

# ***US LHCNet Update***

**Dan Nae**

**California Institute of Technology**

# US LHCNet + ESnet (2007)

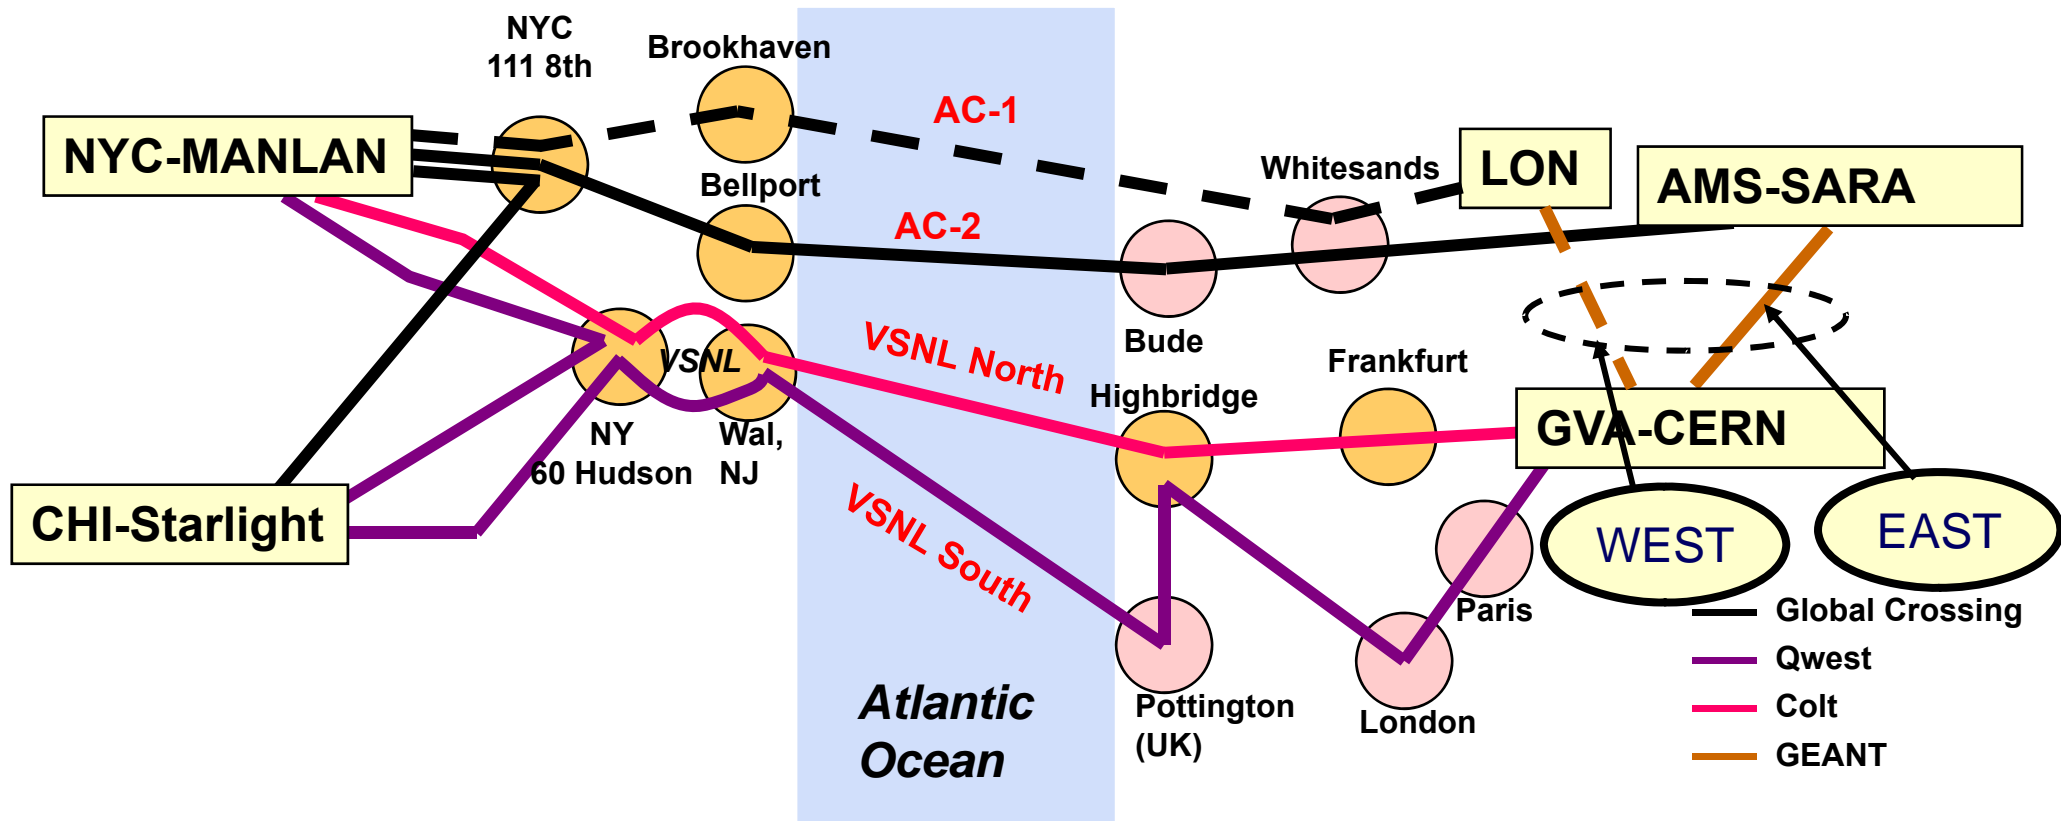

- Metropolitan Area Rings
- Major DOE Office of Science Sites
- Production IP ESnet core, 10 Gbps enterprise IP traffic
- SDNetwork core, 20-30-40-50
- Major international
- LHCNet Data Network
- NSF/IRNC circuit; GVA-AMS c

- ◆ Connections to ESnet Hubs in New-York and Chicago
- ◆ Redundant "light-paths" to BNL and FNAL
- ◆ Redundant 10 Gbps peering with Abilene
- ◆ Access to USNet/HOPI for R&D

