Friday, Sept 28

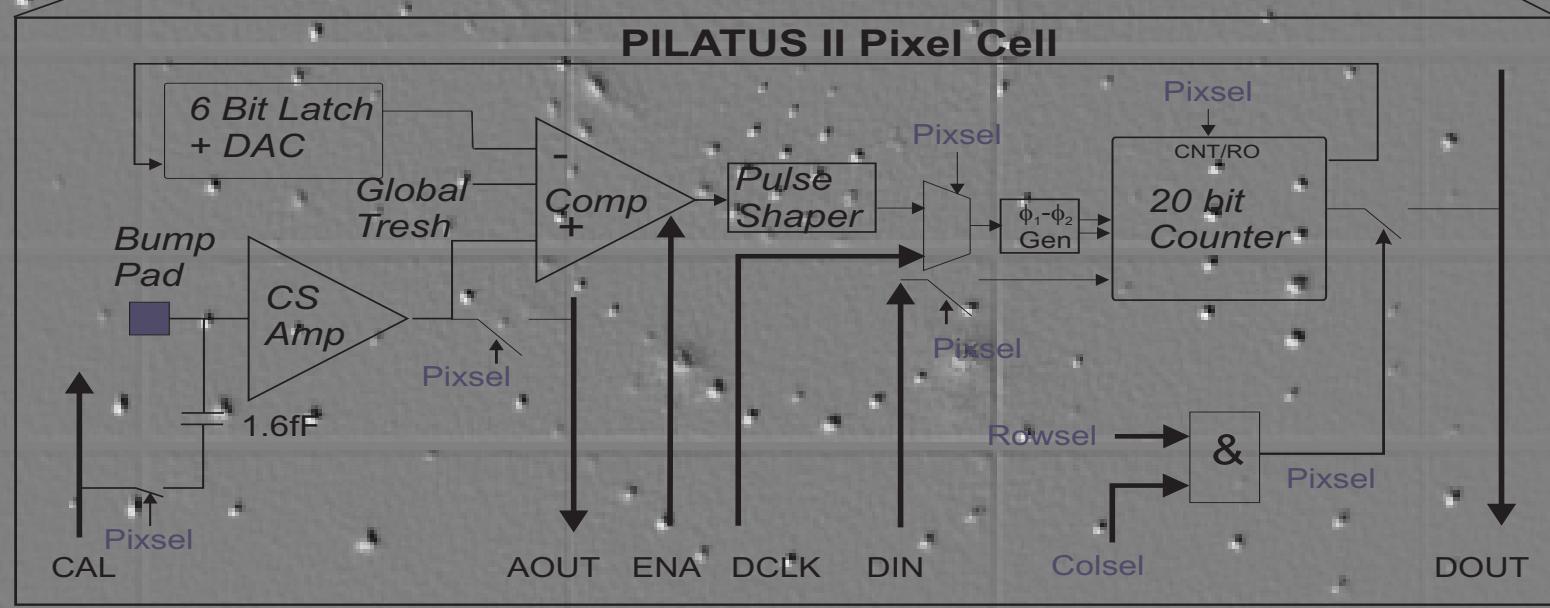

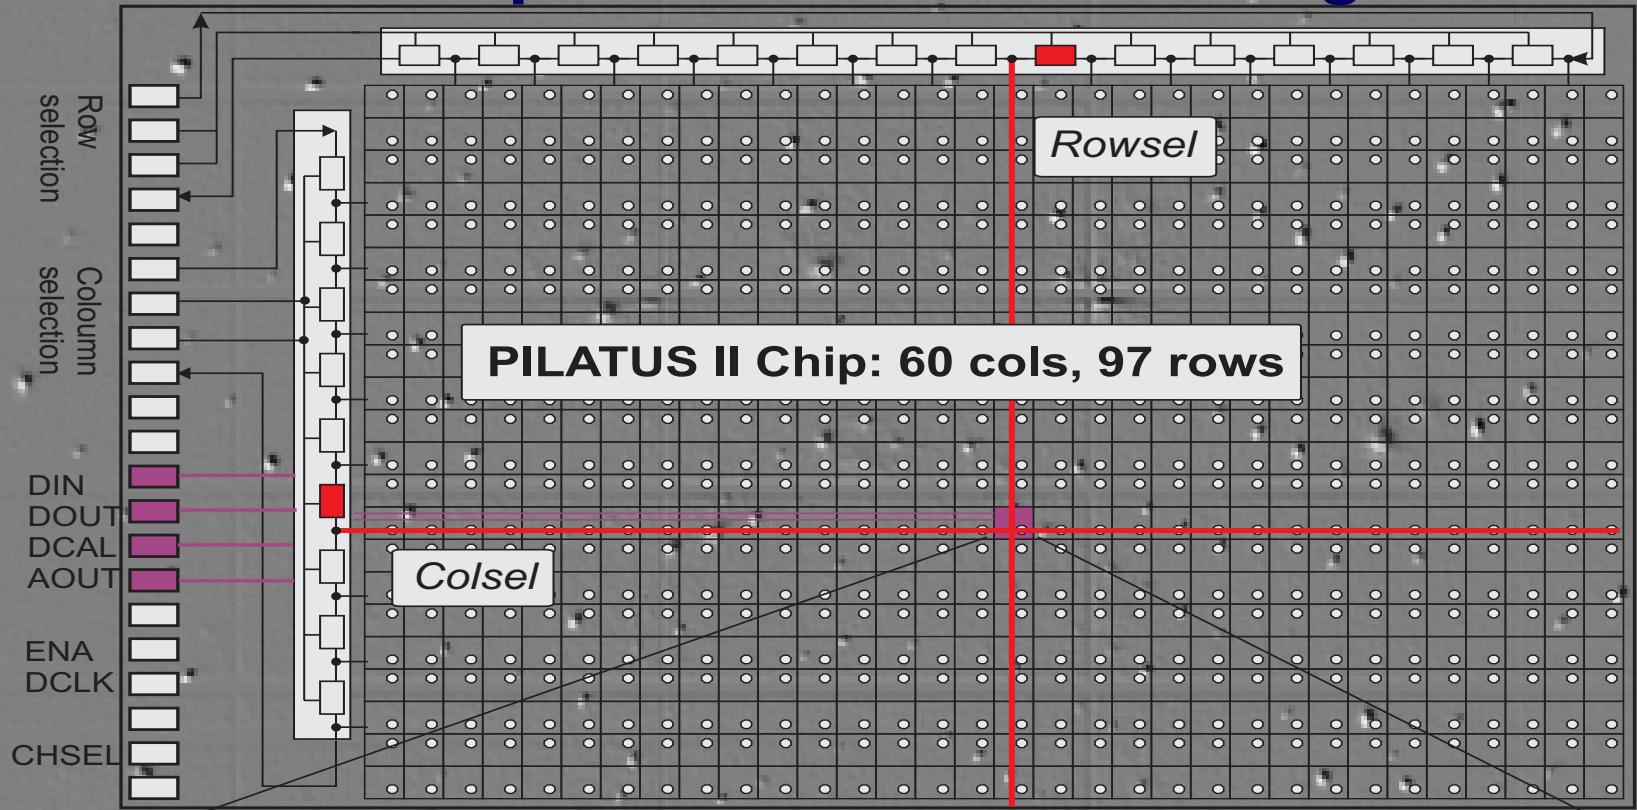

Outline

- **Single Photon Counting Principle**
 - Detection
 - Amplification and Counting
 - Hybrid Construction
 - Modular System
- **Experimental Experiences**
 - High Dynamic Range
 - Threshold Suppression
 - Point Spread Function
 - High Frame Rate
 - Fast Scan
- **General Experiences**
 - Charge Sharing and Calibration
 - Paralizable Counter
 - Analyze Software
 - Mismanipulation

