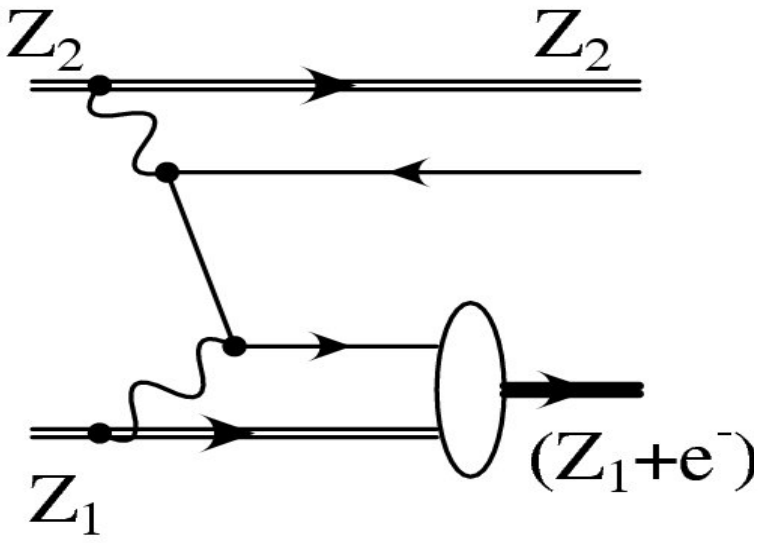
Photon-photon and photo-nuclear collisions at CERN

C.A. Bertulani
Department of Physics and Astronomy
Texas A&M University-Commerce

Gerhard Baur, IKP-Juelich & U. Basel

Workshop on photon-induced collisions at the LHC, June 2-4, 2014.

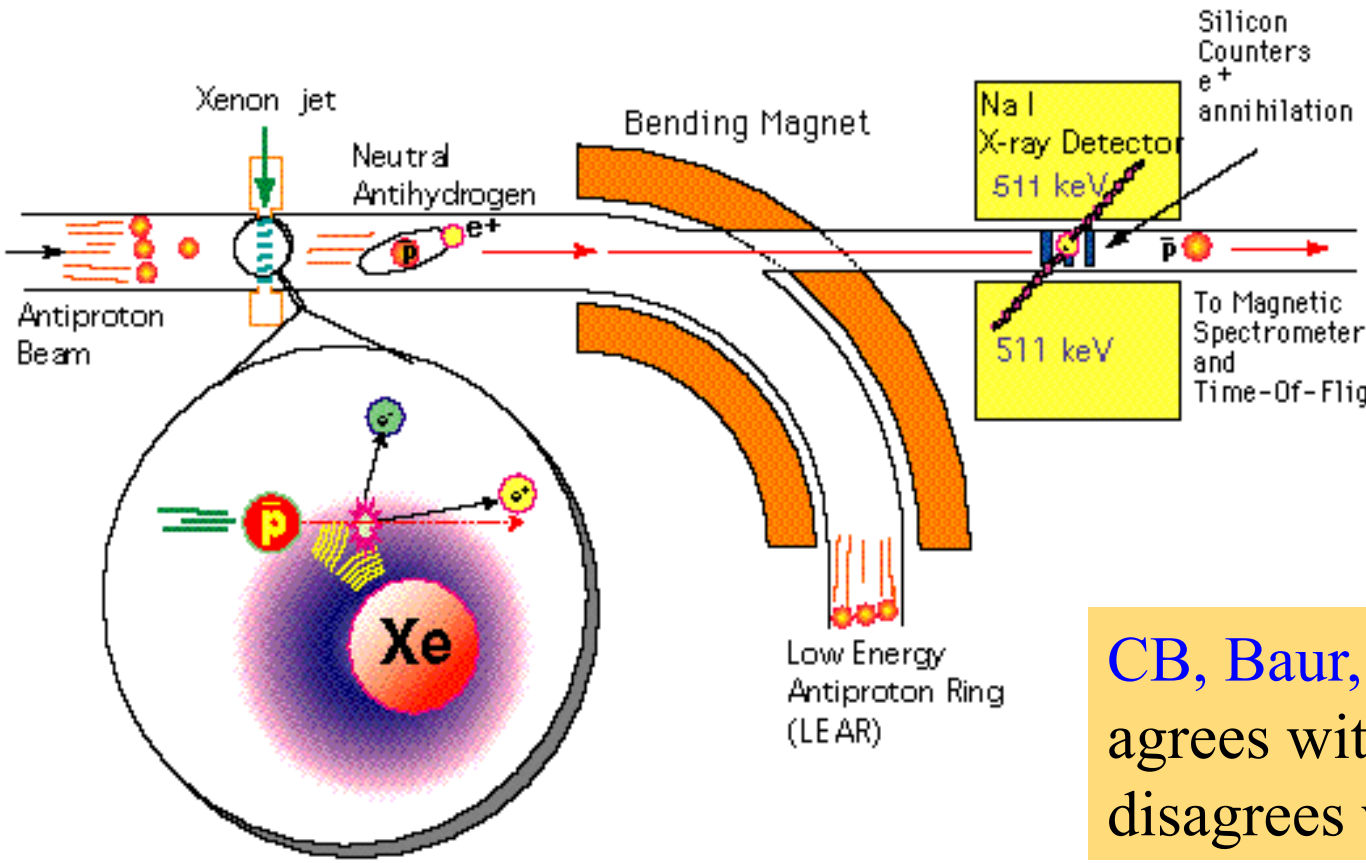
Pair Production with Capture



CB, Baur, Phys. Rep. 163, 299 (1988)

$$\sigma \propto \frac{Z_P^2 Z_T^6 \alpha^8}{m_e^2}\left[\ln\left(\frac{0.68\,\gamma}{2}\right)-\frac{5}{3}\right]$$

