Bourricot graphs

Used disk space for INFN-T1 DATADISK

Used disk space for TAIWAN-LCG2_DATADISK

196 TB overlapping datasets

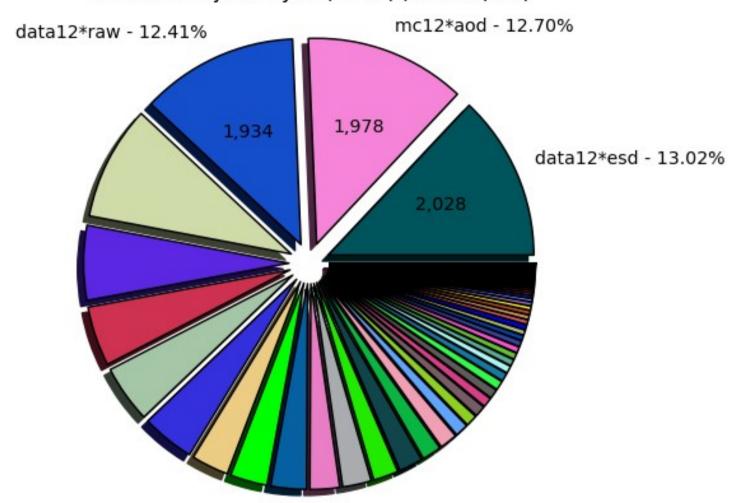

• 76.5 TB

Mitigation steps

- TAIWAN will add 50 TB to DATADISK
- INFN-T1 and TAIWAN out of T1-T1 replication
- INFN-T1 out of T0 export
- Today we will start deleting group datasets from T1 DATADISKs
 - This was agreed with groups
 - ~20k datasets, ~200TBs
 - More datasets will be come to this mechanism
- Try to identify unneeded primary replicas of certain datasets
 - Long term step

Number of Physical Bytes (in TBs) (Sum: 15,623)

data12*esd - 13.02% (2,029)

data12*aod - 5.88% (917.00)