# Multiple Fiber Paths: Reliability Through Diversity

- ◆ Four providers:
  - ◆ Colt
  - ◆ Qwest
  - ◆ Global Crossing
  - ◆ GEANT

**LCG Availability  
requirement: 99.95%**

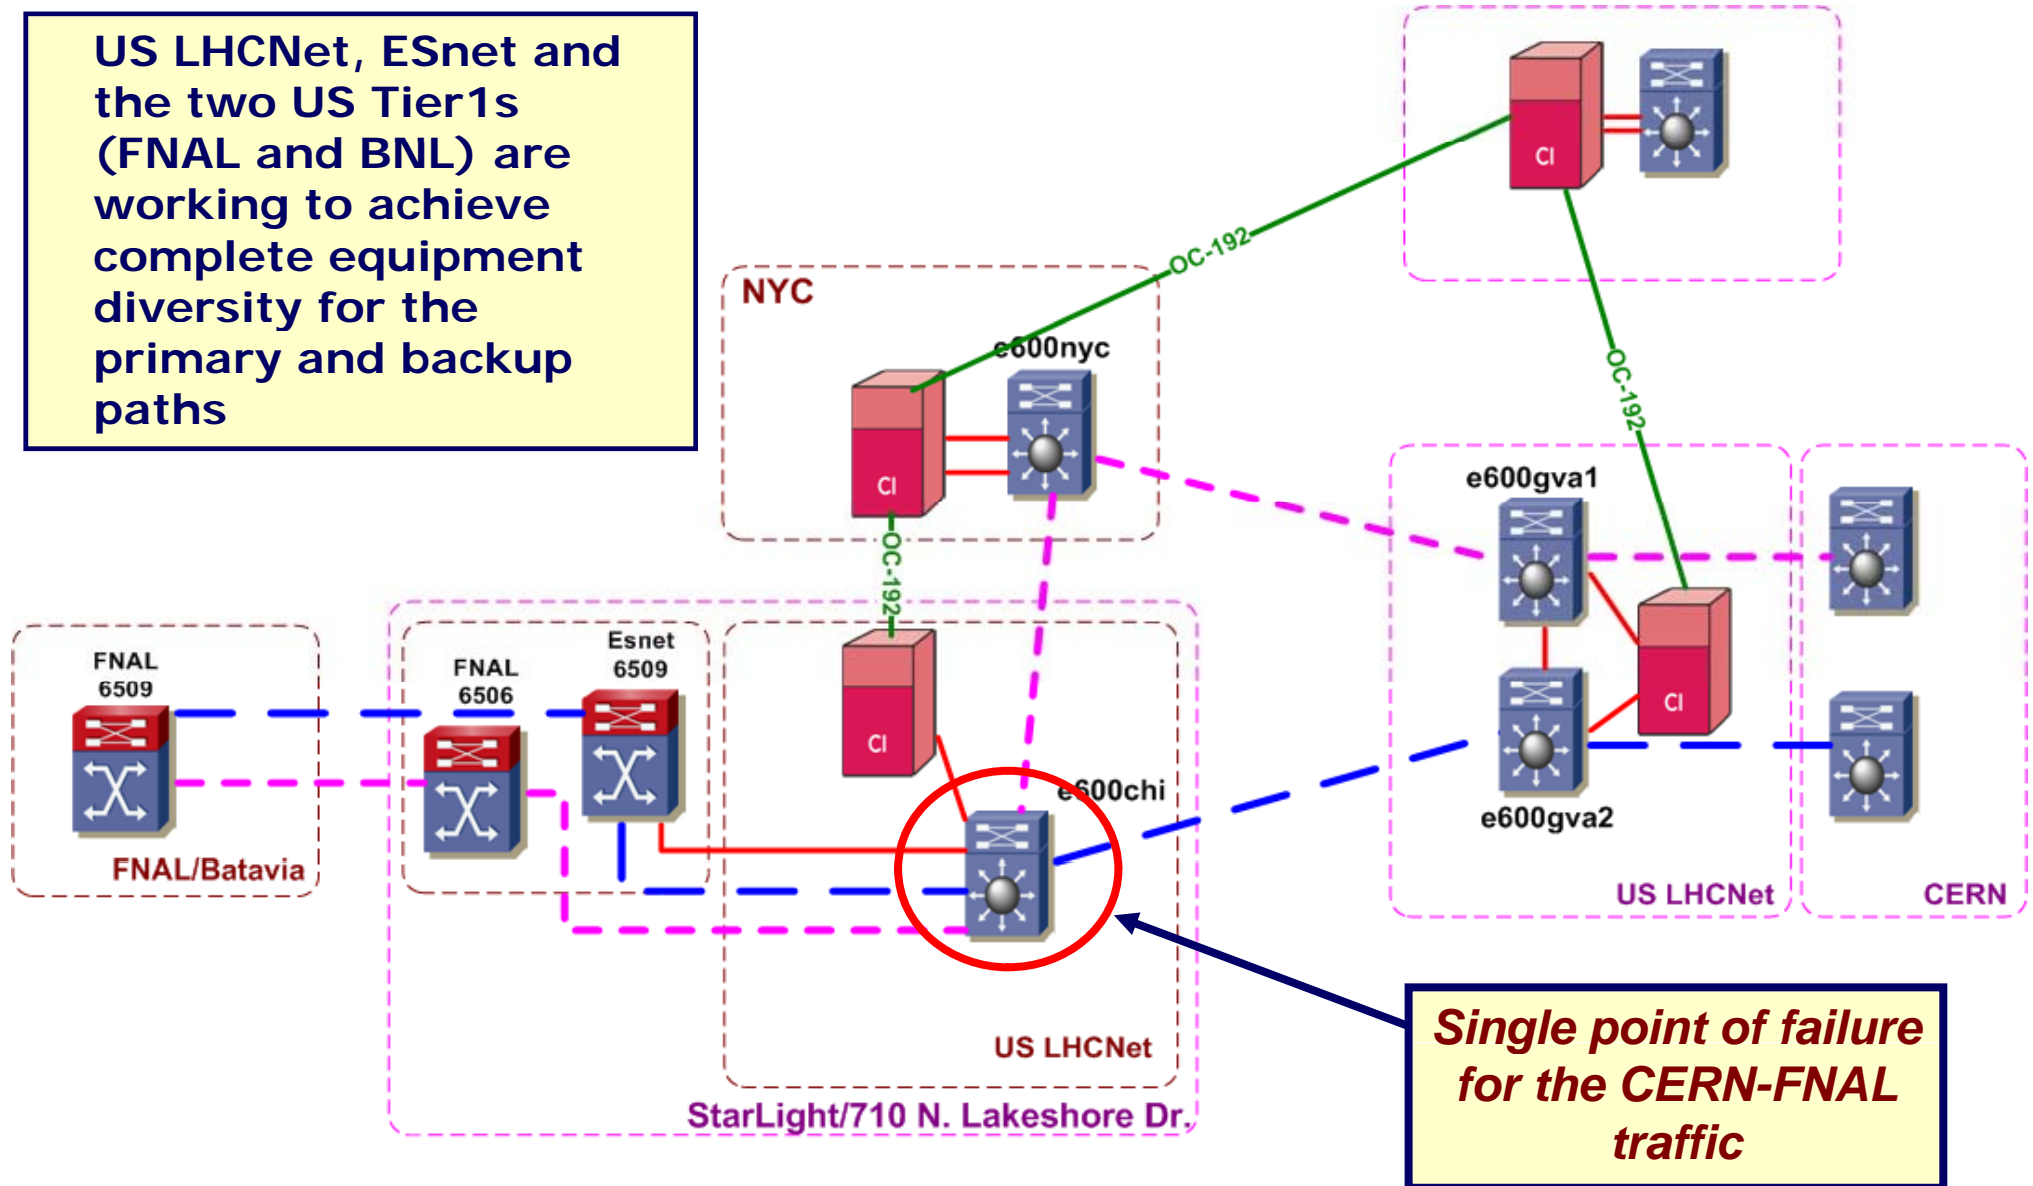

# Additional Slides

# Equipment Diversity

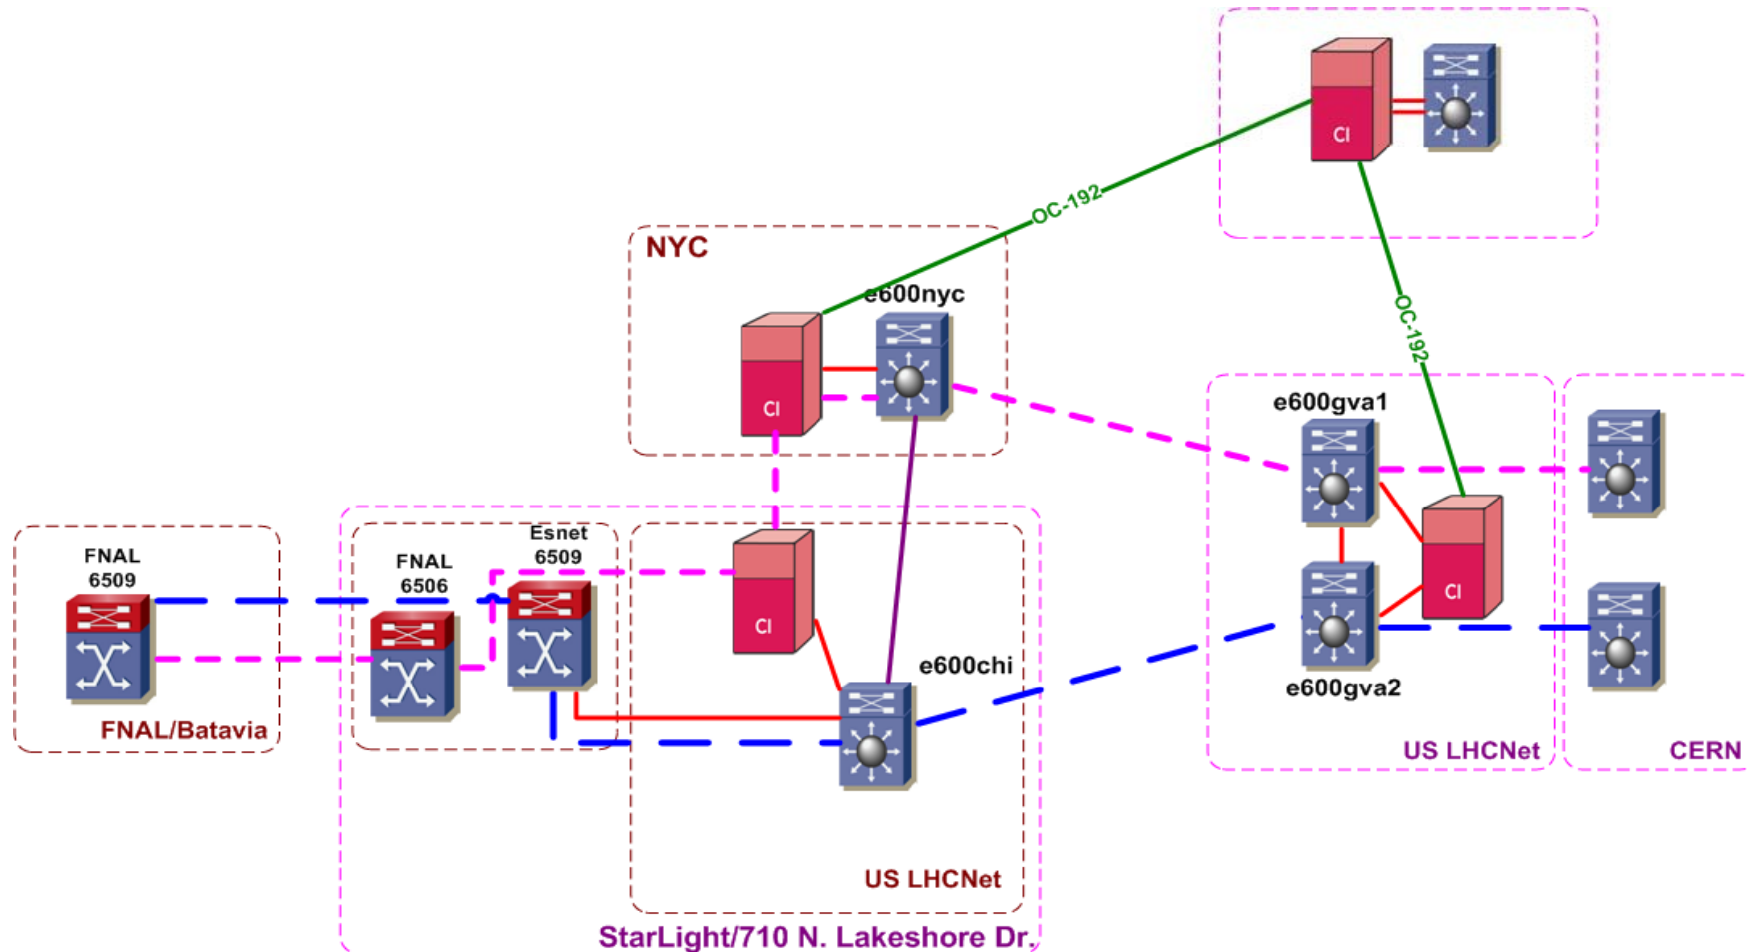

US LHCNet, ESnet and the two US Tier1s (FNAL and BNL) are working