~ 300 b for Pb+Pb at LHC



Production of anti-H

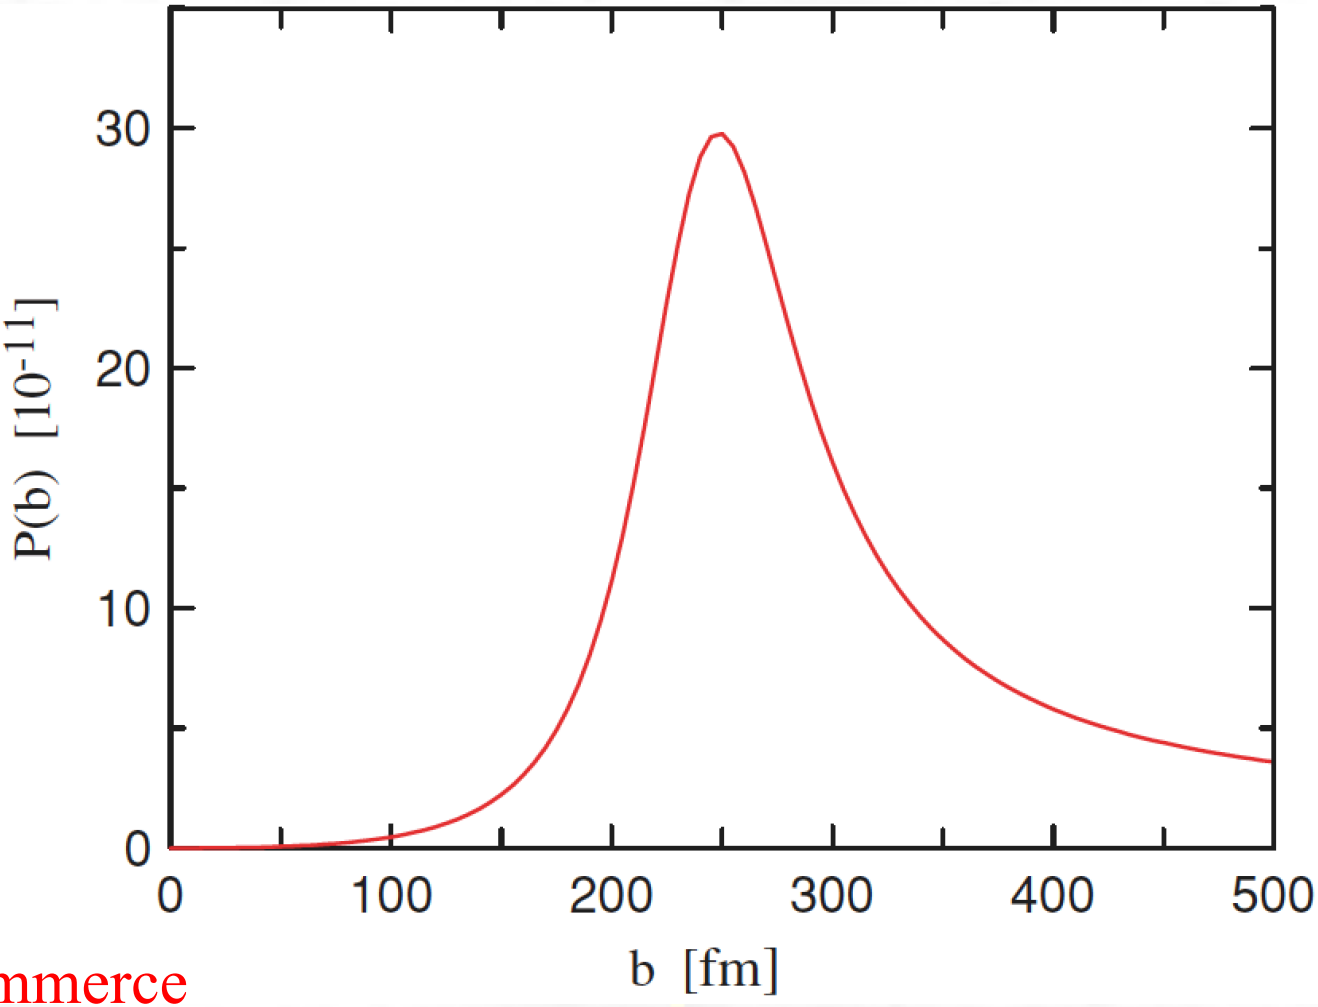
CERN: Baur et al, PLB 368, 251 (1996)

Fermilab: G. Blanford et al, PRL 80, 3037 (1998)

CB, Baur, PRD 58, 034005 (1998) agrees with Fermilab data but disagrees with CERN (10 x)