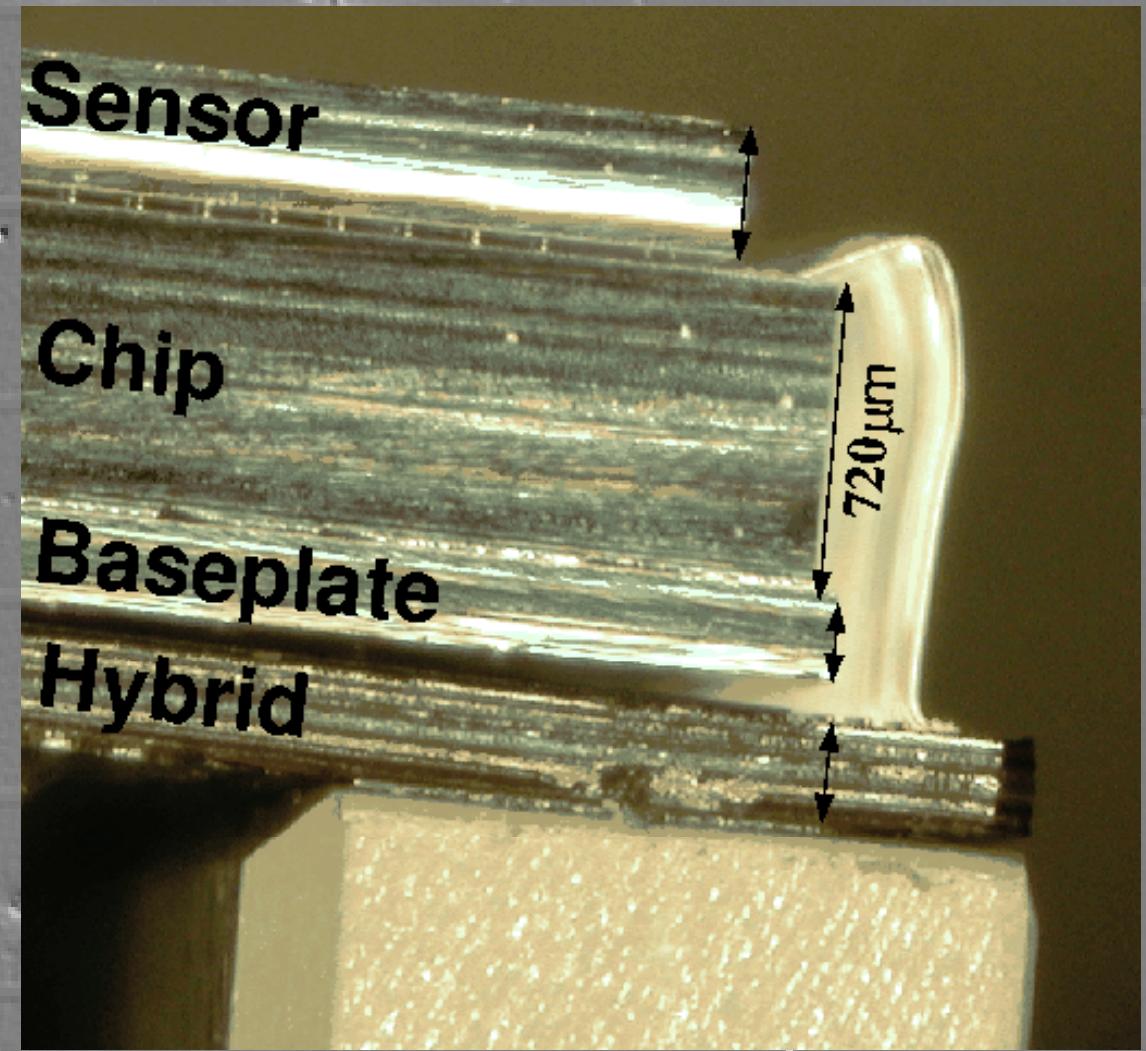

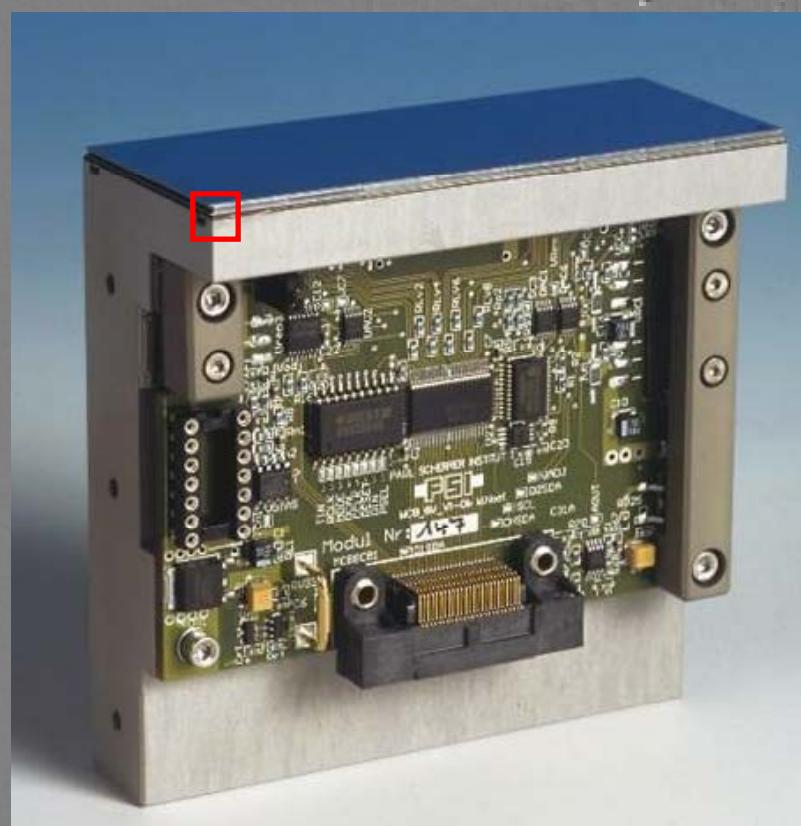

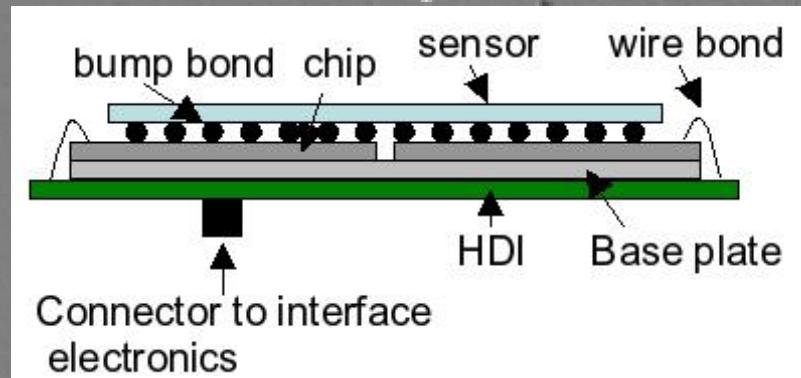

X-Ray Detection

Amplification and Counting

Hybrid Construction

Modular System

No of Modules	1
Detector Size [mm]	34 x 84
Module Array	1 x 1
Format	94'965 pixels
Spatial resolution	0.172 x 0.172 mm ²
Dynamic range/pixel	20bits
Count rate/pixel	~3 MHz/pixel
Readout time	3.5 ms
Frame rate	250 Hz
Power consumption	5 W
Operating temperature	25°C
Dimensions [mm]	265 x 140 x 85
Weight Approx.	5 kg

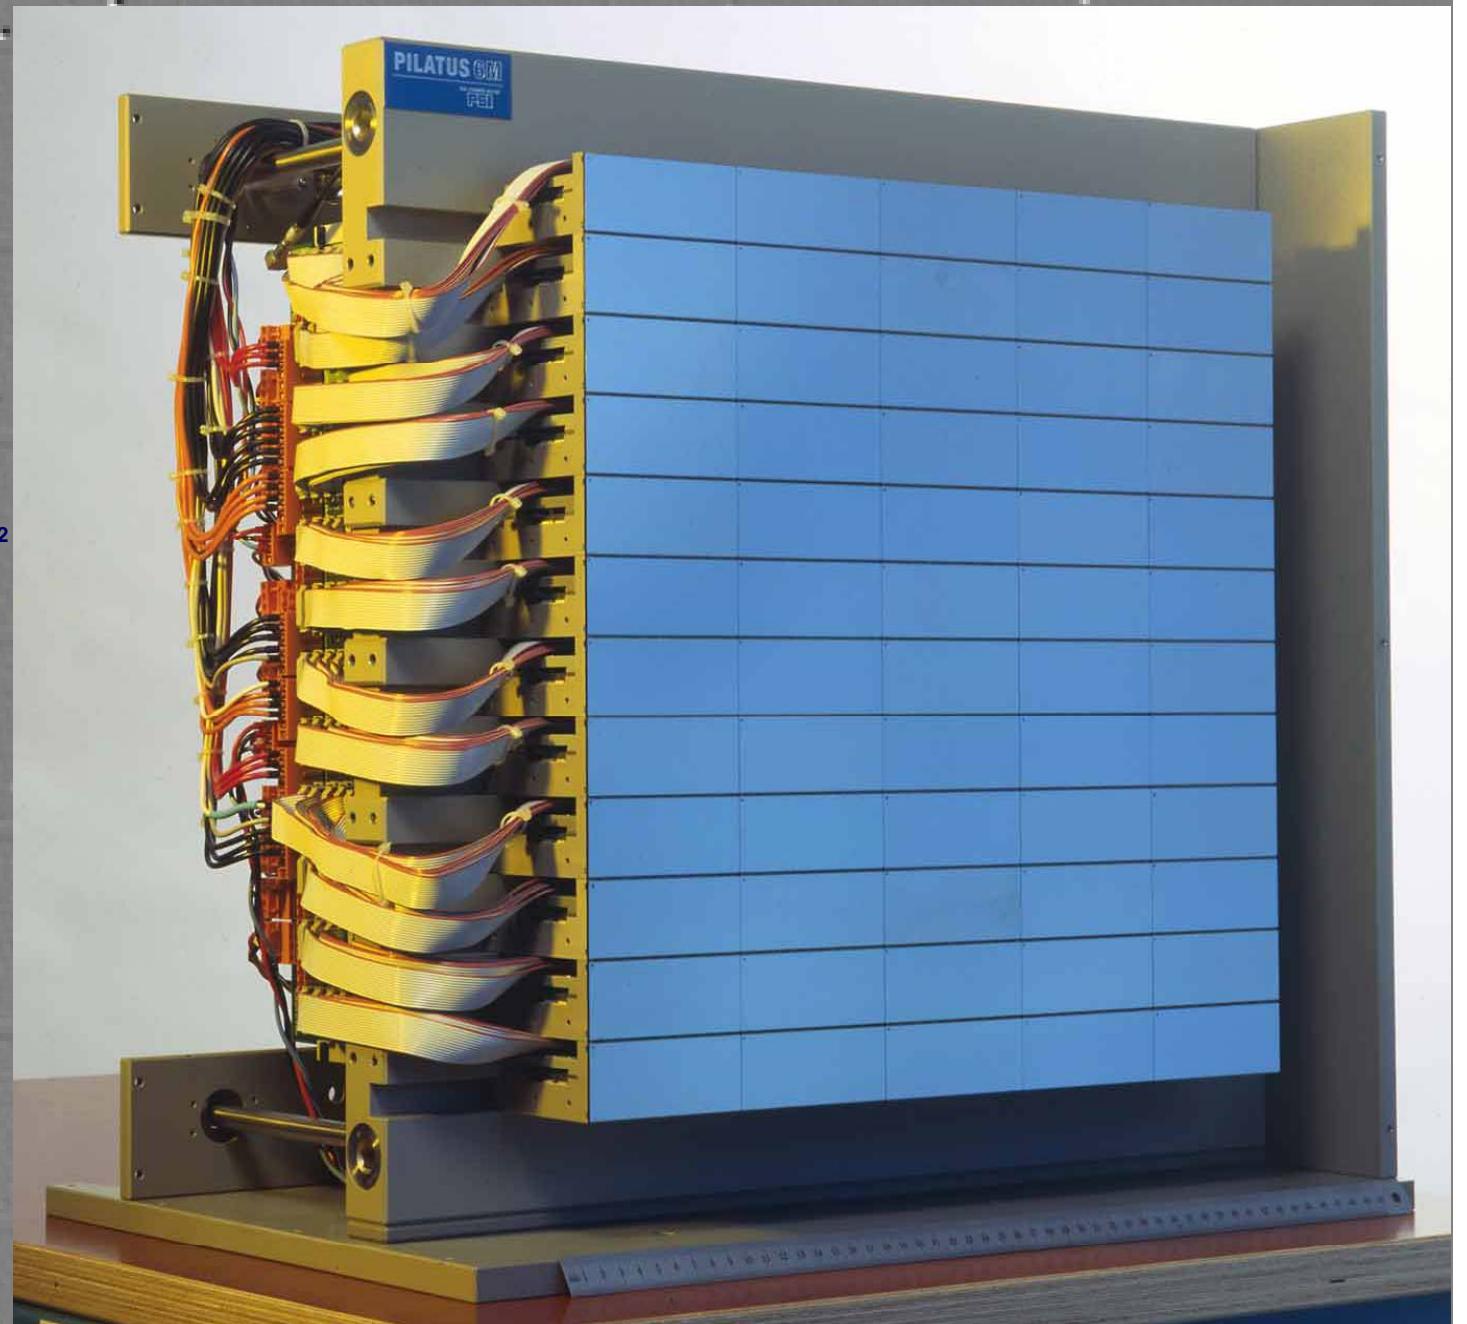

Modular System

No of Modules	24
Detector Size [mm]	254 x 289
Module Array	3 x 8
Format	2'279'160 pixels
Spatial resolution	0.172 x 0.172 mm ²
Dynamic range/pixel	20bits
Count rate/pixel	~3 MHz
Readout time	3.5 ms
Frame rate	30 Hz
Power consumption	200 W
Operating temperature	25°C
Dimensions [mm]	388 x 434 x 526
Weight Approx.	50 kg

