

Comp@P1 Ops and the LHC

- LHC and ATLAS

- LHC delivered 0.89fb^{-1} last week ($\sim 0.25\text{fb}^{-1}$ per day max)
 - 84 hr MD planned in wk 48, Nov. 26 followed by a split with and without 25ns bunch spacing in Dec. 6 through Dec. 13 → This leads into 25ns physics runs of about a week
- ATLAS recorded $\sim .8\text{fb}^{-1}$ at low efficiency $\sim 89\%$ → caused by detector system recovery issues
- Physics Data taking through the week

- Comp@P1 shifts

- Shift is filled except for 27 slots through the end of this LHC run

- AMOD shifts

- Thanks to the help of experts, AMOD shifts well covered through Dec. 16!!
 - As usual X-mas shutdown period needs special arrangements for the coverage...