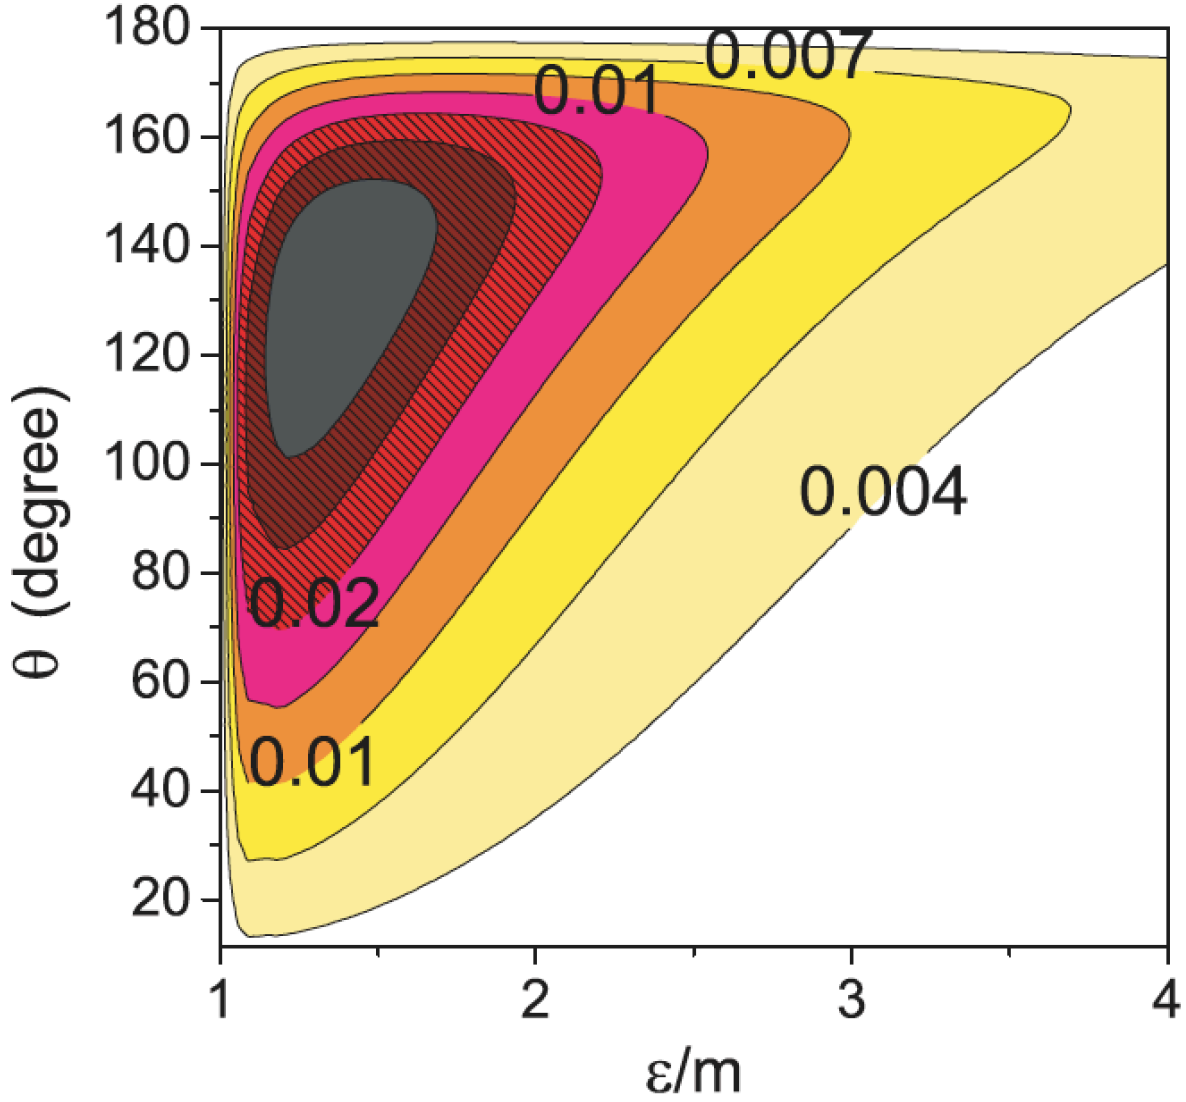
Production of Exotic Atoms

Mark Ellermann
Texas A&M University-Commerce



Probability of muonic atom production in pp collisions at the LHC as a function of the impact parameter.

Production of Exotic Atoms



Contour plot with the angular distribution of the positive muon when the negative muon is captured by a proton at the LHC, as a function of the angle that the free muon has with the direction of motion of the muonic atom and of the energy of the free positive muon.

