

# Overview

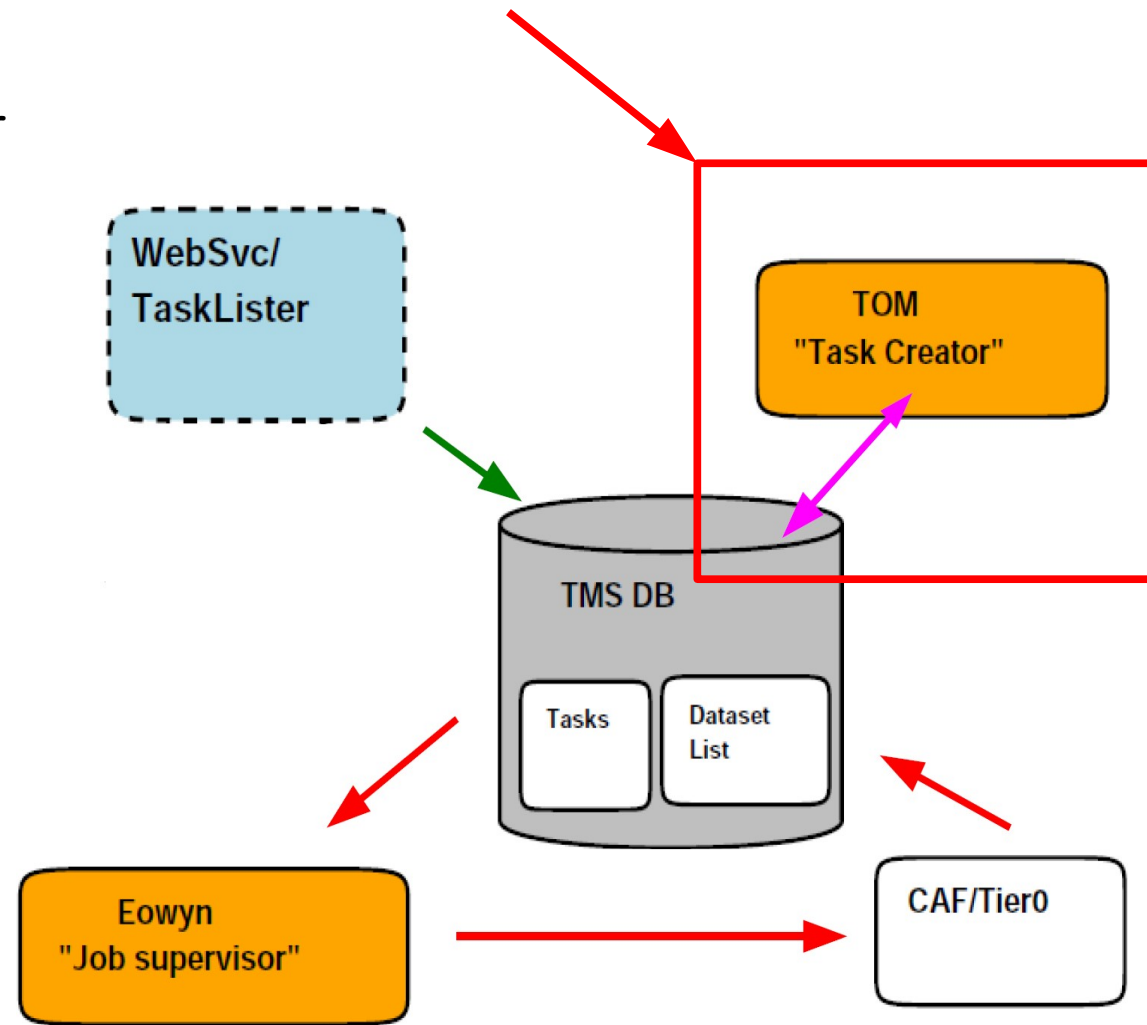

1) Maintain the automatic infrastructure for SCT calibration job production.

- Clear and simple system at the first glance.
- Need real experience with troubleshooting

2) Maintain the DB upload infrastructure

- Very compact, but not-so-clear for me scripts (PHP).
- BUT: Very stable code and conceptually clear idea.

# Current status

- Routine work\*

\* **LEARNING:** looking into code and understanding it, getting in touch with the current experts, ...

# Plans

- Taking over responsibilities in the two tasks and keeping them at DESY in the future (I hope).
- Exploring possible improvements in the system: speed up of the loop by splitting the main (Noisy Strip) task into parallel jobs, ..?
