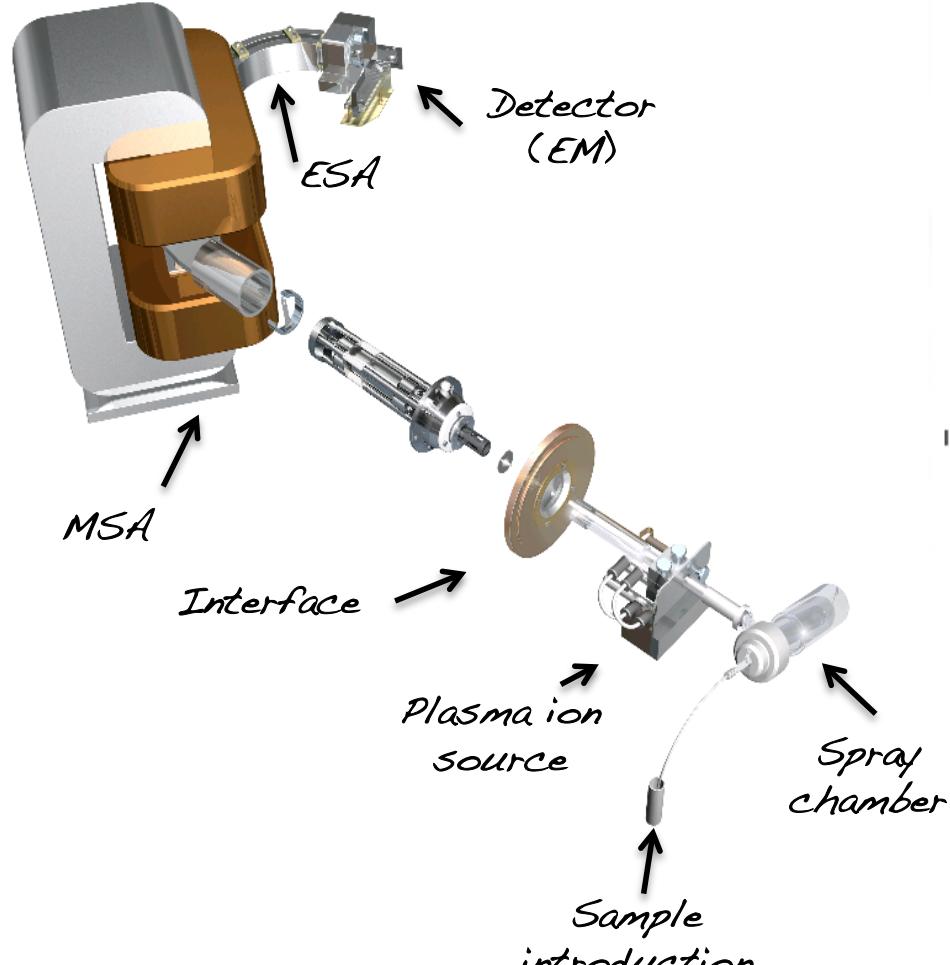

K Pb Th U

Two ICP mass spectrometers @ LNGS

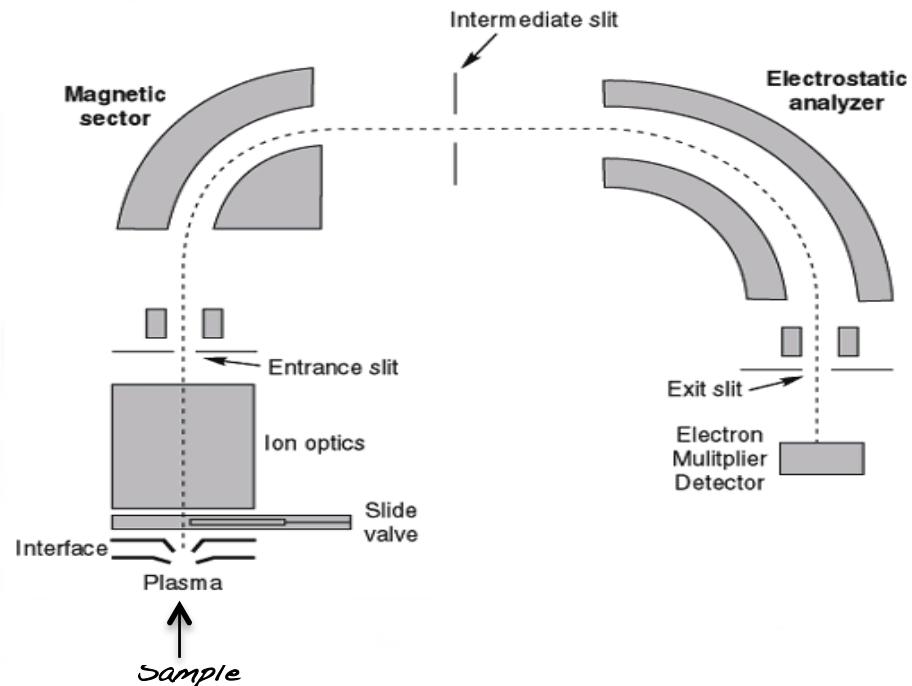

-ICP QMS (quadrupole mass analyzer) - Agilent 7500a

- High Resolution ICP MS (double focusing mass analyzer)
Thermo Element2

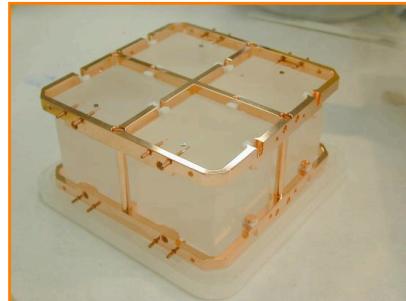

**Double focusing mass analyzer
(MSA + ESA)**

MAINLY: low radioactivity measurements

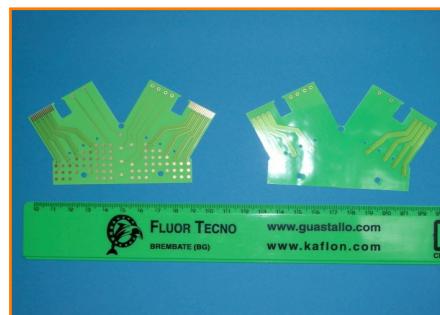

- ≈200 samples/year (complex matrices)
- few hundreds samples/year (reagents and water)

Few examples...

Cu, TeO₂ and reagents
-CUORE-

Printed Circuit Board (PCB)
-GERDA-

Metals and alloys
-GERDA, XENON, DARK SIDE-

Al-Mylar insulating foils
-XENON, DARK SIDE-

CHALLENGE:
always better detection limits