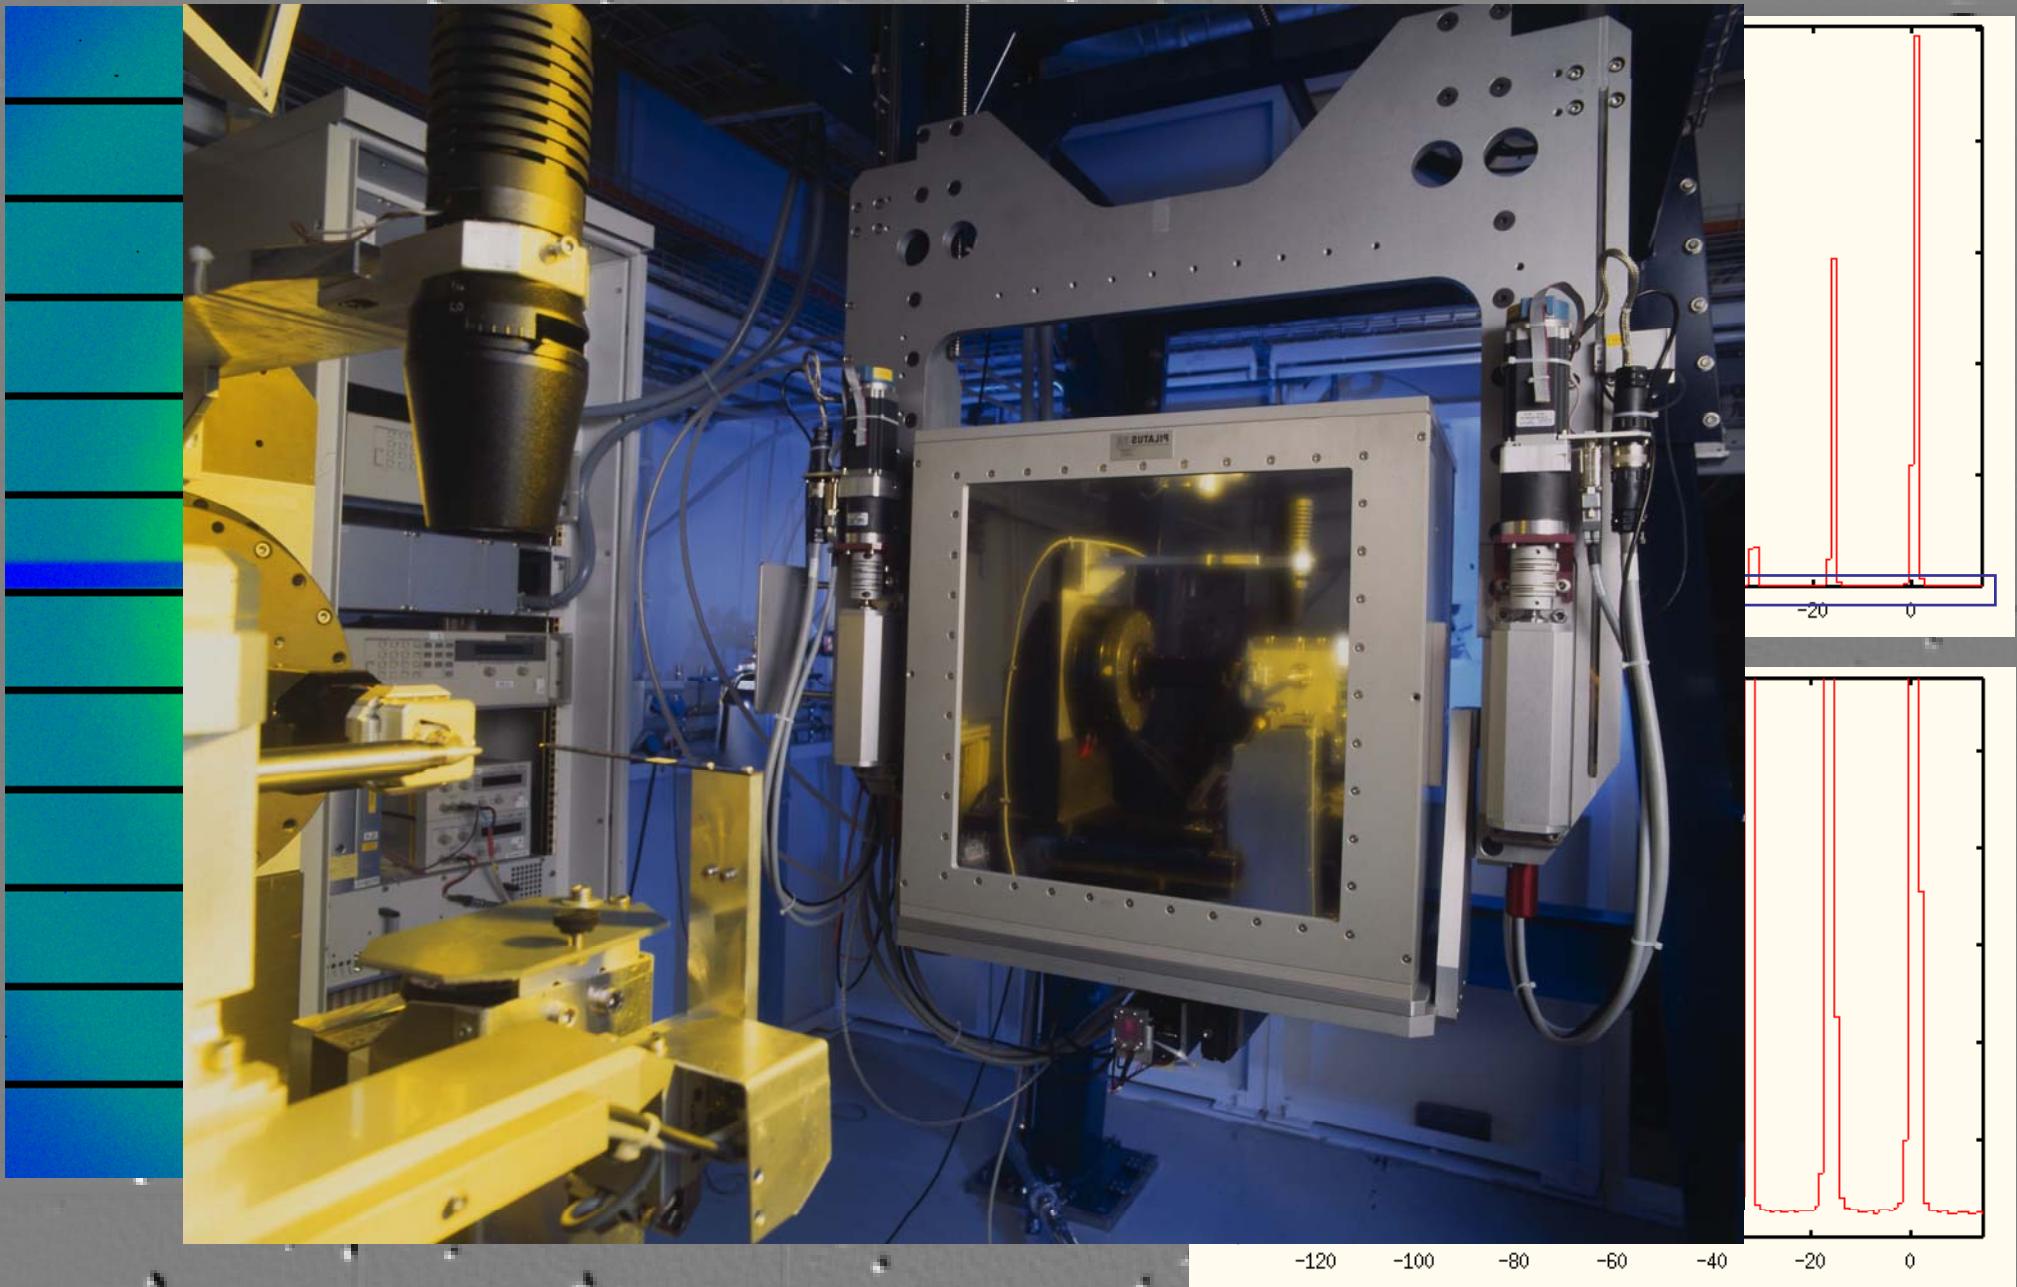

Modular System

No of Modules	60
Detector Size [mm]	431 x 448
Module Array	5 x 12
Format	6'224'001 pixels
Spatial resolution	0.172 x 0.172 mm ²
Dynamic range/pixel	20bits
Count rate/pixel	~3 MHz
Readout time	3.5 ms
Frame rate	12.5 Hz
Power consumption	500 W
Operating temperature	25°C
Dimensions [mm]	574 x 580 x 402
Weight Approx.	95 kg

