

The Tracking Tools Evolution Task Force (TrackTools TF)

Maria Dimou / CERN

2012/09/24

Who We Are

Developers, experts, deployers, team members of:

- GGUS (representing also TrackTools of the T0,T1s)
- Savannah
- Trac
- Jira
- The LHC experiments

The above list was a conclusion of the TEG Operations WG2 ([Document here](#)).

What We Do within WLCG Ops

- Discuss development options for each tool and interfaces between them, when required.
- Periodically present status reports at the fortnightly WLCG Operations meeting.
- Propose timelines for features' / fixes' entry in operation at the same meeting, to get agreement from the community.

How We Proceed

- GGUS: Weekly tel. meetings of the dev. Team are in place for the last 5 years and work well. They cover interface issues with the T0,T1s' TrackTools and the future of the existing savannah-ggus bridge.
- Savannah, Trac, Jira: Their future and deployment information for WLCG will be discussed f2f between MariaDZ and the experts and reported at the fortnightly.

Conclusion

- The TrackTools TF and the fortnightly WLCG Operations are a, much needed, formal forum to get community's feedback on development choices.
- Lets coordinate across TFs the practicalities (e-group & twiki names, presentation slots).
- Comments/suggestions are Very Welcome.
- Thank You for your attention!
