

CMS Operational Issues (Nov 1):

We have had a number of errors for tape archiving at ASGC. Due to the CMS data distribution and access model this limits our ability to make good use of the site. Could use some help.

We will be pushing for a broader deployment of the Xrootd servers to act as sources of data and broader deployment of fall back channel on sites. We are receiving significant pushback from the Tier-1s in particular. The worker nodes are not inside the OPN at many sites. Would like to understand what ALICE has done.

Working on further deployment of PerfSonar infrastructure with Simone Campana

FTS servers need an RPM update because they are not updating the sub-mapfile. Cron job points to old glite.