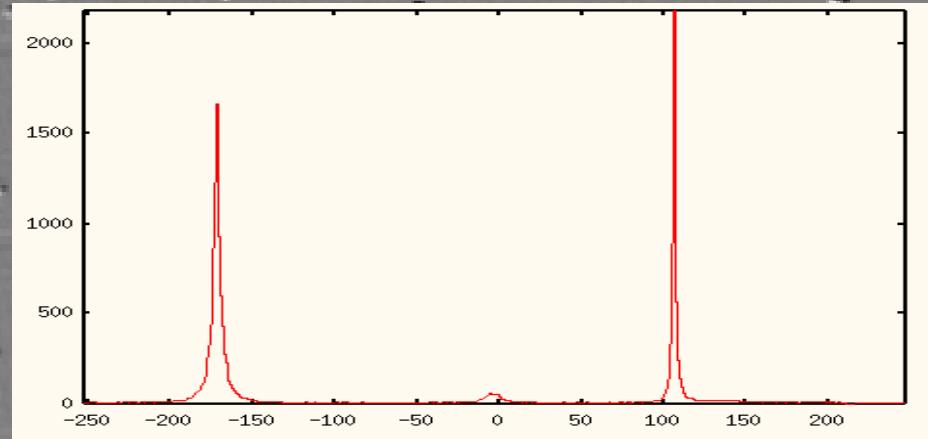

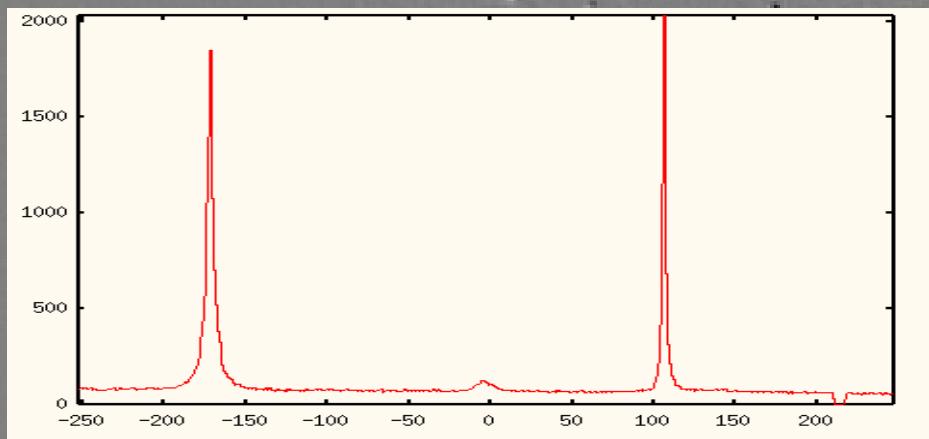

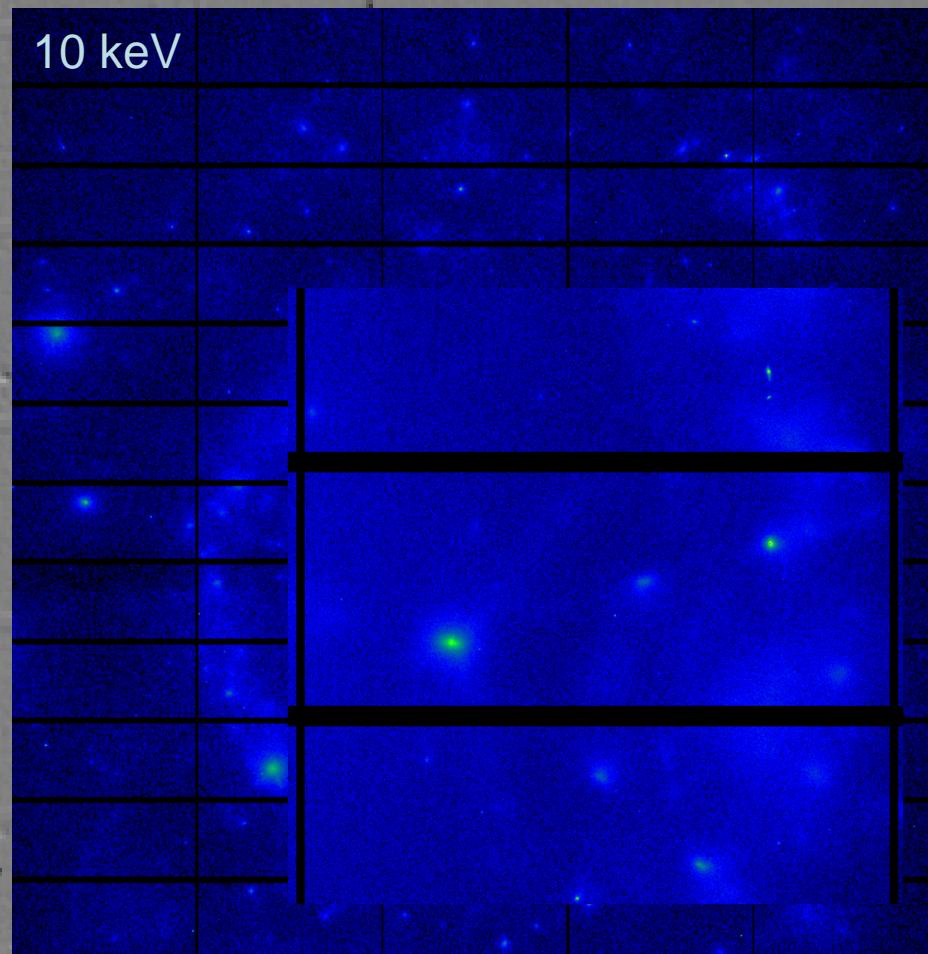

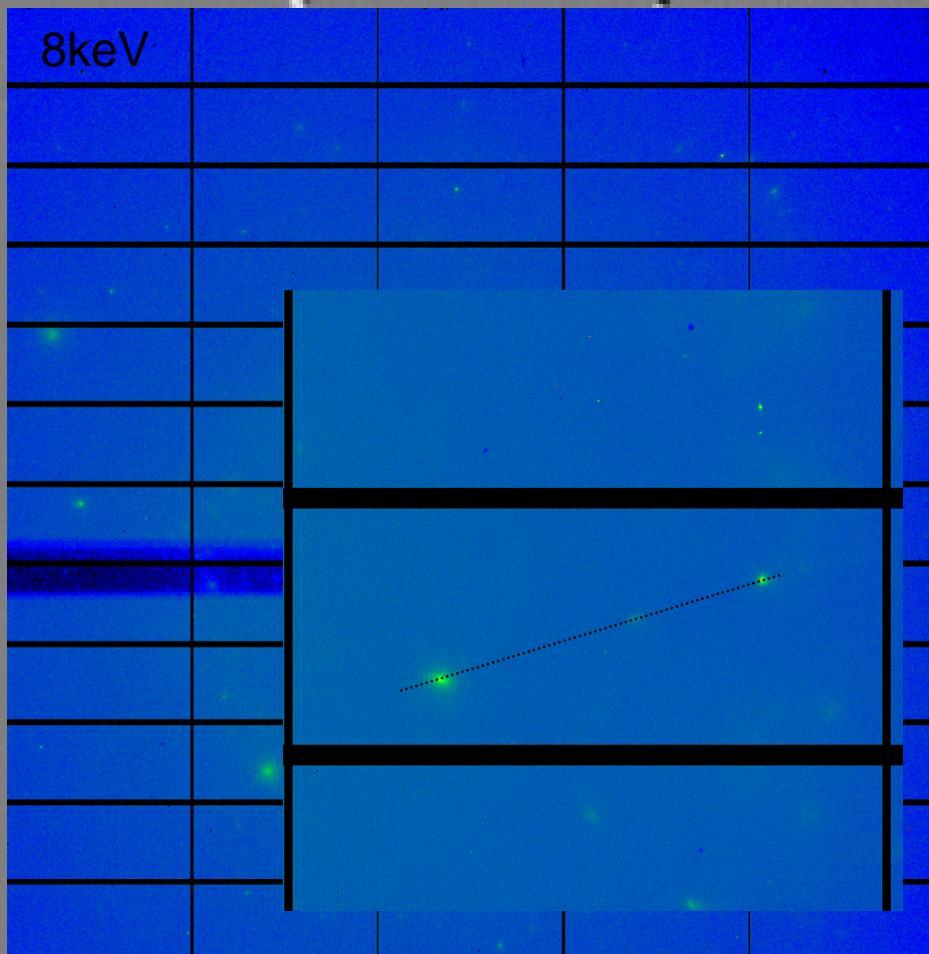

High Dynamic Range

30s Ribosome (R. Venki)

Threshold suppression

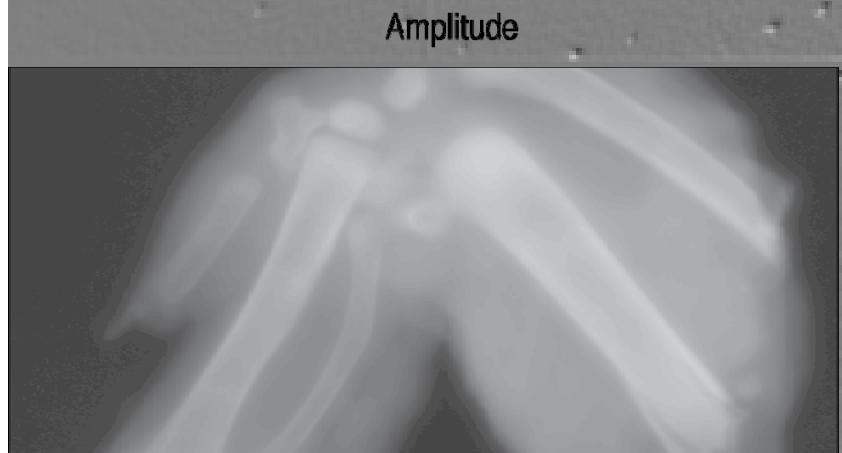

on Icosaedric AlCuFe- Quasicristal (W. Steurer)

Point Spread Function

Phase contrast imaging (F. Pfeiffer et.al.)

CCD (FLI IMG 1001)

PILATUS 100k

Phase contrast

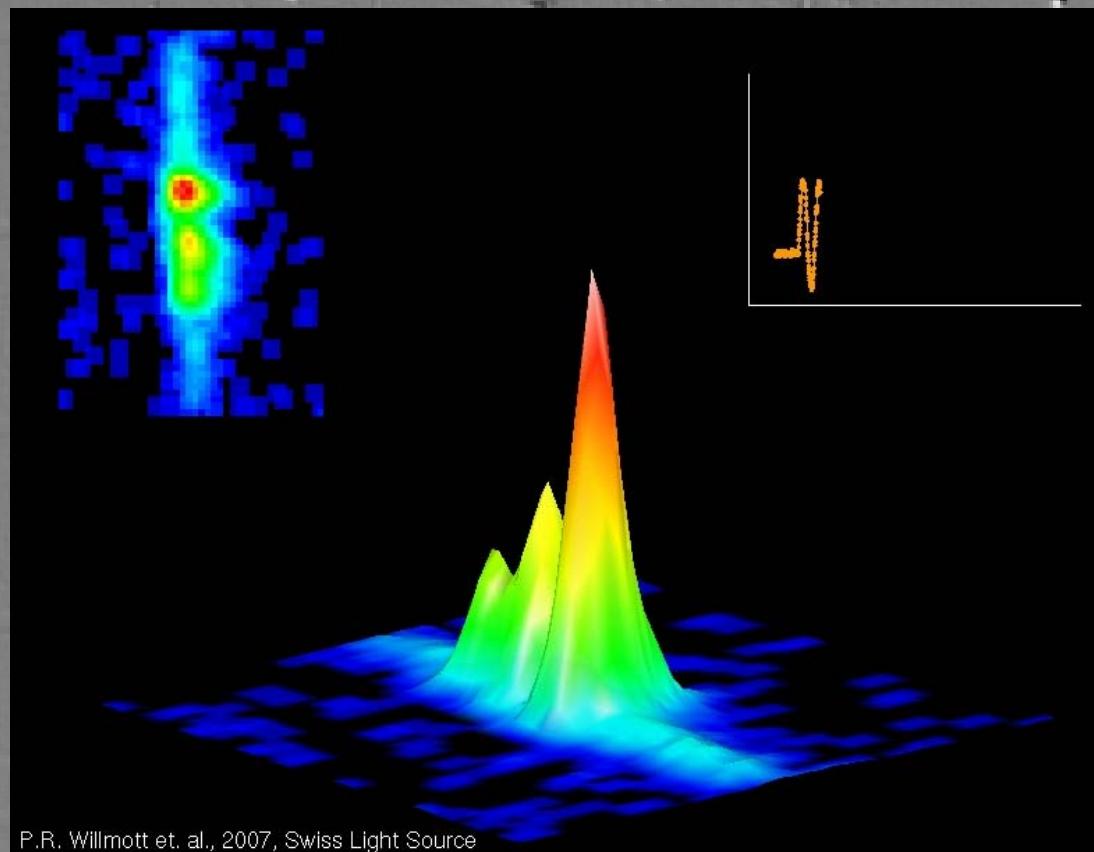

Phase contrast

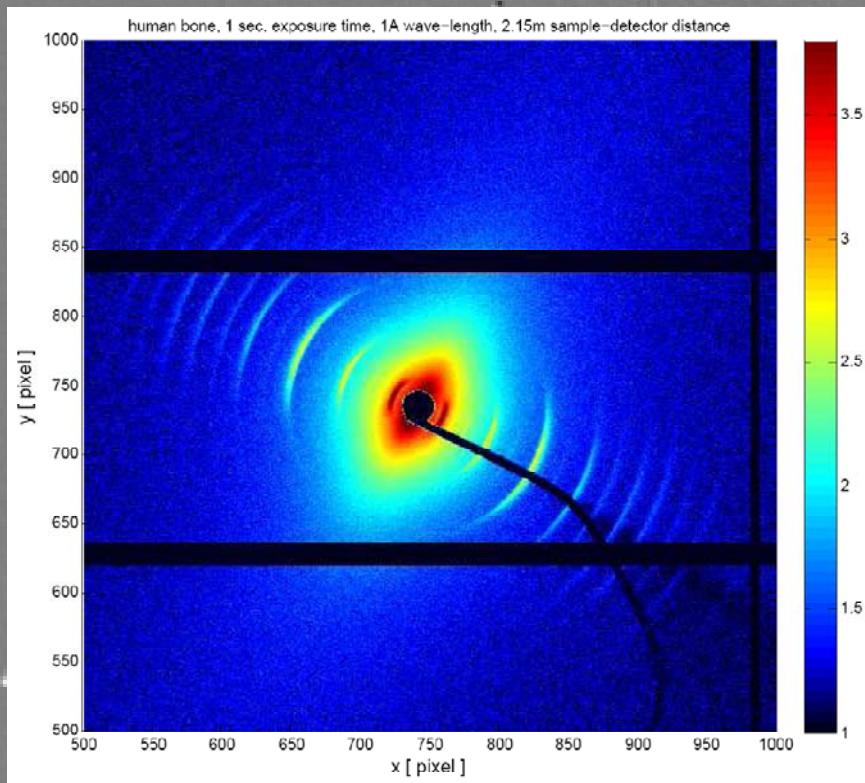

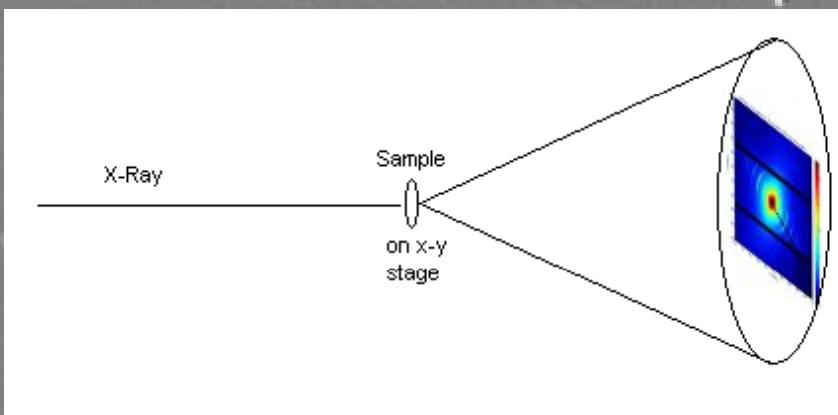

High Framing Rate

In situ thin Film growing (P. R. Willmott et.al.)

