

Saturation: discussion session

1. Theoretical questions:

- (a) To what extent do we have suppression of Pomeron loop effects with running coupling?
- (b) NLO BK?
- (c) Impact parameter structure
- (d) Beyond large- N_c

2. Phenomenological questions:

- (a) BK (NLO) with running coupling
- (b) diffraction; exclusive processes (vector-mesons, DVCS)
- (c) HERA vs. RHIC
- (d) Predictions for LHC (especially concerning multiple interactions)