Production of Exotic Atoms

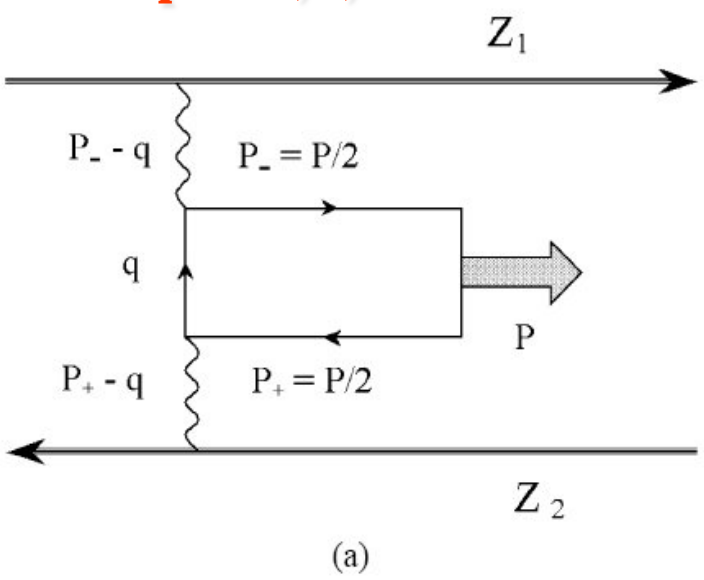
CB, Ellermann, PRC 81, 044910 (2010)

"Exotic" atom	γp	γA
Hydrogen	63.4	132 b
muonic	44.8×10^{-4}	0.16 mb
pionic	21.3×10^{-4}	0.09 mb
kaonic	1.3×10^{-4}	4.3 μb
ρ atom	0.51×10^{-4}	1.3 μb
protonium	0.09×10^{-4}	0.5 μb

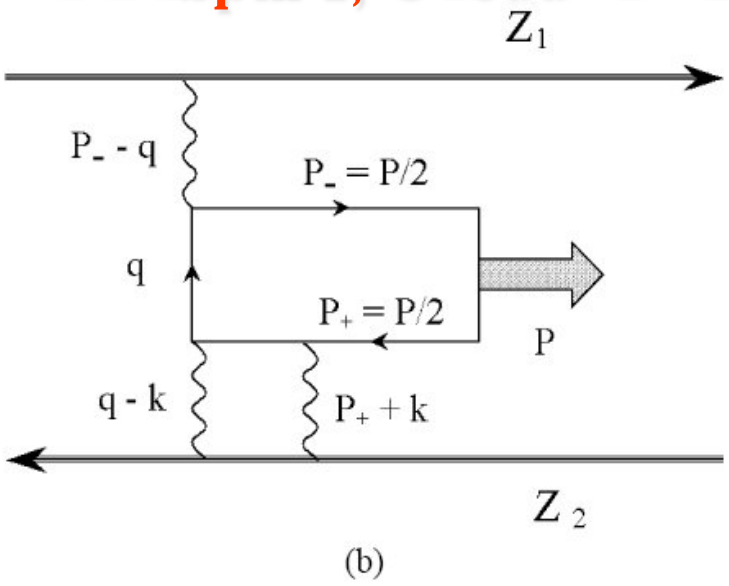
Cross sections for production of exotic atoms in pp and PbPb collisions at the CERN Large Hadron Collider (LHC).

QFT with Bound states

Spin 0,2, C=even



Spin 1, C=odd



Fernando Navarra
University of São Paulo

$$\mathcal{M} = -ie^2\bar{u}\left(\frac{P}{2}\right)\left[\int \frac{d^4q}{(2\pi)^4}\,\not{A}^{(1)}\left(\frac{P}{2}-q\right)\frac{\not{q}+m}{q^2-m^2}\right.$$
$$\left.\times\,\not{A}^{(2)}\left(\frac{P}{2}+q\right)+\not{A}^{(1)}\left(\frac{P}{2}+q\right)\frac{\not{q}+m}{q^2-m^2}\,\not{A}^{(2)}\left(\frac{P}{2}-q\right)\right]v\left(\frac{P}{2}\right)$$

Bodwin, Yennie, Gregorio,
Rev. Mod. Phys. 57, 723 (1985)