to achieve complete equipment diversity for the primary and backup paths

# Equipment Diversity (cont.)

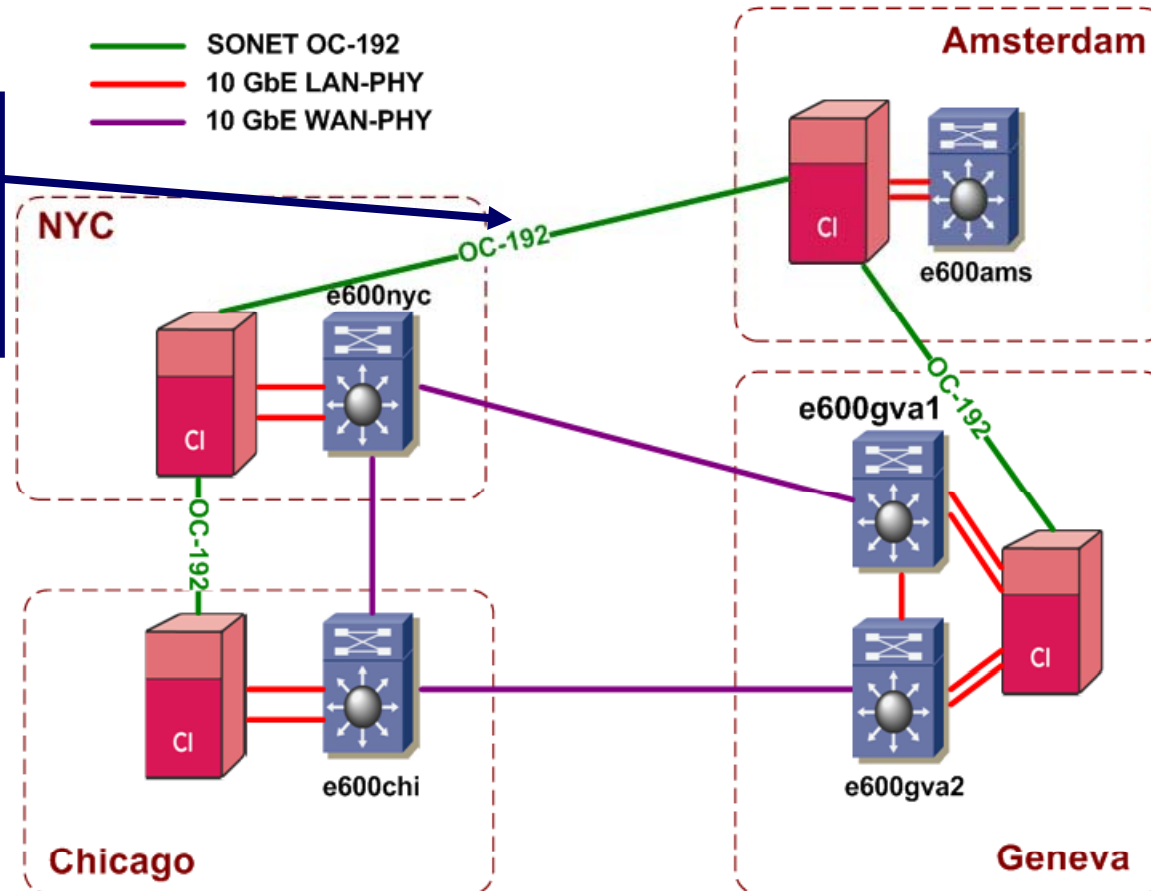

- ◆ The new setup allows for independent paths and can survive the failure of any single piece of equipment
- ◆ Great advantage in case of hardware or software maintenance
- ◆ Similar setup for the CERN-BNL connection

