

WLCG / EGEE / OSG operations and evolution in the coming years

Tuesday 27 November 2007 13:30 (2 hours)

WLCG / EGEE / OSG operations are now well established, through:

- Weekly joint operations meetings
- Bi-annual (roughly) workshops
- Sessions at WLCG collaboration workshops
- A set of tools, procedures and documentation.

This session summarises the current state of global operations as well as the possible evolution beyond (or even during) the next phase of EGEE (III) - in the light of the EGI Design Study.

In particular, we need to establish a clear view of our current needs in terms of efficient operations and how this would map to a model where National Grid Initiatives (NGIs) play a significant role. The issues of 24x7 operations also needs to be discussed with priority.

Session Classification: WLCG Operations - What is Required to support LHC experiments?