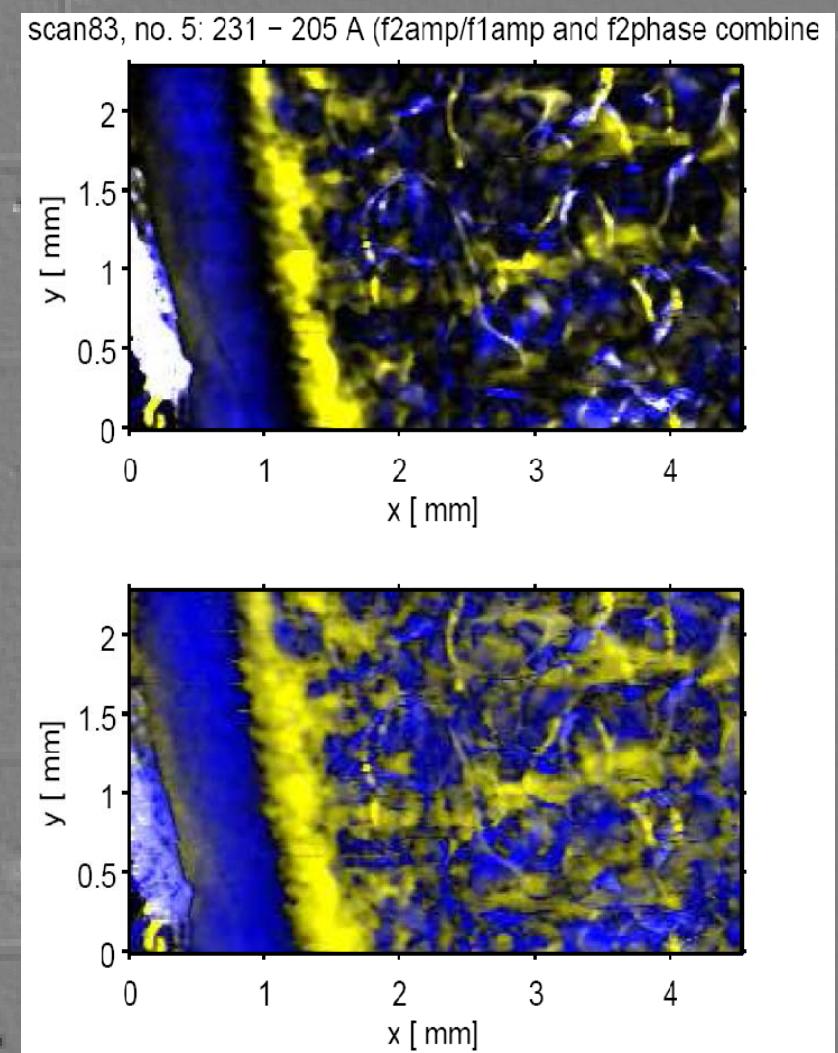

Fast Scan

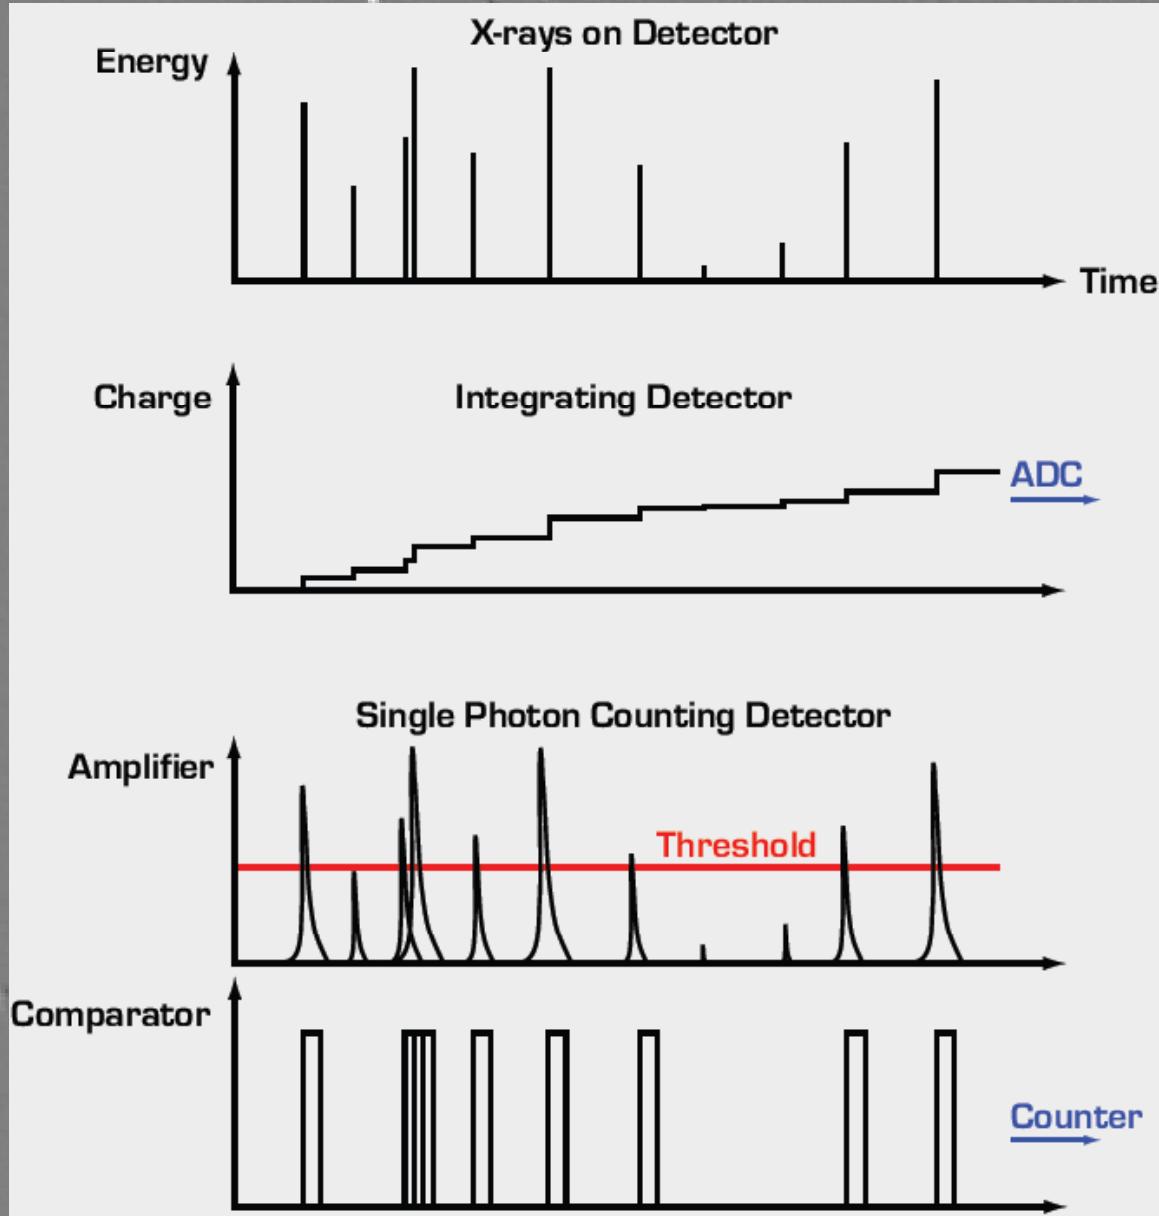

Human Patella small angle scattering scan (D. A. Bradley, O. Bunk)