# Ciena Transitions (Today)

**GEANT-ESnet  
Peering, FNAL-  
GridKa, BNL-  
GridKa**

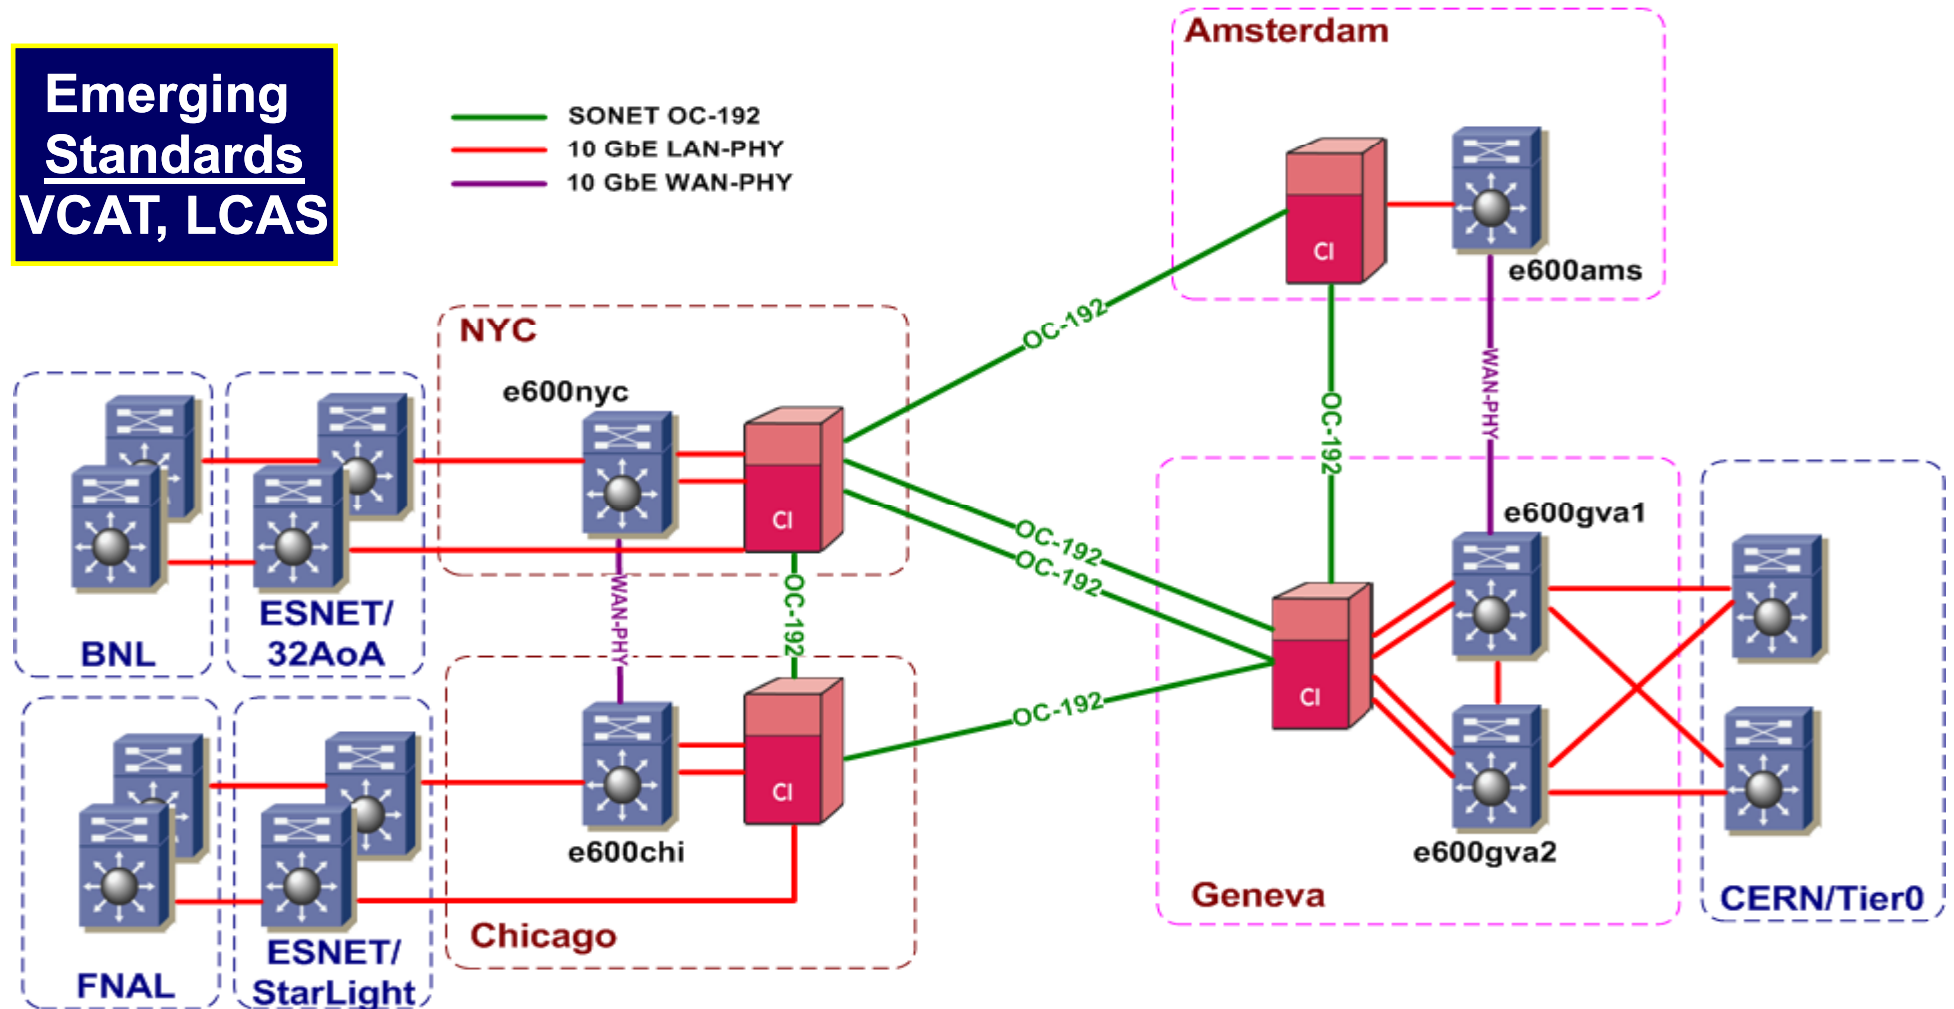

- ◆ Two parallel networks, one Force10 and one Ciena
- ◆ Today the main links (CERN-BNL, CERN-FNAL) go over the Force10s (proven reliability, stable configuration)
- ◆ Circuit oriented services development for the Cienas

# Planned Configuration (2008)

**Emerging Standards**  
**VCAT, LCAS**

**Robust fallback at layer 1 + next-generation hybrid optical network:**  
***Dynamic* circuit-oriented network services with BW guarantees**

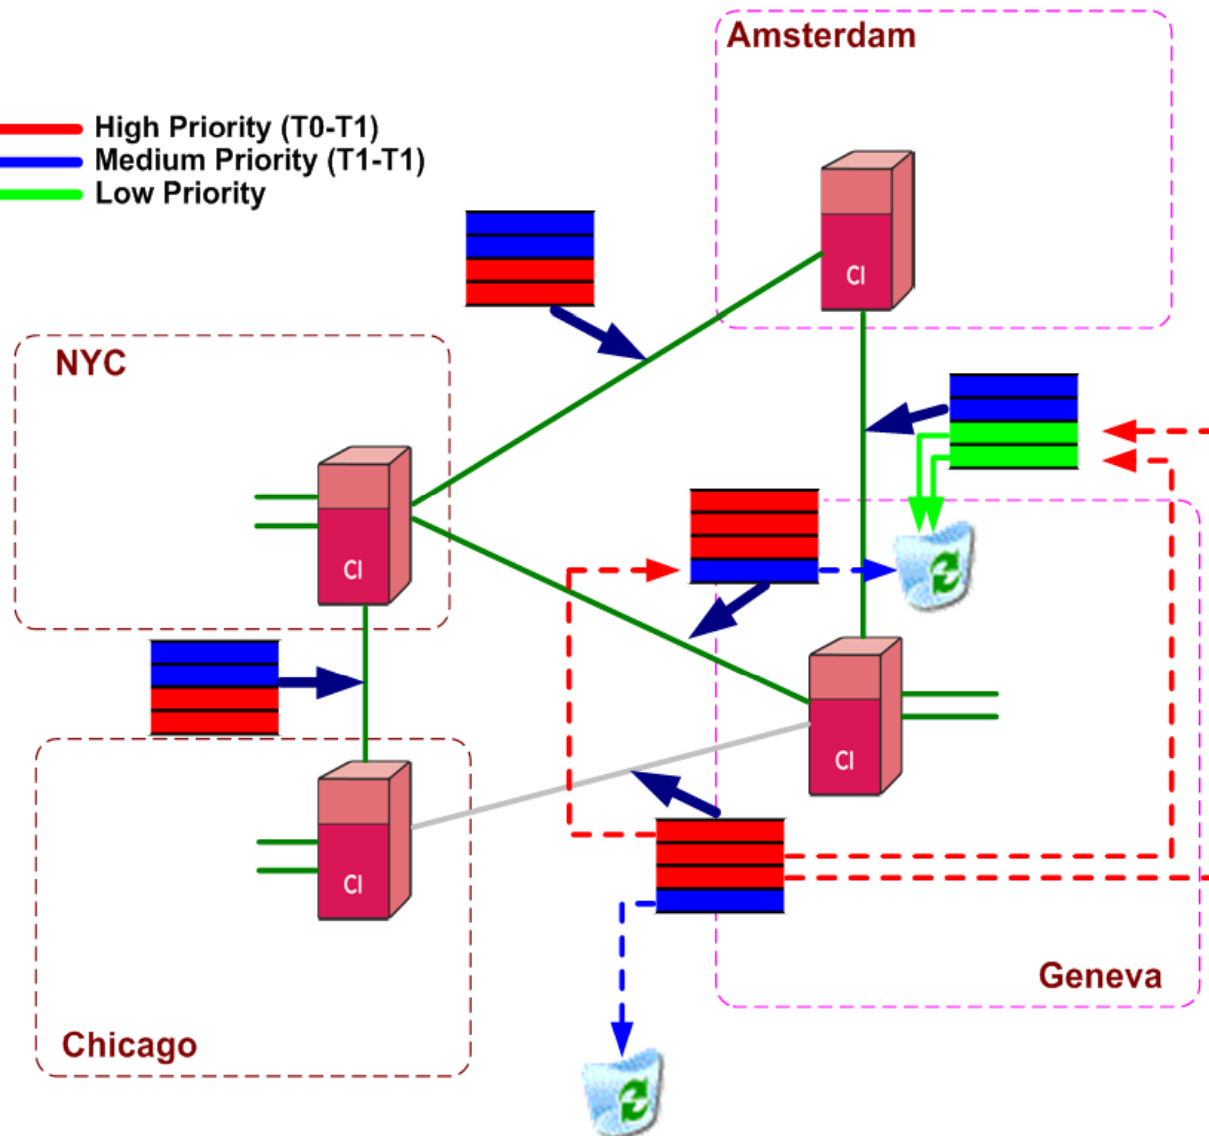

# Ciena “Mesh Restoration” of a Circuit

- High Priority (T0-T1)
- Medium Priority (T1-T1)
- Low Priority

Provisioned circuits over a failed SONET link can be re-routed according to priorities and preempt lower priority circuits.