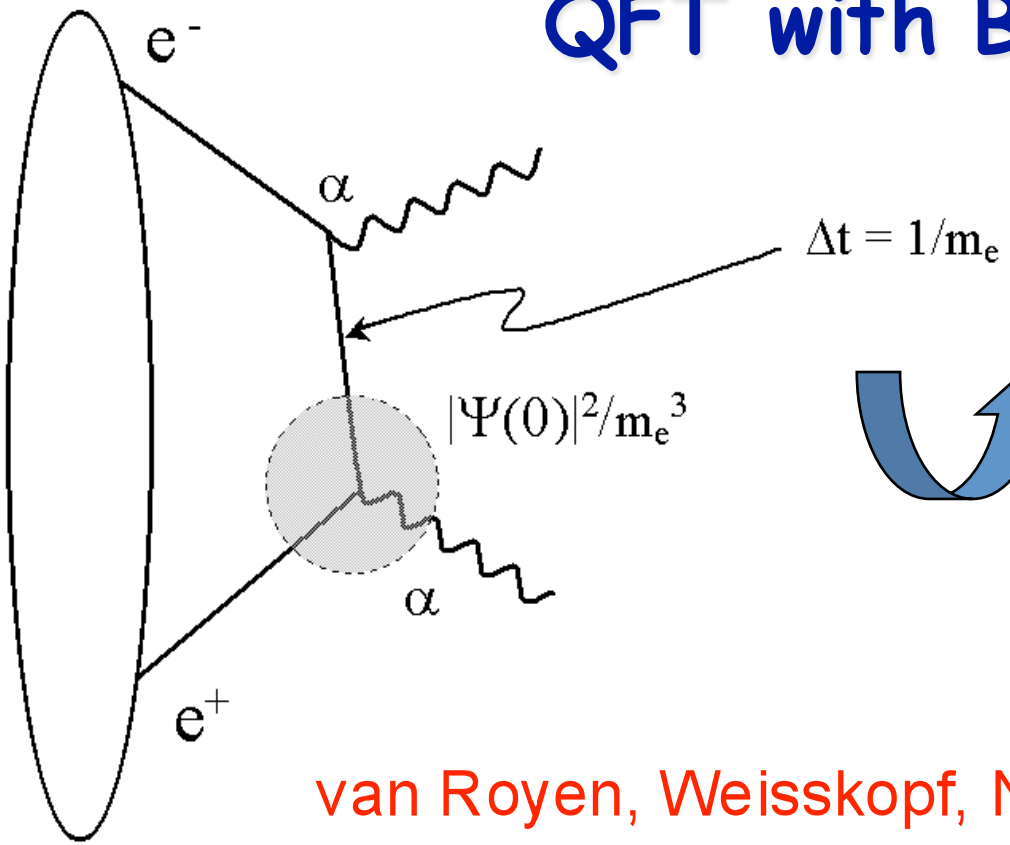
CB, Navarra, NPA703 (2002) 861

Spin 0 $\quad \bar{u}Bv \longrightarrow \sqrt{2M}\ \mathrm{tr}\left(\frac{B}{\sqrt{2}}\right)\Psi(0)$

Spin 1 $\quad \bar{u}Bv \longrightarrow \sqrt{2M}\ \mathrm{tr}\left(\frac{\hat{\epsilon}.\sigma}{\sqrt{2}}B\right)\Psi(0)$

Example: parapositronium (S = 0) and orthopositronium (S = 1)

QFT with Bound states



$$\Gamma \sim \alpha^2 |\Psi(0)|^2 / m_e^2$$

RECIPE

- replace electrons by quarks
- get rid of $|\psi(0)|^2$

van Royen, Weisskopf, Nuovo Cimento A 50, 617 (1967)
Appelquist, Politzer, PRL 34, 365 (1975)

$$\Gamma_{\gamma\gamma}^{J=0} = \frac{48\pi\alpha^2}{M^2} |\Psi(0)|^2 \sum_i Q_i^4$$

$$\Gamma_{\gamma\gamma}^{(J=2)} = (2J+1)\Gamma_{\gamma\gamma}^{(J=0)} = 5\,\Gamma_{\gamma\gamma}^{(J=0)}$$

Example: parapositronium (S = 0) at LHC

$$|\Psi(0)|^2 = (m_e\alpha)^3 / 8\pi n^3$$

$$\sigma = 325\ \text{mb}$$

Study of positronium propagation in thin metals:
QFT for bound states

QFT with bound states at CERN

$$\sigma_X = \int d\omega_1 d\omega_2 \, n_\gamma(\omega_1)\, n_\gamma(\omega_2)\, \sigma^X_{\gamma\gamma}(\omega_1\omega_2 s)$$

$$n(\omega,b) = \frac{2Z^2\alpha\omega^2}{\pi\gamma^2}\int_0^\infty db\, b\left[K_1^2(\xi) + \frac{1}{\gamma^2}K_0^2(\xi)\right]\exp\left\{-\sigma_{NN}\int_{-\infty}^{\infty}dz'\int d^3r\,\rho(\mathbf{r})\rho(\mathbf{r}'-\mathbf{r})\right\}$$

$$\xi = \frac{\omega b}{\gamma_c}$$

No need for minimum impact parameter

$$\frac{dn}{d\omega} = 2\pi\int db\, b\int_0^R dr\, r\int_0^{2\pi} d\phi\,\frac{d^3n(\omega, b + r\cos\phi)}{d\omega d^2b}$$

Baur, Baron, NPA 561, 628 (1993)

For meson production at CERN use above in conjunction with

Low, Phys. Rev. 120, 582 (1960)

$$\sigma^X_{\gamma\gamma}(x_1x_2s) = 8\pi^2(2J+1)\frac{\Gamma_{m_X\to\gamma\gamma}}{m_X}\delta\left(x_1x_2s - m_X^2\right)$$

Comment on Joakim Nystrand's Equivalent Photon Spectrum

Low Energies

$$n_{E2} >> n_{E1} >> n_{M1} = \beta^2 n_{E1}$$

High Energies

$$n_{E2} \approx n_{E1} \approx n_{M1}$$

Very High Energies (CERN)

$$n_{E2} = n_{E1} = n_{M1}$$

"Peripheral heavy ion collisions as a **probe of the nuclear gluon distribution**"

