Experiment Operations

Tuesday 27 November 2007 16:00 (1h 30m)

What is it that the experiments hate most about the current operations setup?

<P> What explicitly is missing from the point of view of the experiments? <P> What can be done better? What (perhaps?) should not be done at all? <P> Should we somehow integrate global / experiment operations? e.g. via repeat consoles in the various operations rooms?

Session Classification: WLCG Operations - What is Required to support LHC experiments?