Fallback is automatic and very fast

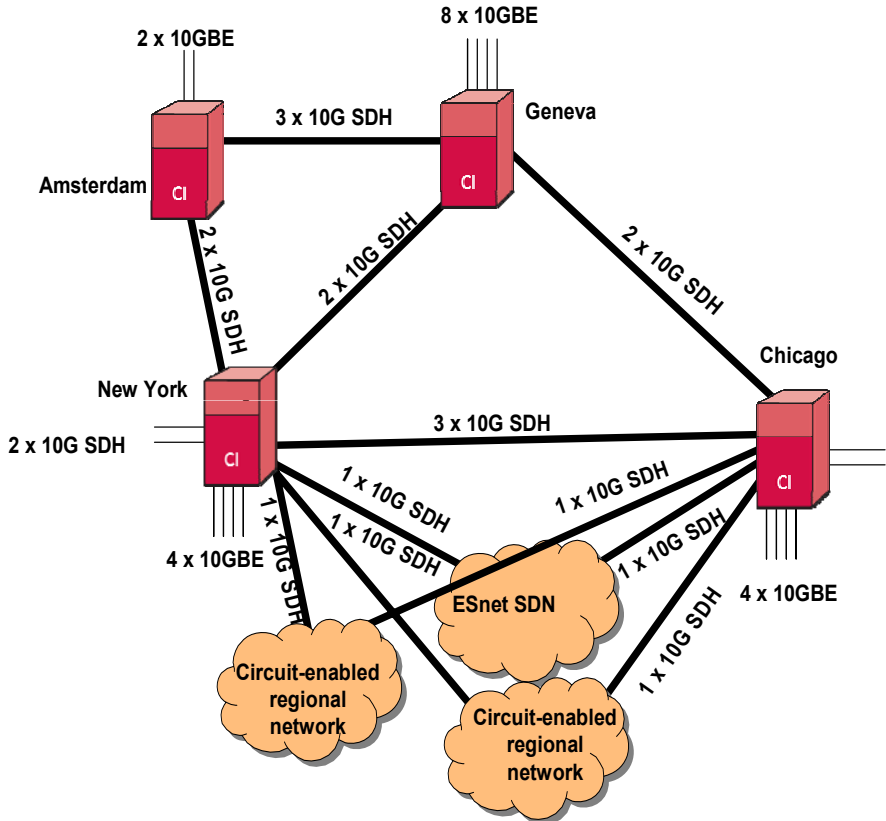

(<50ms once failure is detected)

# Network Forecast

**2009**

**2010**

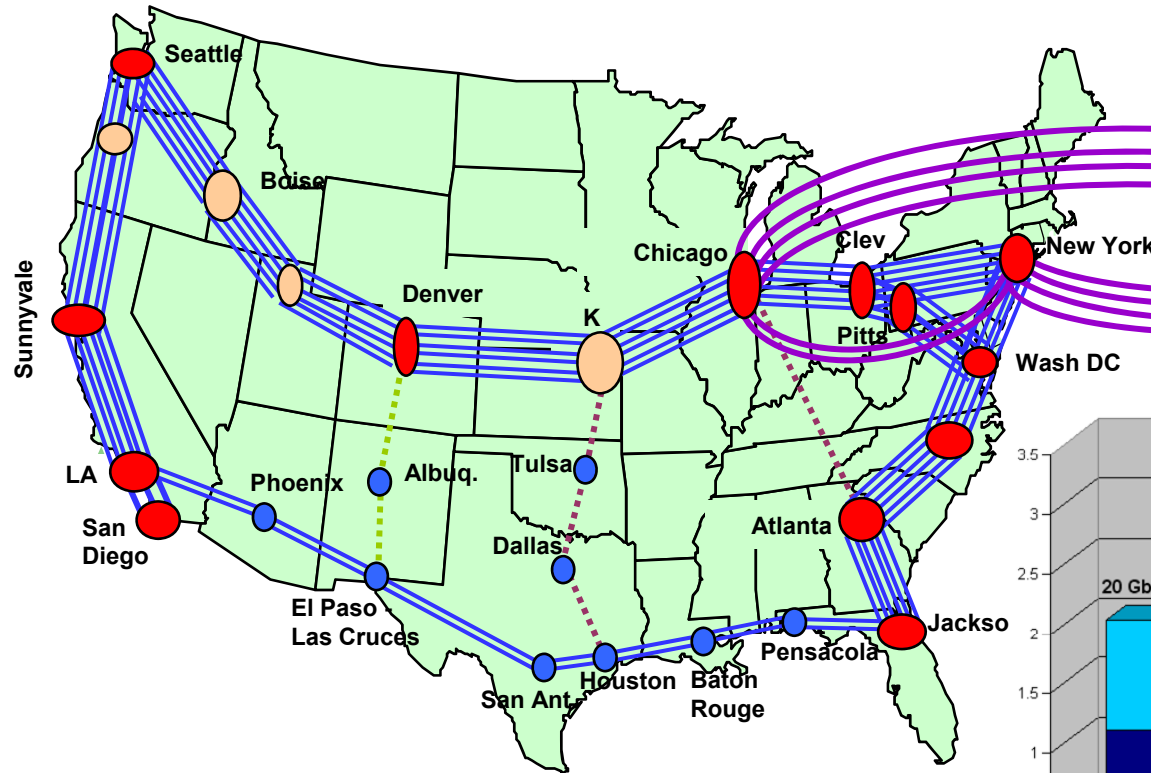

Ports at Each PoP	10 GbE Ports	OC-192/STM-64 Ports
<b>Two port 10 GbE card</b>	7	12
	9	
	16	
CHI	4	12

**Double density cards and matrix**

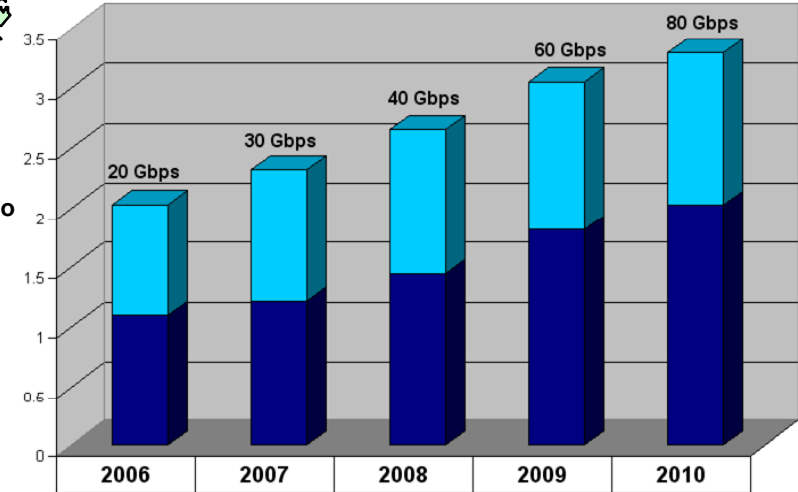

Ports at Each PoP	10 GbE Ports	OC-192/STM-64 Ports
<b>40 Gbps wavelengths?</b>	2	10
	8	
	4	
CHI	4	10

# LHCNet connections to ESnet: FY09/FY10

- NLR regeneration / OADM sites
- NLR wavegear sites
- ESnet via NLR (10 Gbps waves)
- LHCNet (10 Gbps waves)