Integrated Amplitude Composition
of 45'000 scan images

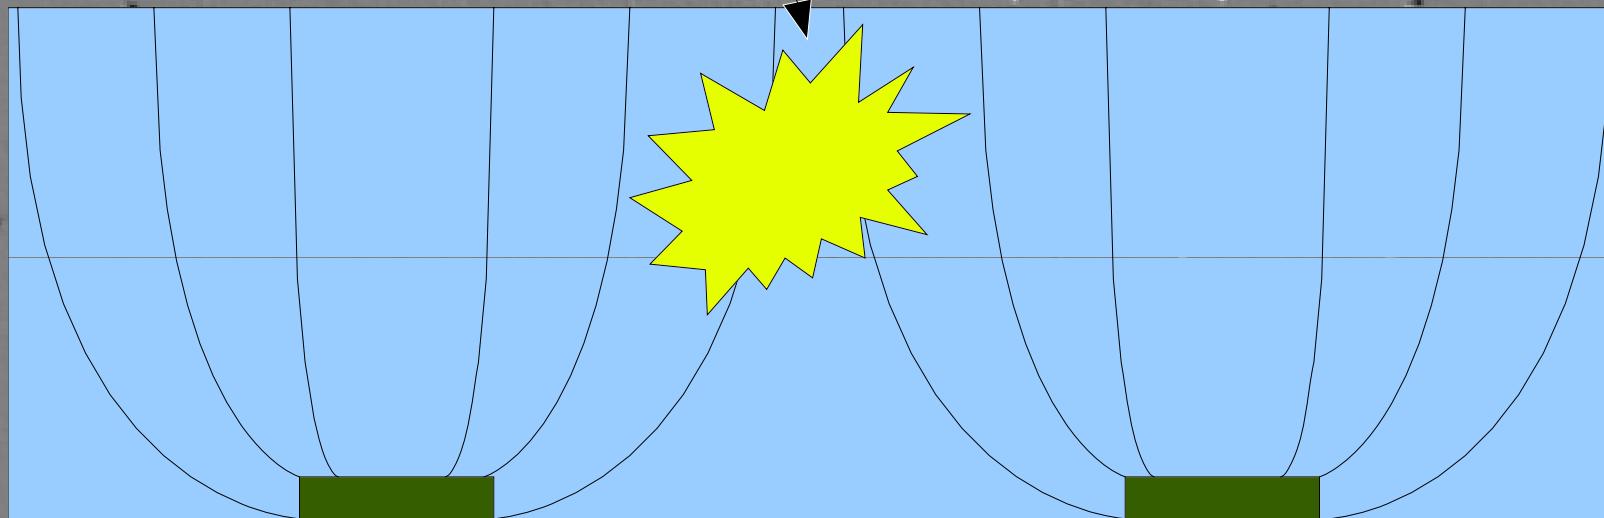

General Experience

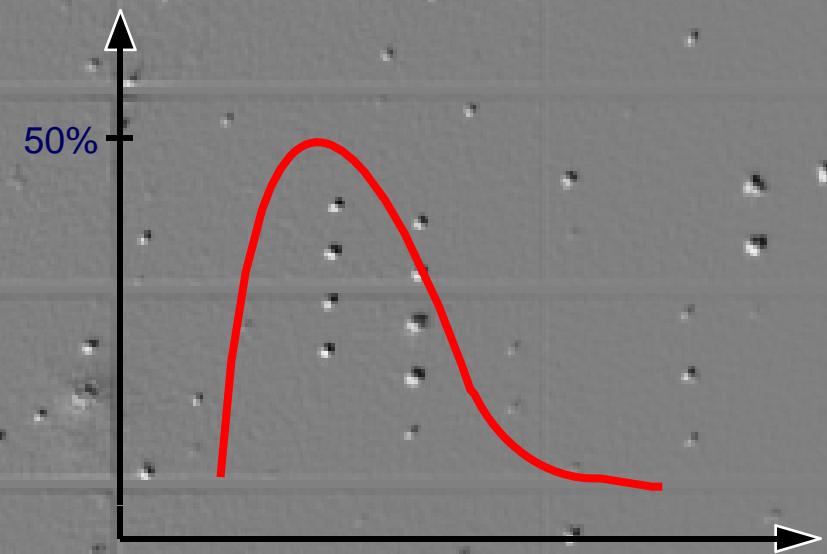

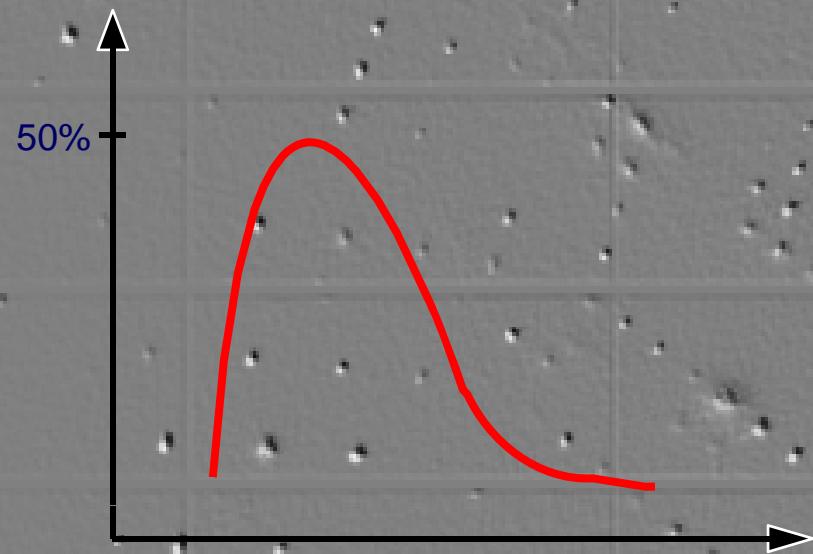

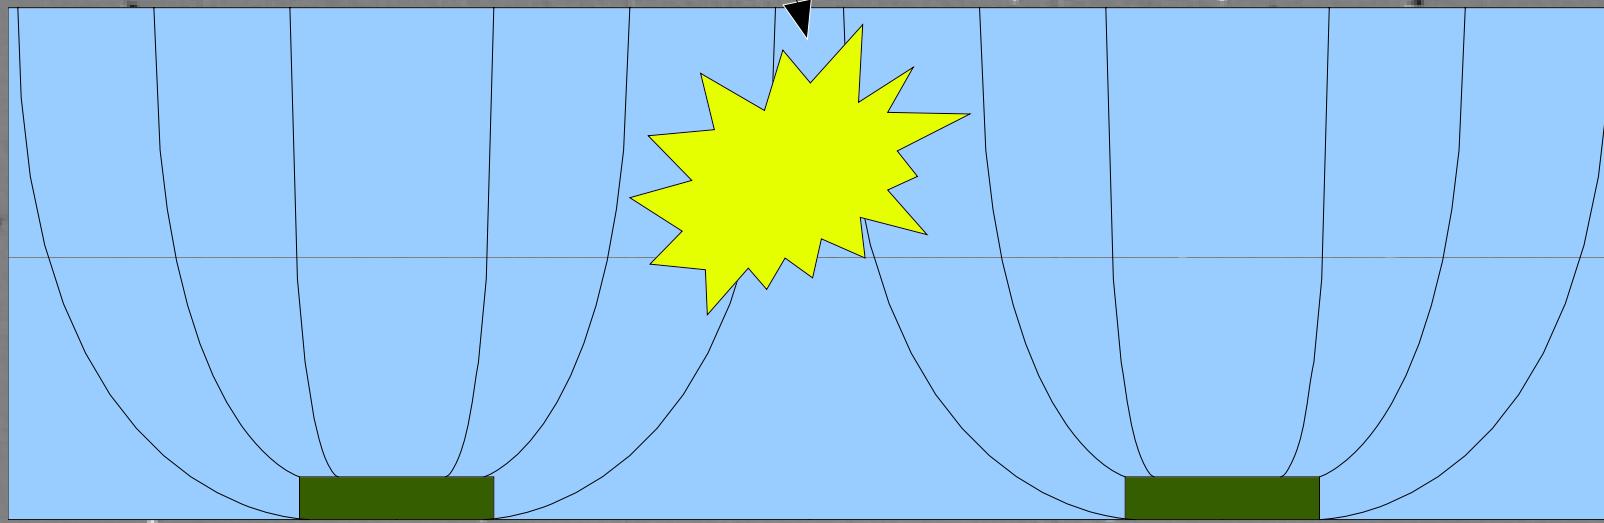

Apart from many advantages
two problems:

- Low energetic photons vs. charge shared high energetic photons.
- Natural limitation in counting speed. We can only count as fast as the preamplifier can resolve the incoming charge.
Paralization