Los Alamos posted in 10/29/2001

Victor Gonçalves
Federal University of Pelotas

$$\sigma_{\gamma g \to c\bar{c}}(s) = \int_{2m_c}^{\sqrt{s}} dM_{c\bar{c}} \frac{d\sigma_{c\bar{c}}}{dM_{c\bar{c}}} g_A(x,\mu)$$

$$\frac{d\sigma_{\gamma g \to c\bar{c}}}{dM_{c\bar{c}}} = \frac{4\pi\alpha\alpha_s e_c^2}{M_{c\bar{c}}^2}\left[\left(1+\varepsilon-\frac{1}{2}\varepsilon^2\right)\ln\left(\frac{1+\sqrt{1-\varepsilon}}{1-\sqrt{1-\varepsilon}}\right)-(1+\varepsilon)\sqrt{1-\varepsilon}\right]$$

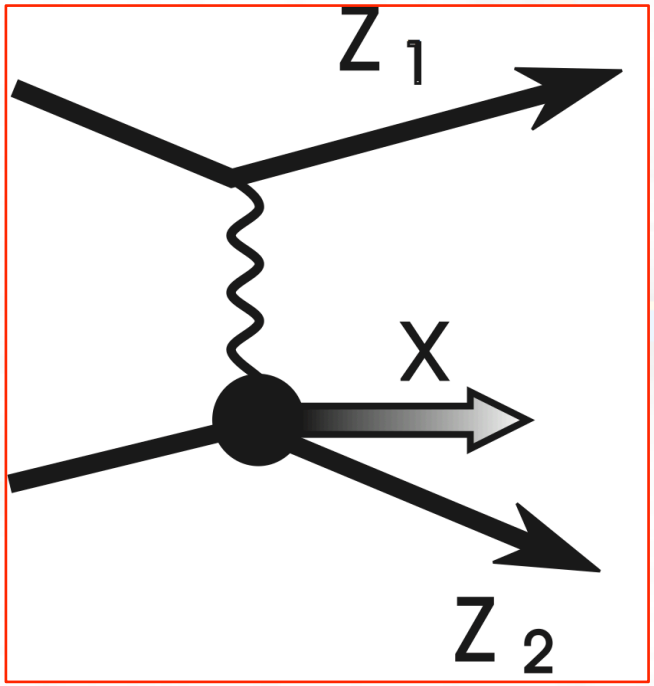
Glueck, Reya, Phys. Lett. 79, 453 (1978)

$$\varepsilon = \frac{4m_c^2}{M_{c\bar{c}}^2}$$

$m_c = 1.45$ GeV

Parton Distribution Functions at the LHC

$$\sigma\left(AA \to XXq\bar{q}\right) = \int \frac{d\omega}{\omega} n(\omega) \otimes \sigma_{\gamma g \to q\bar{q}} \otimes xG_A\left(x,Q^2\right)$$