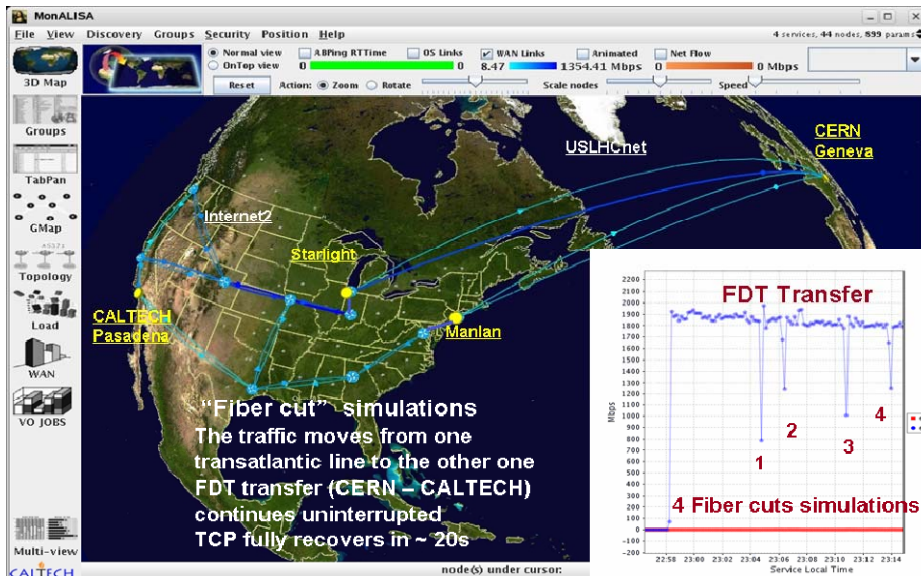

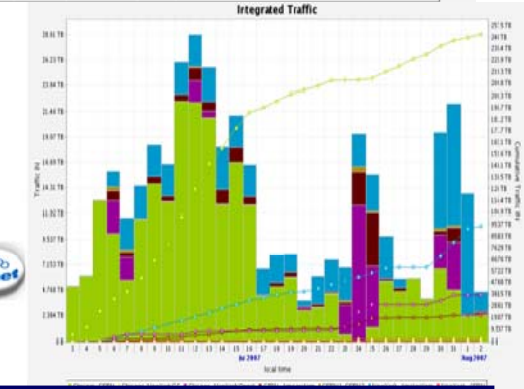

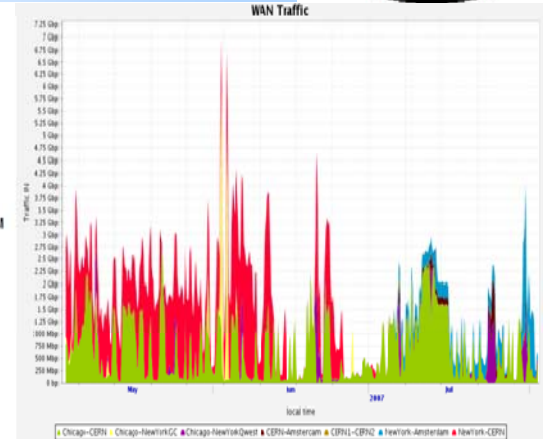

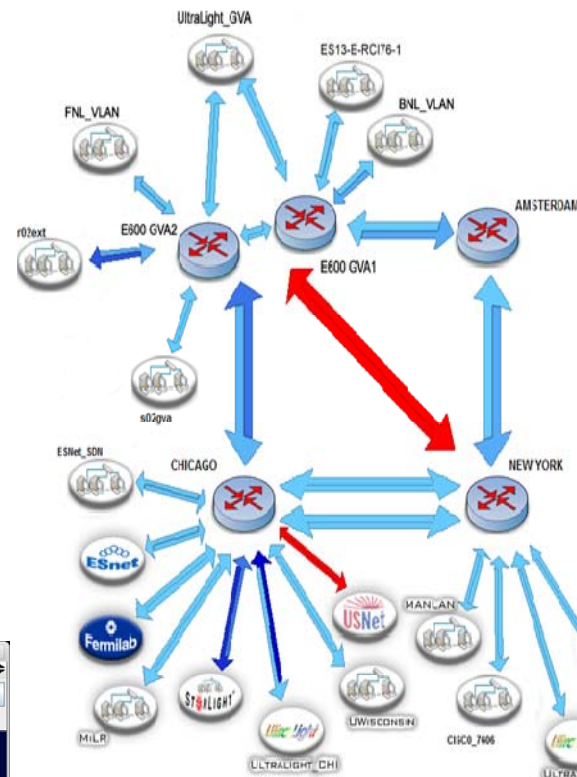

◆ LHCNet: To ~80 Gbps by 2009-10  
 ◆ Routing + Dynamic managed circuit provisioning

# Network Monitoring

- ◆ MonALISA (TL1 Module)
- ◆ Spectrum (CERN first line)
- ◆ Various open source tools (cricket, nagios, rancid, syslog-ng, etc)
- ◆ perfSONAR (GEANT E2ECU)

- ◆ True end-to-end (host-to-host) monitoring using MonALISA
- ◆ "Network intelligence" or the ability to reconfigure the circuits based on performance, changing network conditions or high-priority scheduled transfers

# US LHCNet Working Methods

## Production Network

*Develop and build  
next generation  
networks*

*High performance  
High bandwidth  
Reliable network*

### Pre-Production

N x 10 Gbps transatlantic testbed  
New Data transport protocols  
Interface and kernel setting  
HOPI / UltraScience Net /  
Ultralight / CHEPREO /  
LambdaSation  
Lightpath technologies  
Vendor Partnerships

