T3 - Metadata: from Records to Graphs (Room R150)

Wednesday, 19 June 2013 09:00 (2h 30m)

The tutorial will introduce traditional as well as state of the art approaches to modeling information objects and the processing environments they are part of, both in traditional memory institutions and in the Linked Data web. The central issue is to understand what is changing with RDF-graph based approaches to metadata generation and management. We will do some hands on work on semantic annotation as part of the workshop using the Pundit tool (<http://thepund.it>)

Presenter: Mr GRADMANN, Stefan

Session Classification: Tutorials