$$\gamma_c = 2\gamma_{lab}^2 - 1$$

Bjorken $$x = \frac{M}{2p} e^{-y} << 1$$

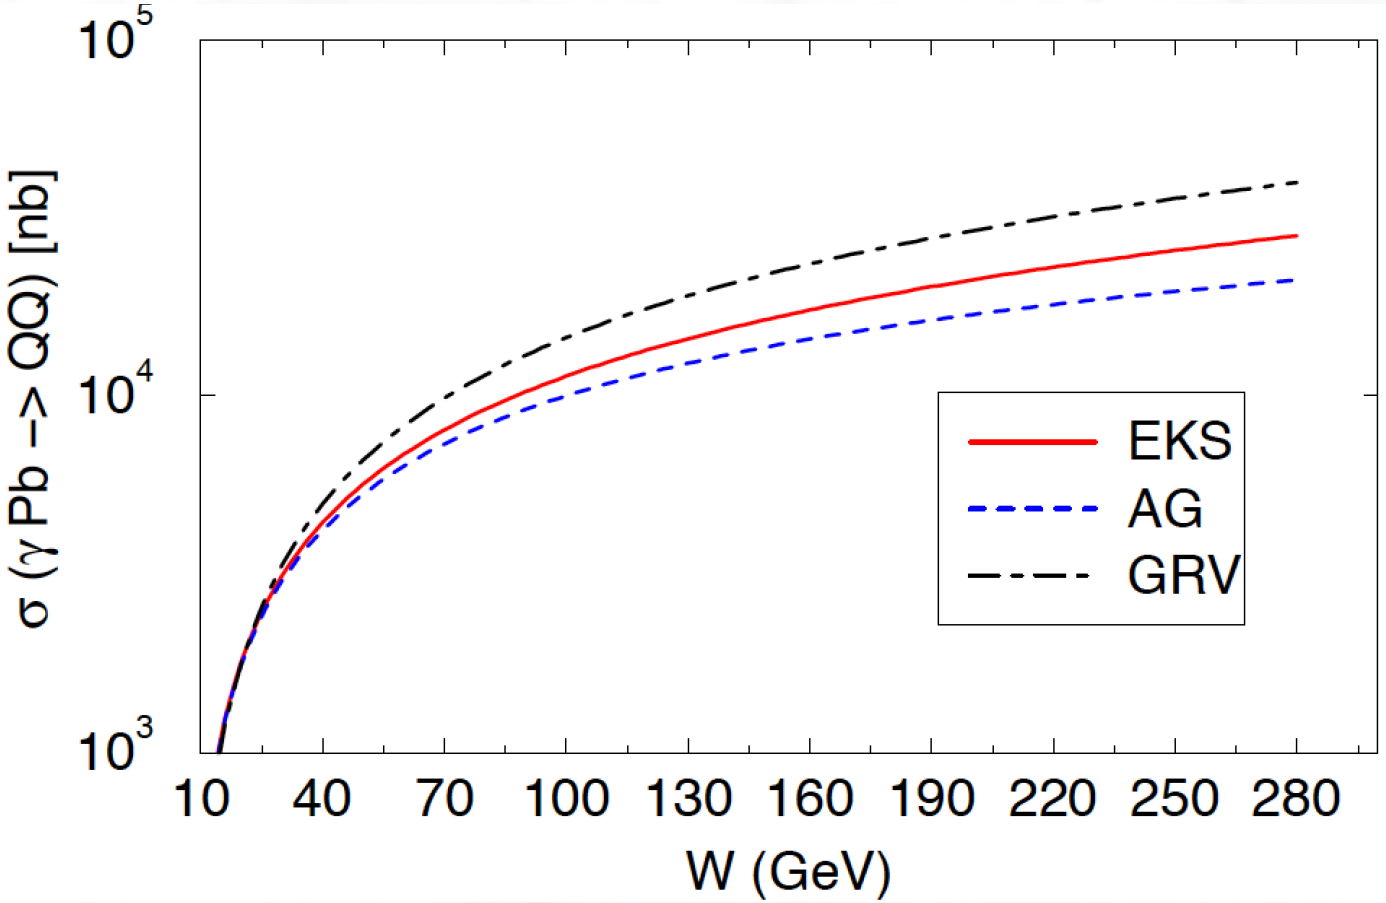
No medium corrections

$$xG_A\left(x,Q^2\right) = A \otimes xG_N\left(x,Q^2\right)$$

medium corrections

$$xG_A\left(x,Q^2\right) = R_G \otimes xG_N\left(x,Q^2\right)$$

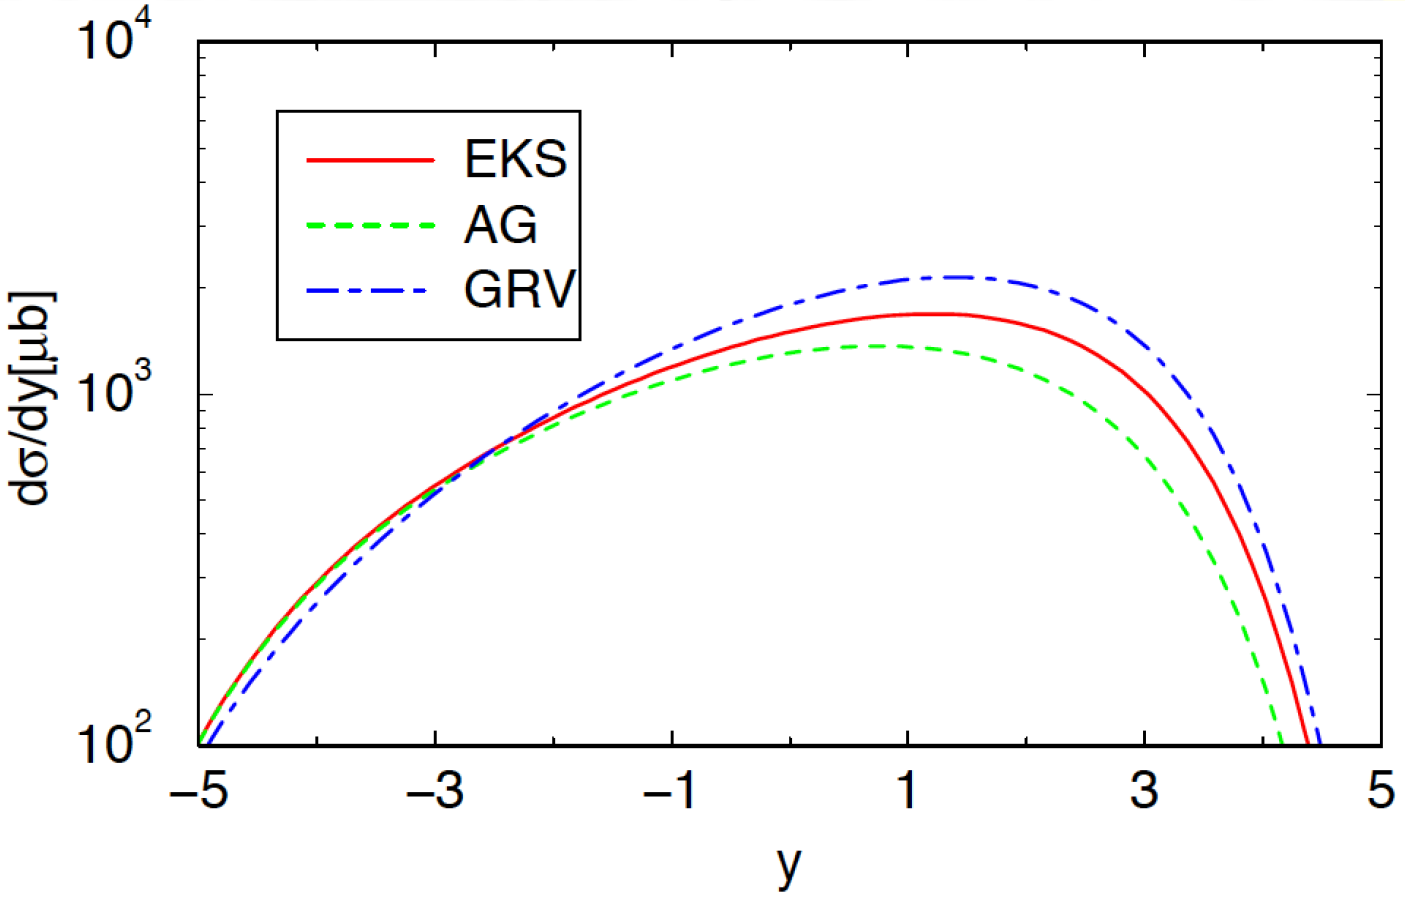
Parton Distribution Functions at the LHC