*HEP & DoE  
Roadmaps*

*Testbed for Grid  
Development*

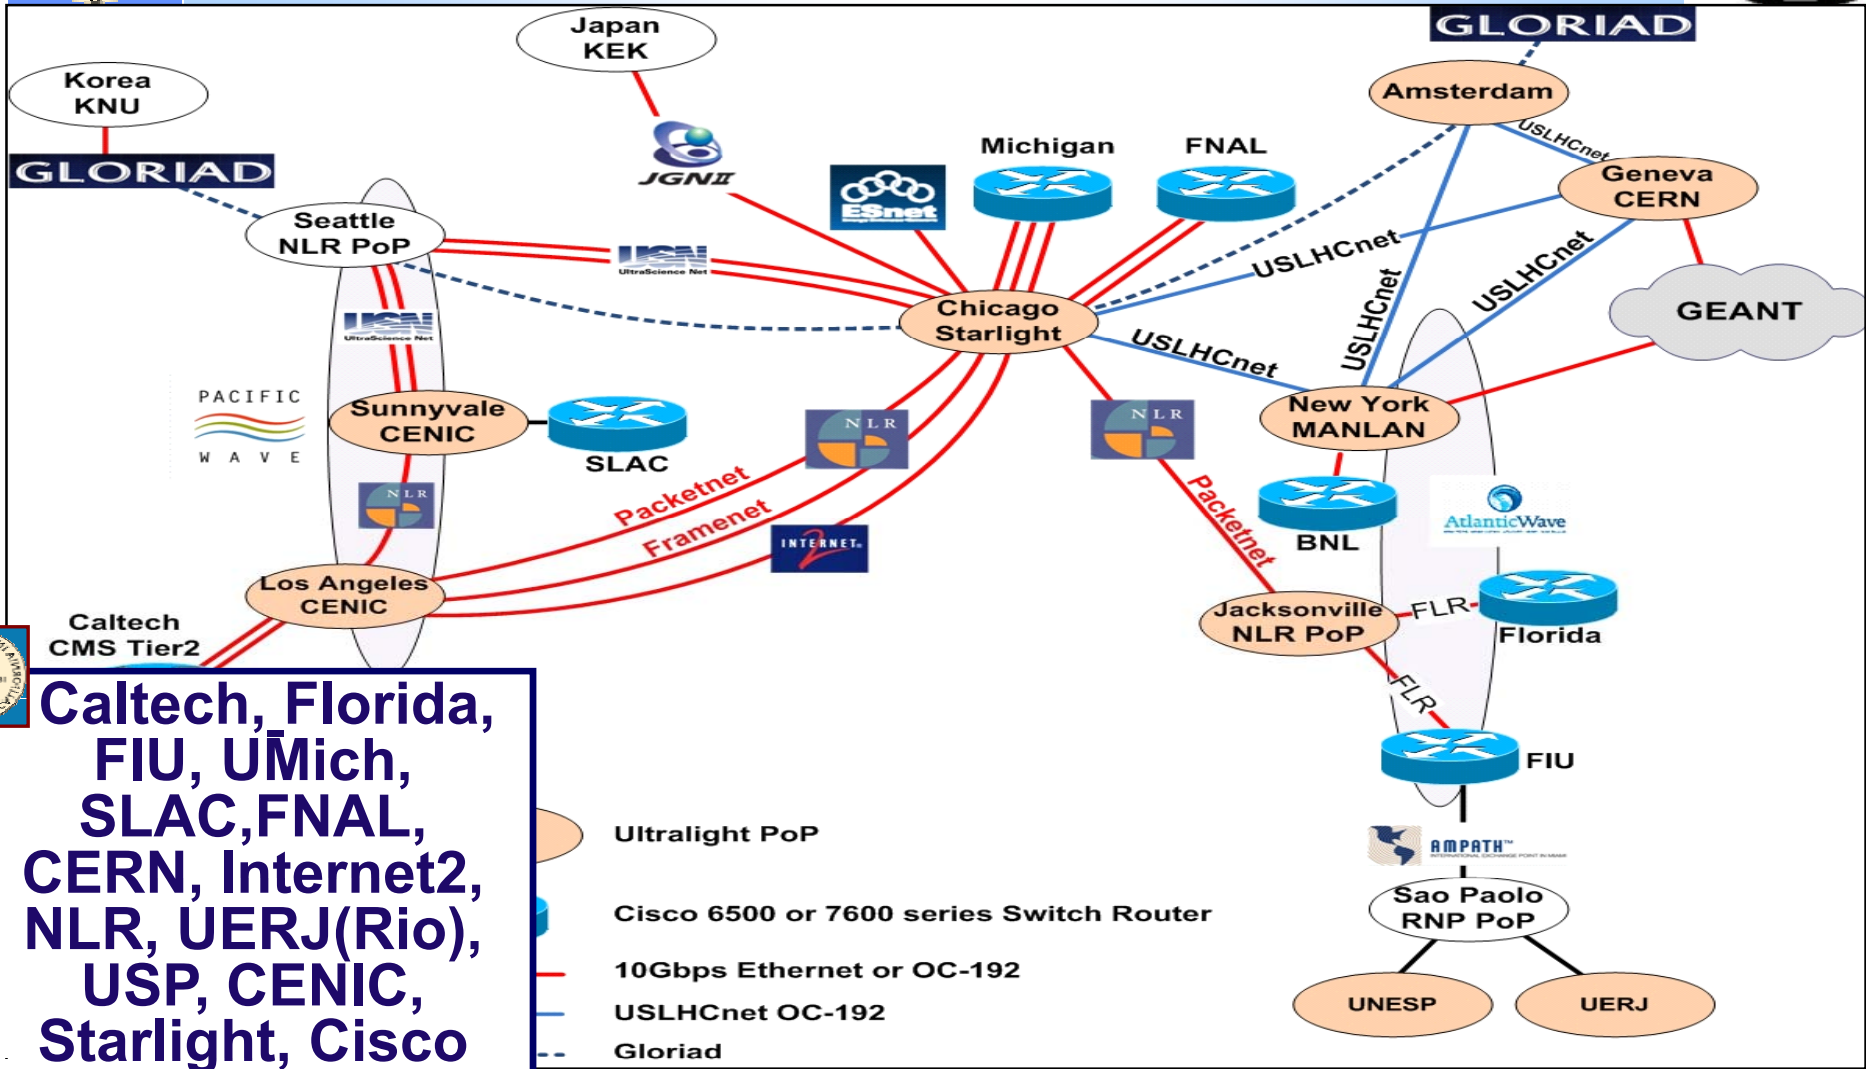

### Networks for Research

D0, CDF, BaBar, CMS, Atlas  
GRID applications  
PPDG/IVDGL, OSG, WLCG,  
DISUN  
LHCOPN  
Interconnection of US and  
EU Grid domains  
VRVS/EVO

# Four Continent Testbed and Facility

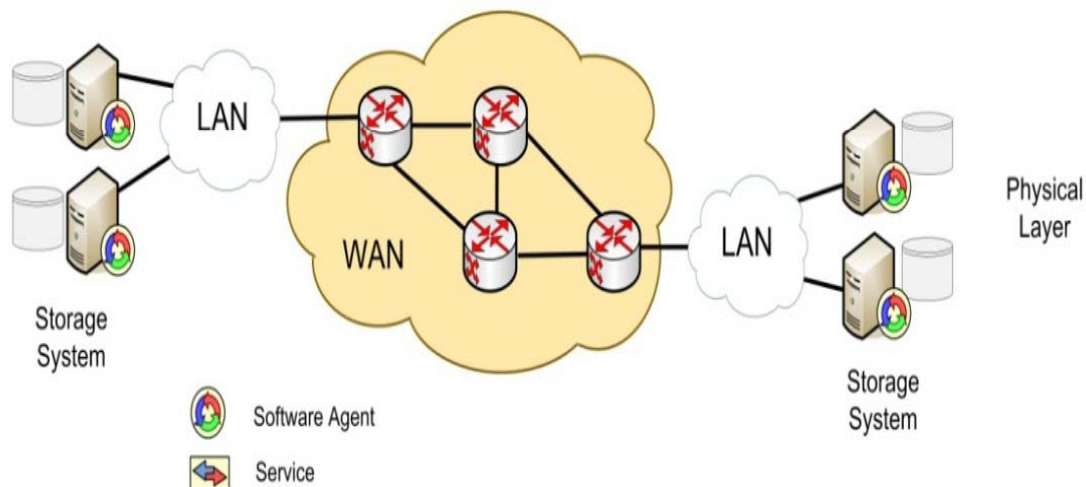

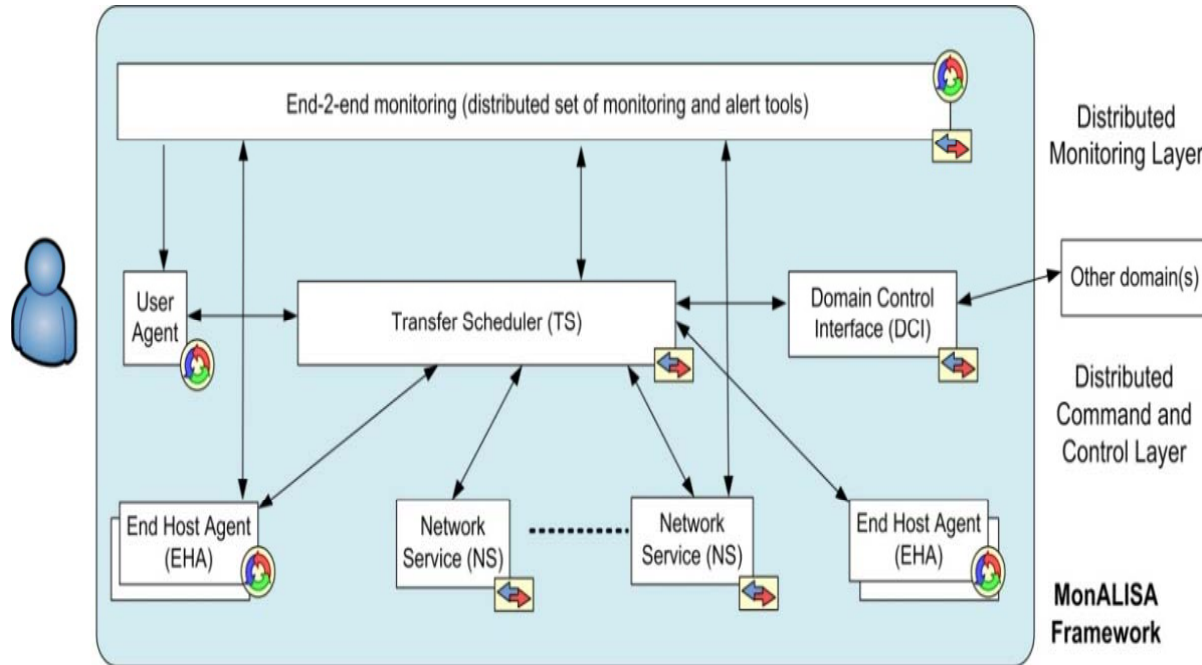

**Caltech, Florida, FIU, UMich, SLAC, FNAL, CERN, Internet2, NLR, UERJ(Rio), USP, CENIC, Starlight, Cisco**

**Building a global, network-aware end-to-end managed real-time Grid**

# Network Services for Managed End-to-End Data Transfers

## Robust Network Services based on

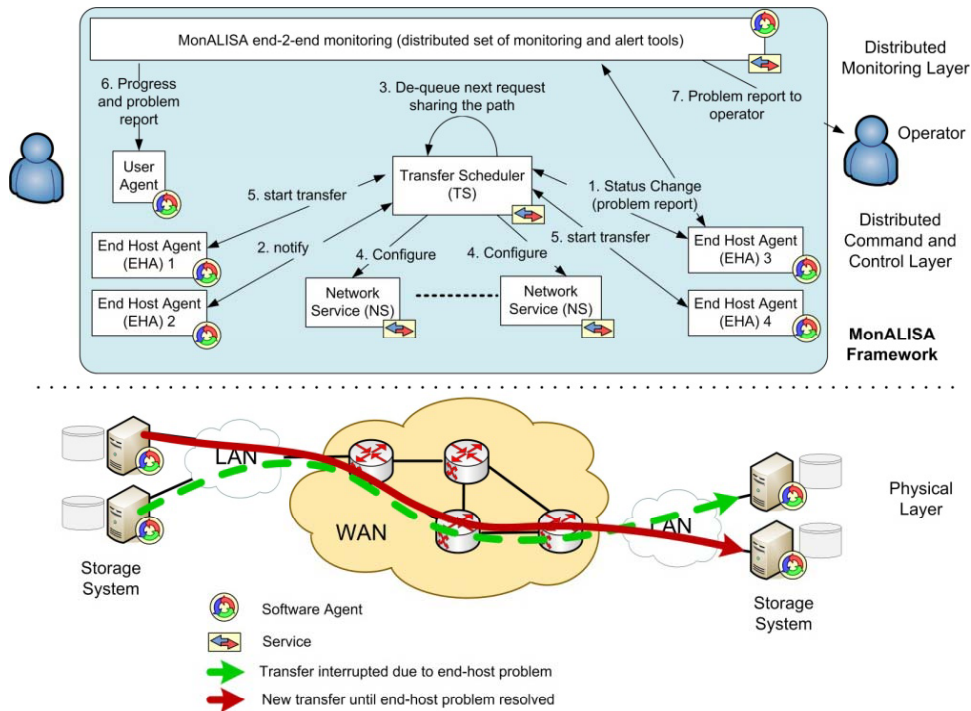

- ◆ Bandwidth guarantees
  - ★ Virtual Circuits
- ◆ Scheduled Transfers
  - ★ Transfer Classes
  - ★ Priorities
- ◆ Monitoring of all components end-to-end
  - ★ Network Elements
  - ★ End-Hosts
- ◆ Interface to other circuit-oriented systems
  - ★ Be part of heterogeneous end-to-end infrastructure