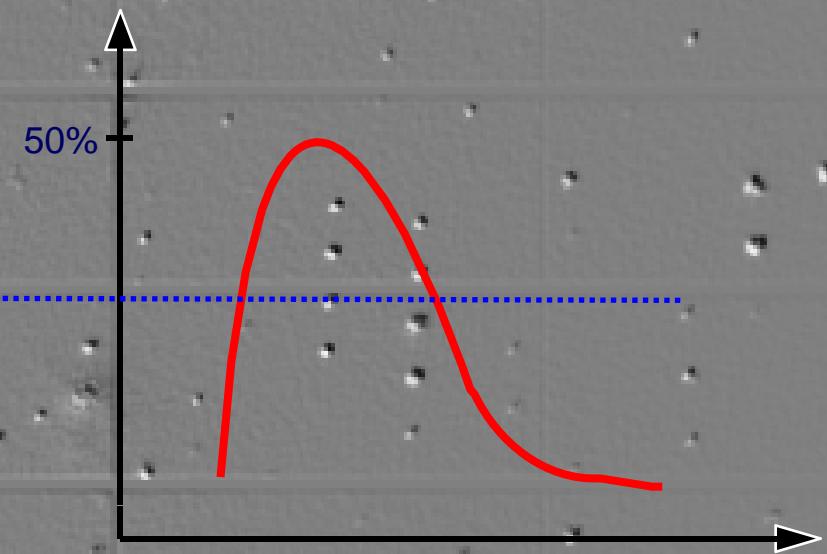

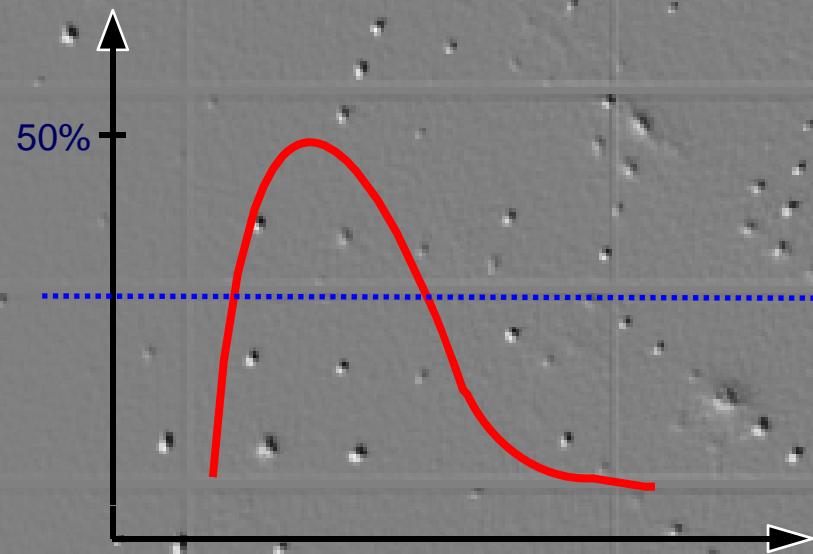

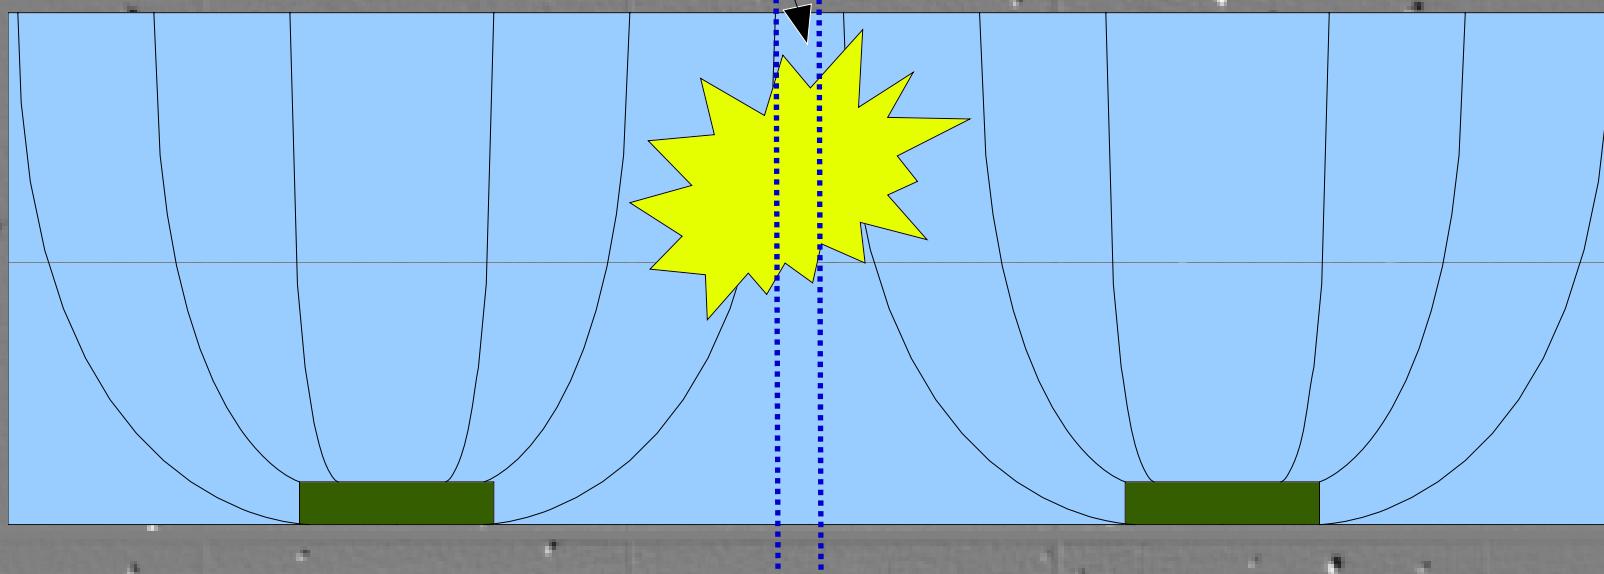

Charge Sharing and calibration

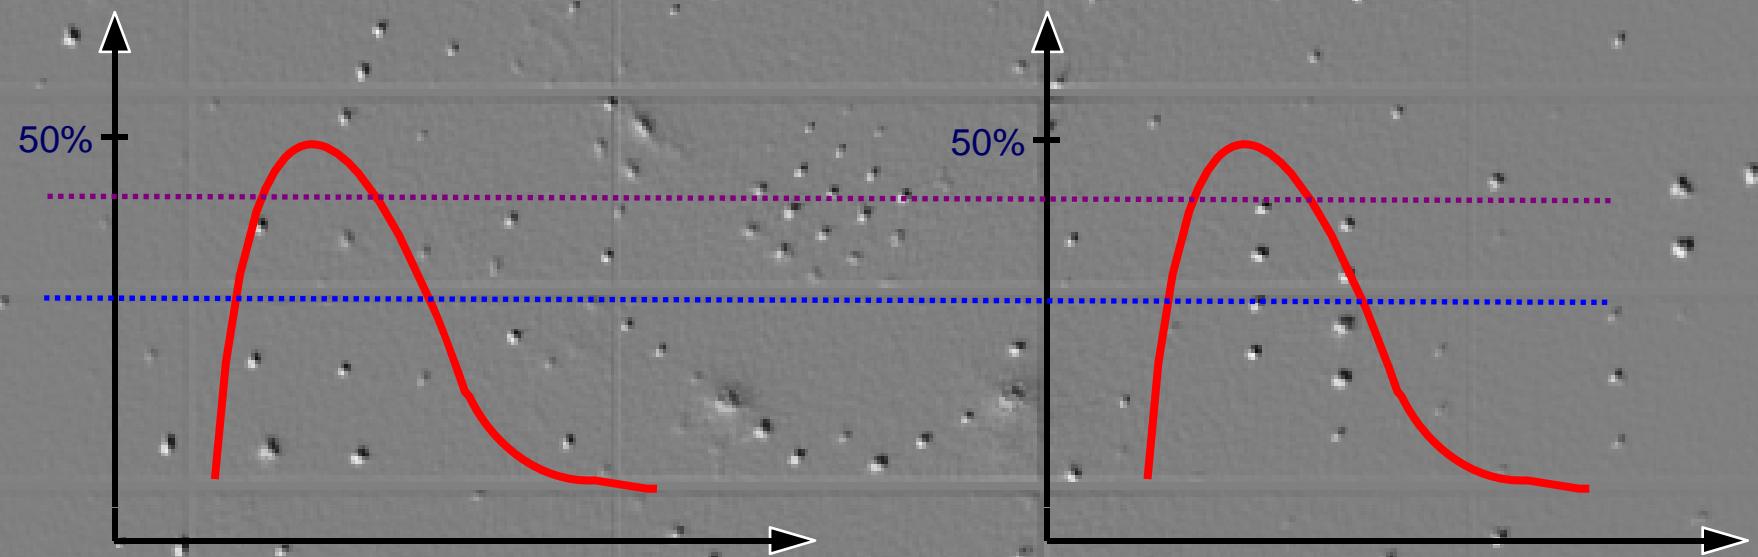

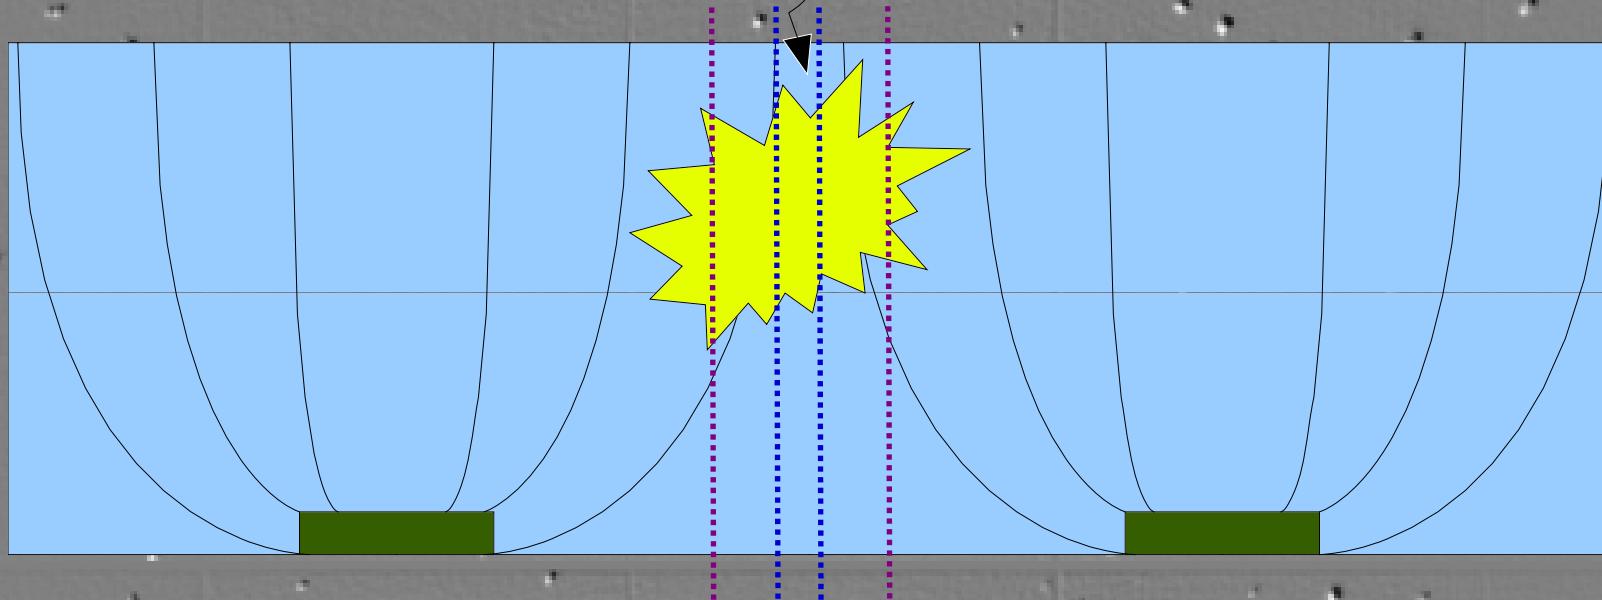

Charge Sharing and calibration

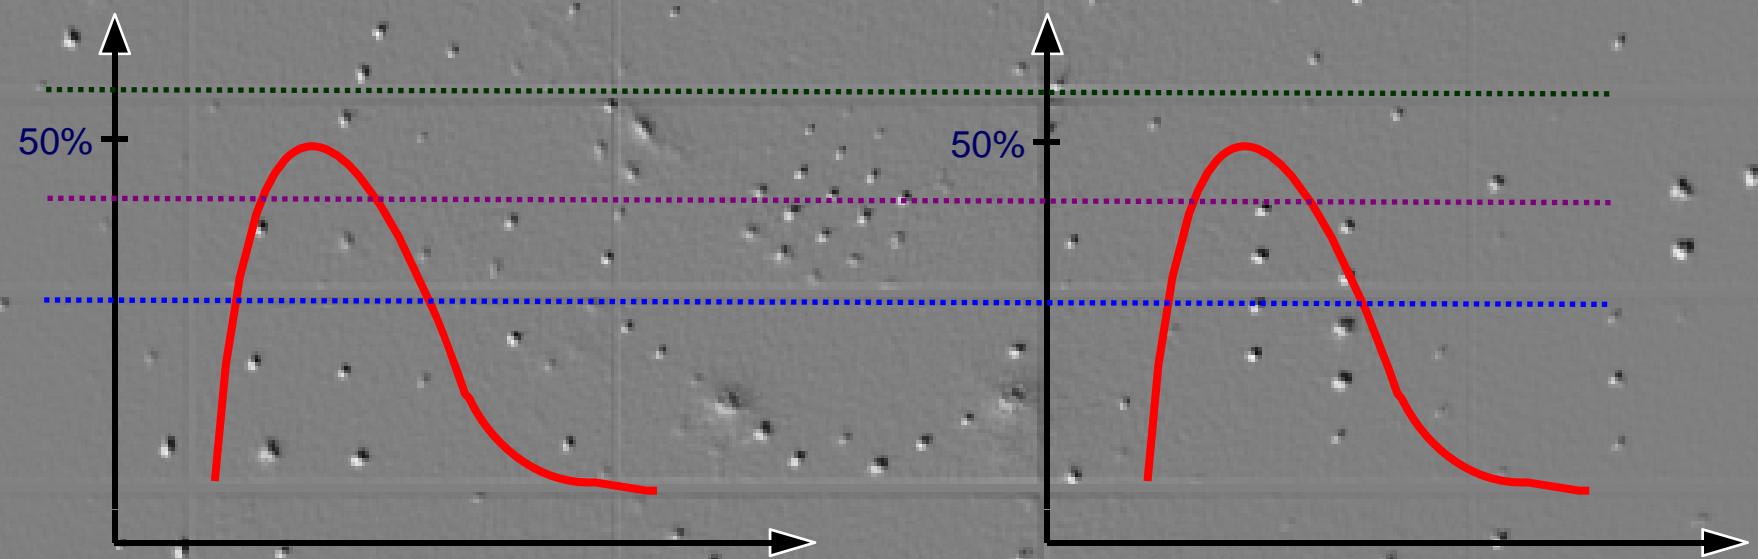

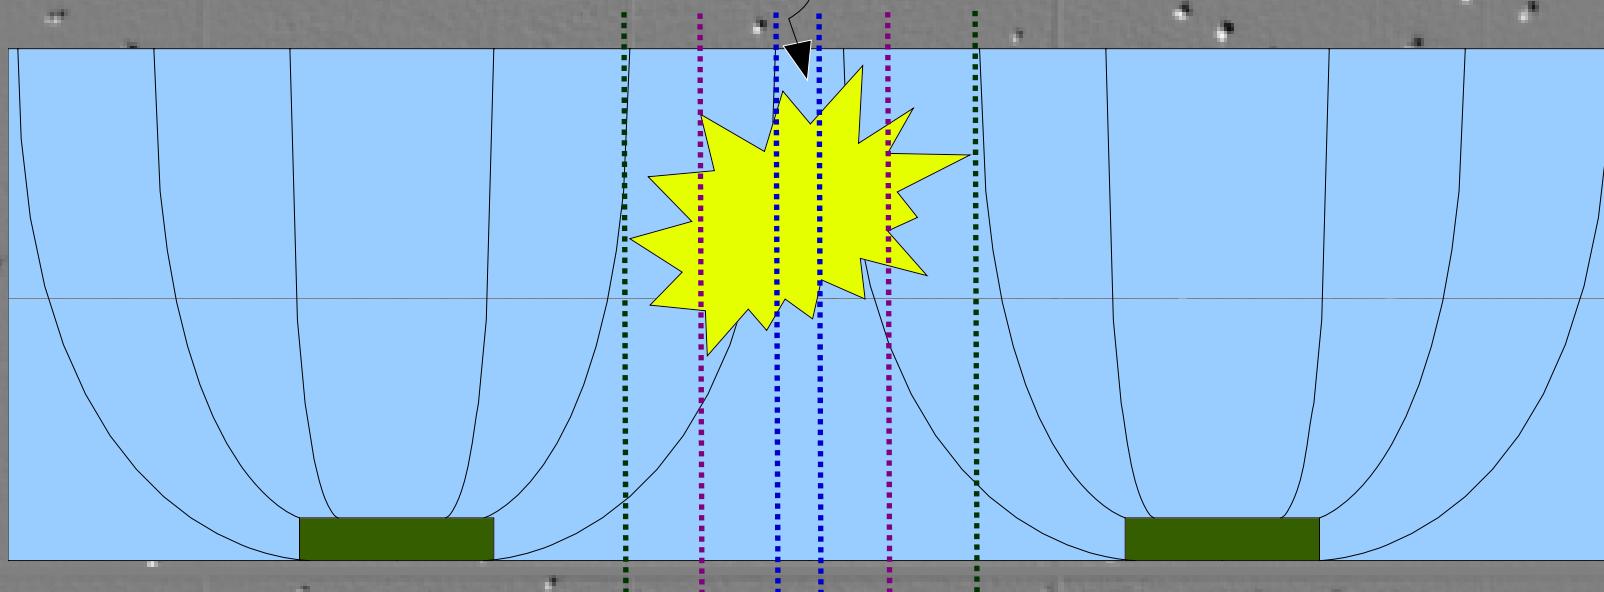

Charge Sharing and calibration

Charge Sharing and calibration

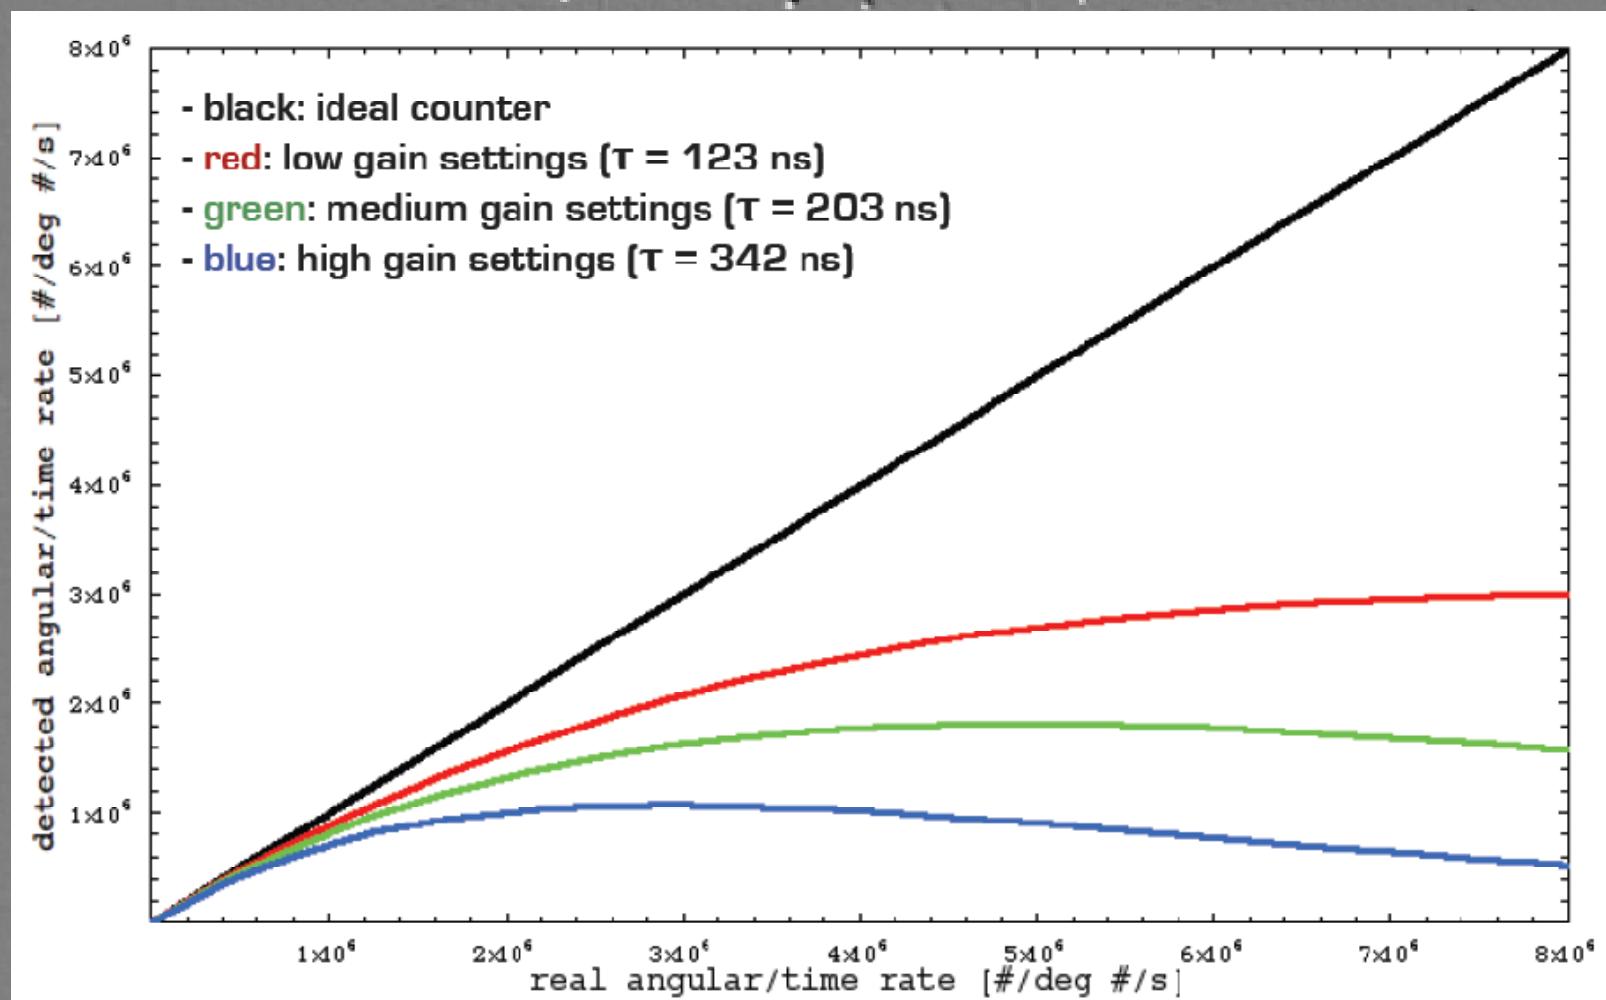

Charge Sharing and calibration

Paralyzable Counter

$$N_{\text{obs}} = N_{\text{real}} \times \exp[-N_{\text{real}} \times \tau]$$

Analyze Software

An underestimated item:

Having analyze software ready to process the PILATUS detector data when it is first delivered.

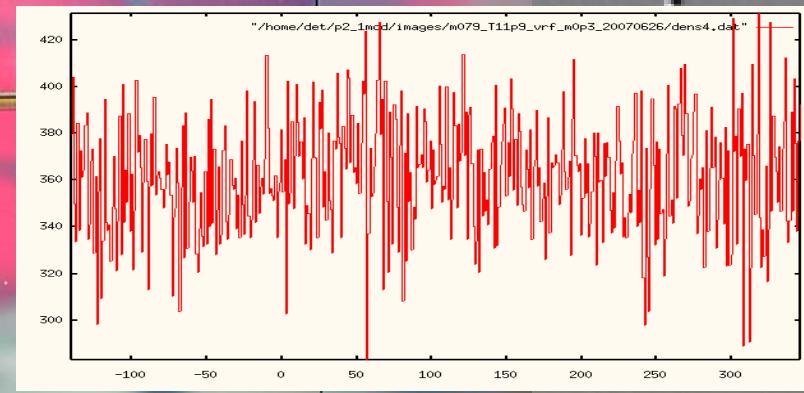

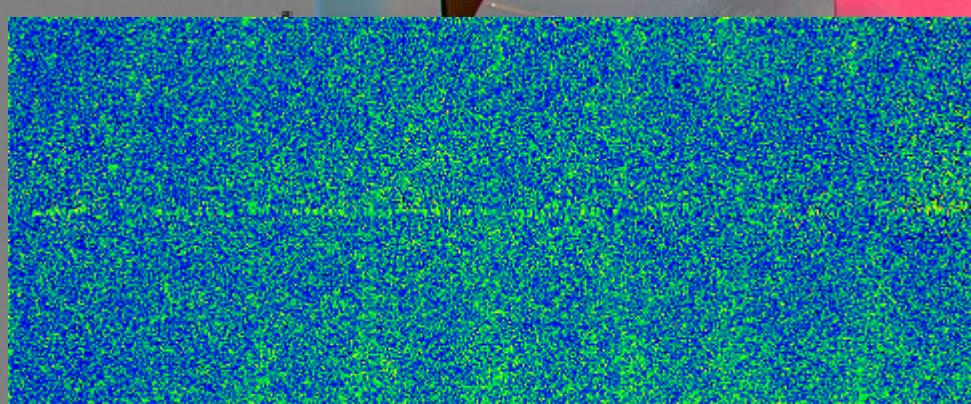

