Authors' information handling: EDP Sciences plans... and questions

Éléonore Jardillier (`jardillier@edpsciences.org`)
Jean-Paul Jorda (`jorda@edpsciences.org`)
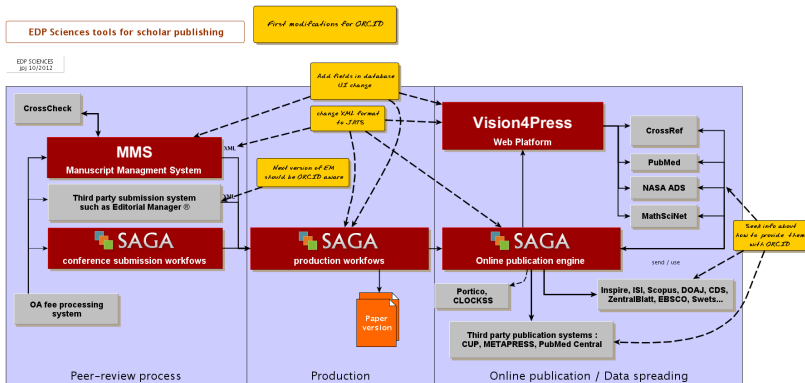

edp sciences

Publishing partner of the scientific communities

AAHEP6 Information Provider Summit
(CERN, 15-16 November 2012)

AJ : M. Ikoma (生駒大洋)[1,2] and Y. Hori (堀安範)[3]

A&A : Decision pending.

- Need works, but no big technical problems (thanks to unicode)
- Best handled with NISO JATS DTD
- Open question : what to do of these names, apart from displaying them ?
- Other question : is it a general trend ?

Short-term plan for ORCID integration

- Become an ORCID member
- Information meeting for EDP Sciences collaborators (end of november)
- Technical work in 2013
  - at least iD READY / iD LINKED / iD CAPABLE
  - DTD change to NISO JATS 1.O Publishing

EDP Sciences tools for scholar publishing

First modifications for ORC.ID

CUP, METAPRESS, PubMed Central

Peer-review process

Production

Online publication / Data spreading

ORCID related open questions

- Submission : ask the ORCID for all authors ? (what about large collaborations ?)
- Existing author's data : try to disambiguate ? Regular batch process based on author's orcid publication list ?
- Author's publication list updating :
  - develop API Tier 2 based functionnalities in our tools ?
  - let the authors do it themself through ORCID/CrossRef tools ?
- CrossRef plan for ORCID ?
- Something in the printed version ?