# Problem Finding and Resolution

- ◆ Problems encountered today are hard to track due to missing the *global view* of the system

## End-to-end Monitored Managed Transfers

- ◆ Track problem to the source
  - ★ Network / End-host
- ➔ Take appropriate action
  - ★ Change transfer path
  - ★ Adjust end-host parameters
  - ★ Re-schedule transfer
- ➔ Provide experts with relevant (real-time) information
- ◆ Keep the user/application up-to-date on transfer progress
- ◆ Progressive automation: Target optimal resource utilization
- ◆ Developed in the field-proven MonALISA Framework

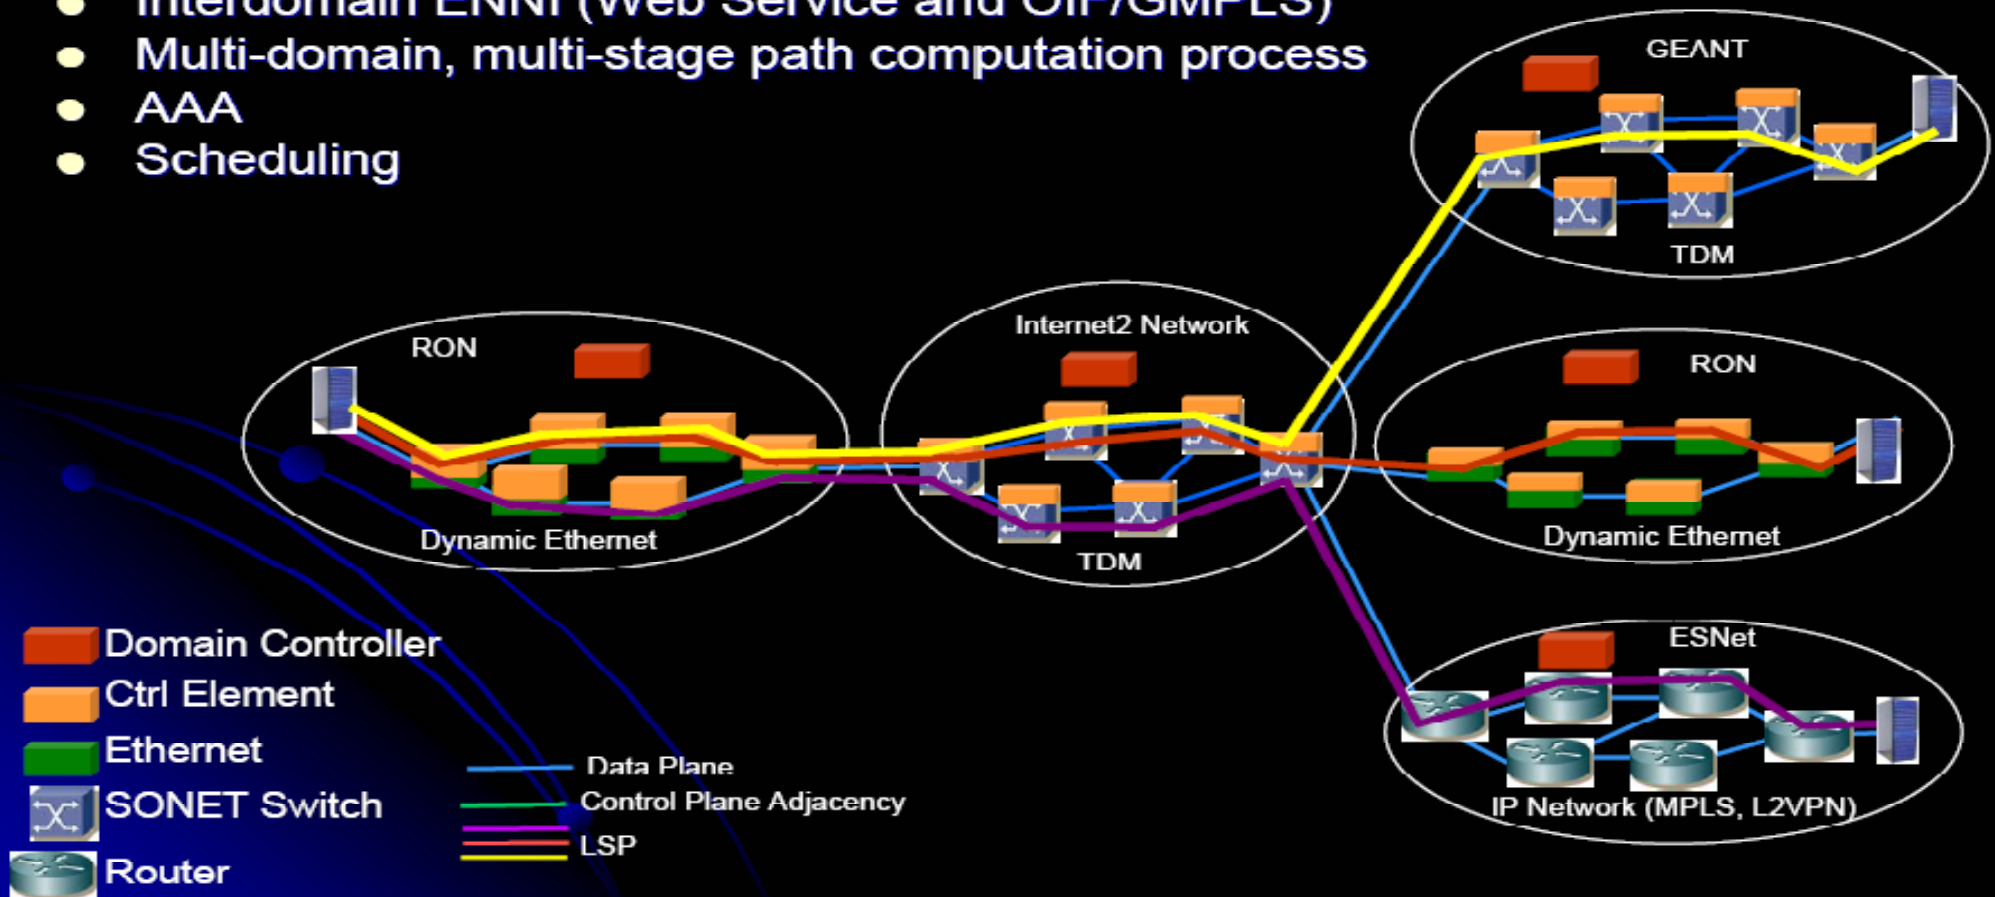

- ➔ **Example situation:** the system recognizes an end-host problem during the transfer and takes mitigating actions, re-scheduling transfers and notifying operators

## GLIF Concept

# Multi-Domain Control Plane The (near-term) big picture

- Multi-Domain Provisioning
- Interdomain ENNI (Web Service and OIF/GMPLS)
- Multi-domain, multi-stage path computation process
- AAA
- Scheduling

Tom Lehman, GLIF 2007 Winter Workshop

<http://www.glif.is/meetings/2007/winter/controlplane/lehman-dynamic-services.pdf>

# US LHCNet Milestones

- ◆ **“Pre-production”**: The new infrastructure initially deployed 2007 will offer circuit-based services intended to provide redundant paths and on-demand, high bandwidth end-to-end dedicated circuits. Circuit-switched services will be used to directly interconnect the DOE laboratories to CERN and will be available on demand to policy-driven, data-intensive applications, managed by MonALISA services
- ◆ **End of 2007**: initial deployment of our circuit oriented network services on US LHCNet; simple scheduler with fixed bandwidth circuits for site to site on-demand data set transfers.
- ◆ **Spring 2008**: interaction with the data transfer application of the experiments, as well as with other intra-domain and inter-domain (LambdaStation, TeraPaths, DRAGON, Oscars) control plane services in order to provide an end-to-end path reservation.
- ◆ **LHC Startup: July 2008**: We will begin to exercise the network and services with real data, in close cooperation with the LHC experiments.