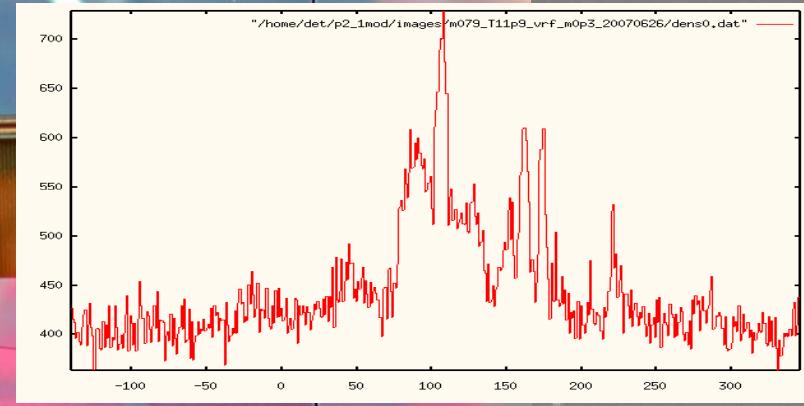

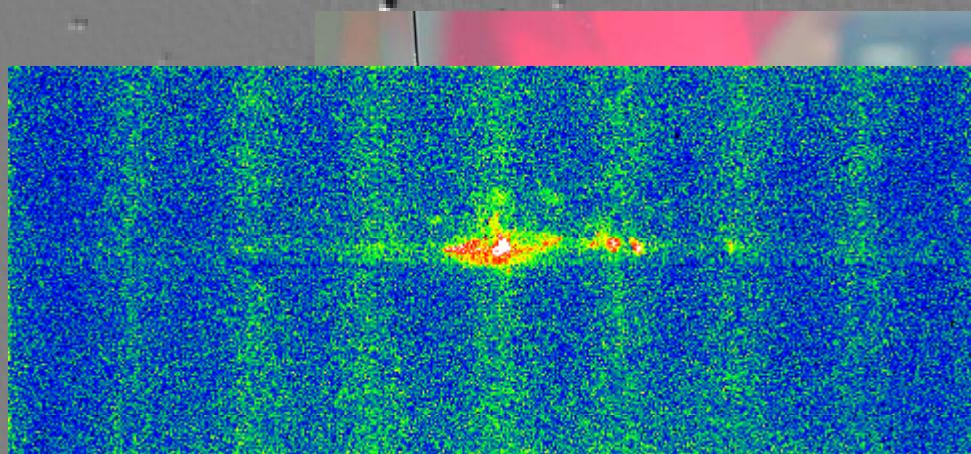

XDS (W. Kabsch): The only preprocessing software that completely incorporates the detector peculiarities. Freely available.

MOSFLM (A. Leslie): Can deal with the data format. No geometric corrections (distortion, parallax etc.). Not officially available.

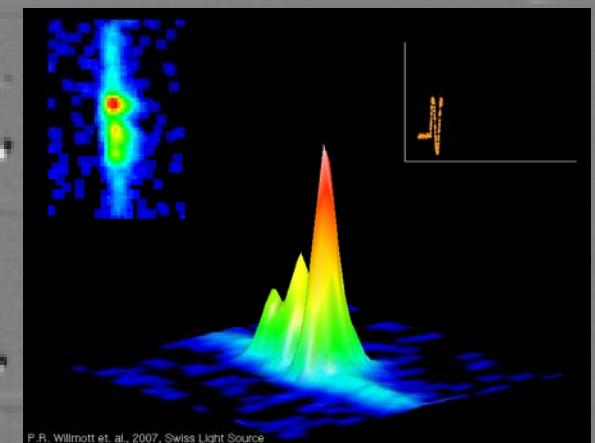

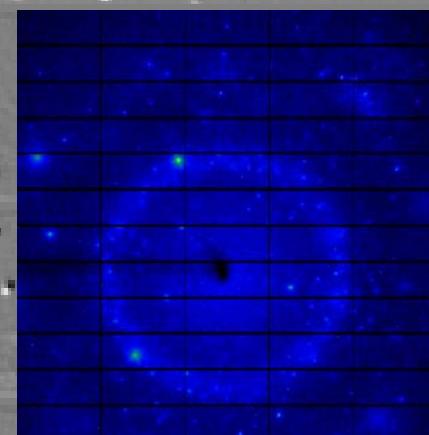

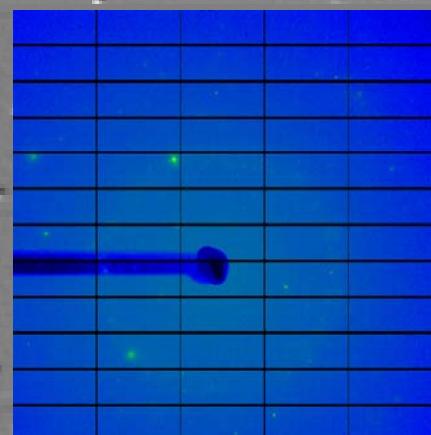

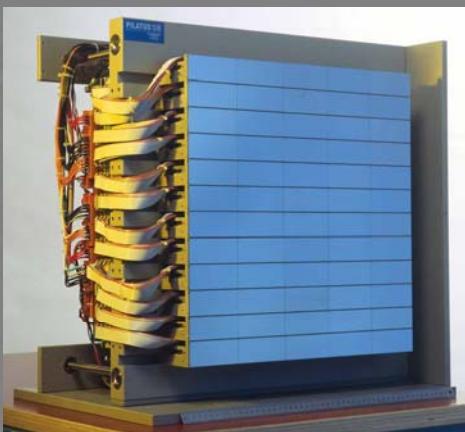

d*TREK (J. Pflugrath): Detector integration is underway. No geometric corrections (distortion, parallax etc.) yet. Commercial software.

DENZO / HKL / HKL-2000 (W. Minor): Not yet compatible. This is the widely spread software in that field. Commercial.

Mismanipulation

Summary

P.R. Willmott et. al., 2007, Swiss Light Source
