

APS AAHEP6 Update

Mark Doyle

November 15, 2011

CERN

New Submissions Server

- Continue to support direct submission from arXiv
- Collect information about all authors
 - Name
 - Email address
 - Institution/Affiliations
- New institutional database – based on Ringgold identifiers – bridge between subscribing institutions and authors/referees

ORCID

- APS an ORCID Launch Partner
- Launched on October 16
- ~350 APS users have added their ORCID ID to our editorial database, expect 1000 or more by end of year
- Still need to make a marketing push (waiting for some basic functionality to be filled out)

SCOAP3 and APS

- APS answered tender offer
- CC-BY license (like most, if not all, publishers)
- Several APS journals included in SCOAP3
 - Physical Review D – fully covered (Type 1)
 - Physical Review C – hybrid (Type 2)
- Physical Review Letters – not included (will continue to work with CERN though)
- Open questions: Metadata/data delivery, capturing arXiv information accurately

Data delivery

- Full text data delivery to INSPIRE and ADS
 - Using BagIt format for interchange
- Working with Mendeley and Microsoft Academic Live search

Miscellaneous

- APS was publisher of PDG's *Review of Particle Physics* this year
- PRX added to Web of Science indexing
- Delivery of arXiv id/DOI to arXiv (but not yet used by arXiv)
