The NICA project at JINR Dubna

Thursday 25 July 2013 17:10 (20 minutes)

The NICA (Nuclotron-based Ion Collider fAcility) project is now under the realization stage at the Joint Institute for Nuclear Research (JINR, Dubna). The main goal of the project is an experimental study of hot and dense strongly interacting matter in heavy ion collisions at centre-of-mass energies $\sqrt{s_{NN}} = 4 - 11$ GeV (NN-equivalent) and the average luminosity of $10E27$ cm⁻² s⁻¹ for Au(79+) in the collider mode (NICA collider). In parallel, fixed target experiments at the upgraded JINR superconducting synchrotron Nuclotron are carried out with extracted beams of various nuclei species up to Au(79+) with maximum momenta 13 GeV/c (for protons). The project also foresees a study of spin physics with extracted and colliding beams of polarized deuterons and protons at the energies up to $\sqrt{s} = 26$ GeV (for protons). The proposed program allows to search for possible signs of the phase transitions and critical phenomena as well as to shed light on the problem of nucleon spin structure. General design and construction status, physical program of the NICA complex is presented.

Primary authors: Prof. KOVALENKO, Alexander (Joint Institute for Nuclear Research); Prof. SORIN, Alexander (Joint Institute for Nuclear Research); Prof. TRUBNIKOV, Grigory (Joint Institute for Nuclear Research, Dubna); Prof. MESHKOV, Igor (Joint Institute for Nuclear Research); Prof. LEDNICKY, Richard (Joint Institute for Nuclear Research, Dubna, Russia); Prof. MATVEEV, Viktor (Joint Institute for Nuclear Research); Prof. KEKELIDZE, Vladimir (Joint Institute for Nuclear Research)

Presenters: Prof. SORIN, Alexander (Joint Institute for Nuclear Research); Prof. KEKELIDZE, Vladimir (Joint Institute for Nuclear Research)

Session Classification: Future