Energy dependence of the photoproduction of heavy quarks for distinct nuclear gluon distributions (A = 208).

- EKS = Eskola, Kolhinen, Salgado, EPJ. C9, 61 (1999)
- AG = Ayala, Gonçalves, EPJ. C 20, 343 (2001)
- GRV = Glück, Reya, Vogt, Z. Phys. C67, 433 (1995)

Parton Distribution Functions at CERN

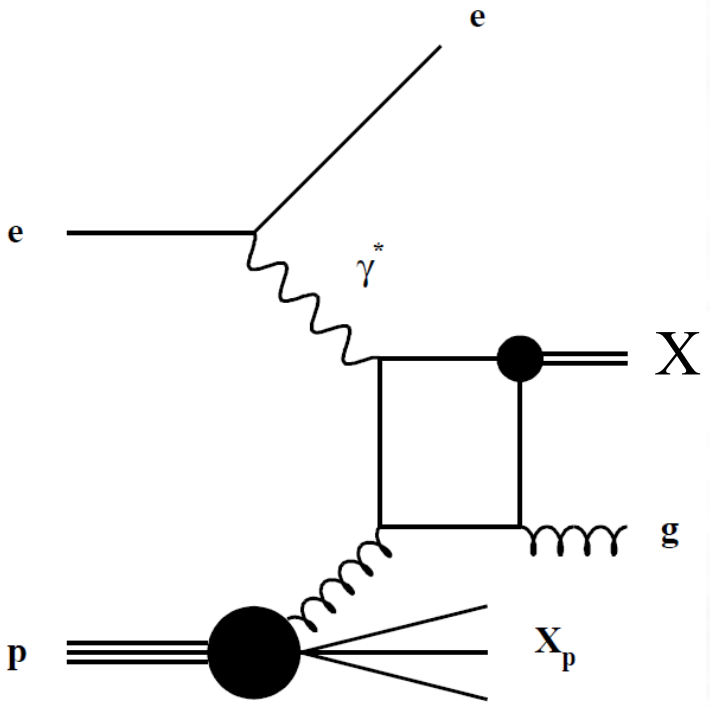


Rapidity distribution for the photoproduction of charm quarks in ^{208}Pb + ^{208}Pb collisions at the LHC.

- EKS = Eskola, Kolhinen, Salgado, EPJ. C9, 61 (1999)
- AG = Ayala, Gonçalves, EPJ. C 20, 343 (2001)
- GRV = Glück, Reya, Vogt, Z. Phys. C67, 433 (1995)

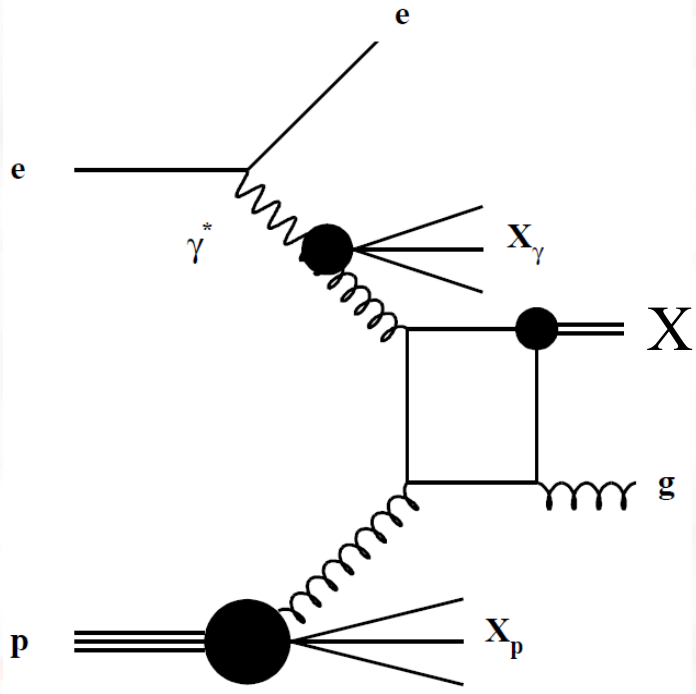
Resolved Photons

$$\sigma(AA \to XXq\bar{q}) = \int \frac{d\omega}{\omega} n(\omega) \otimes x_\gamma G_\gamma(x_\gamma, Q^2) \otimes \sigma_{gg \to q\bar{q}} \otimes xG_A(x, Q^2)$$

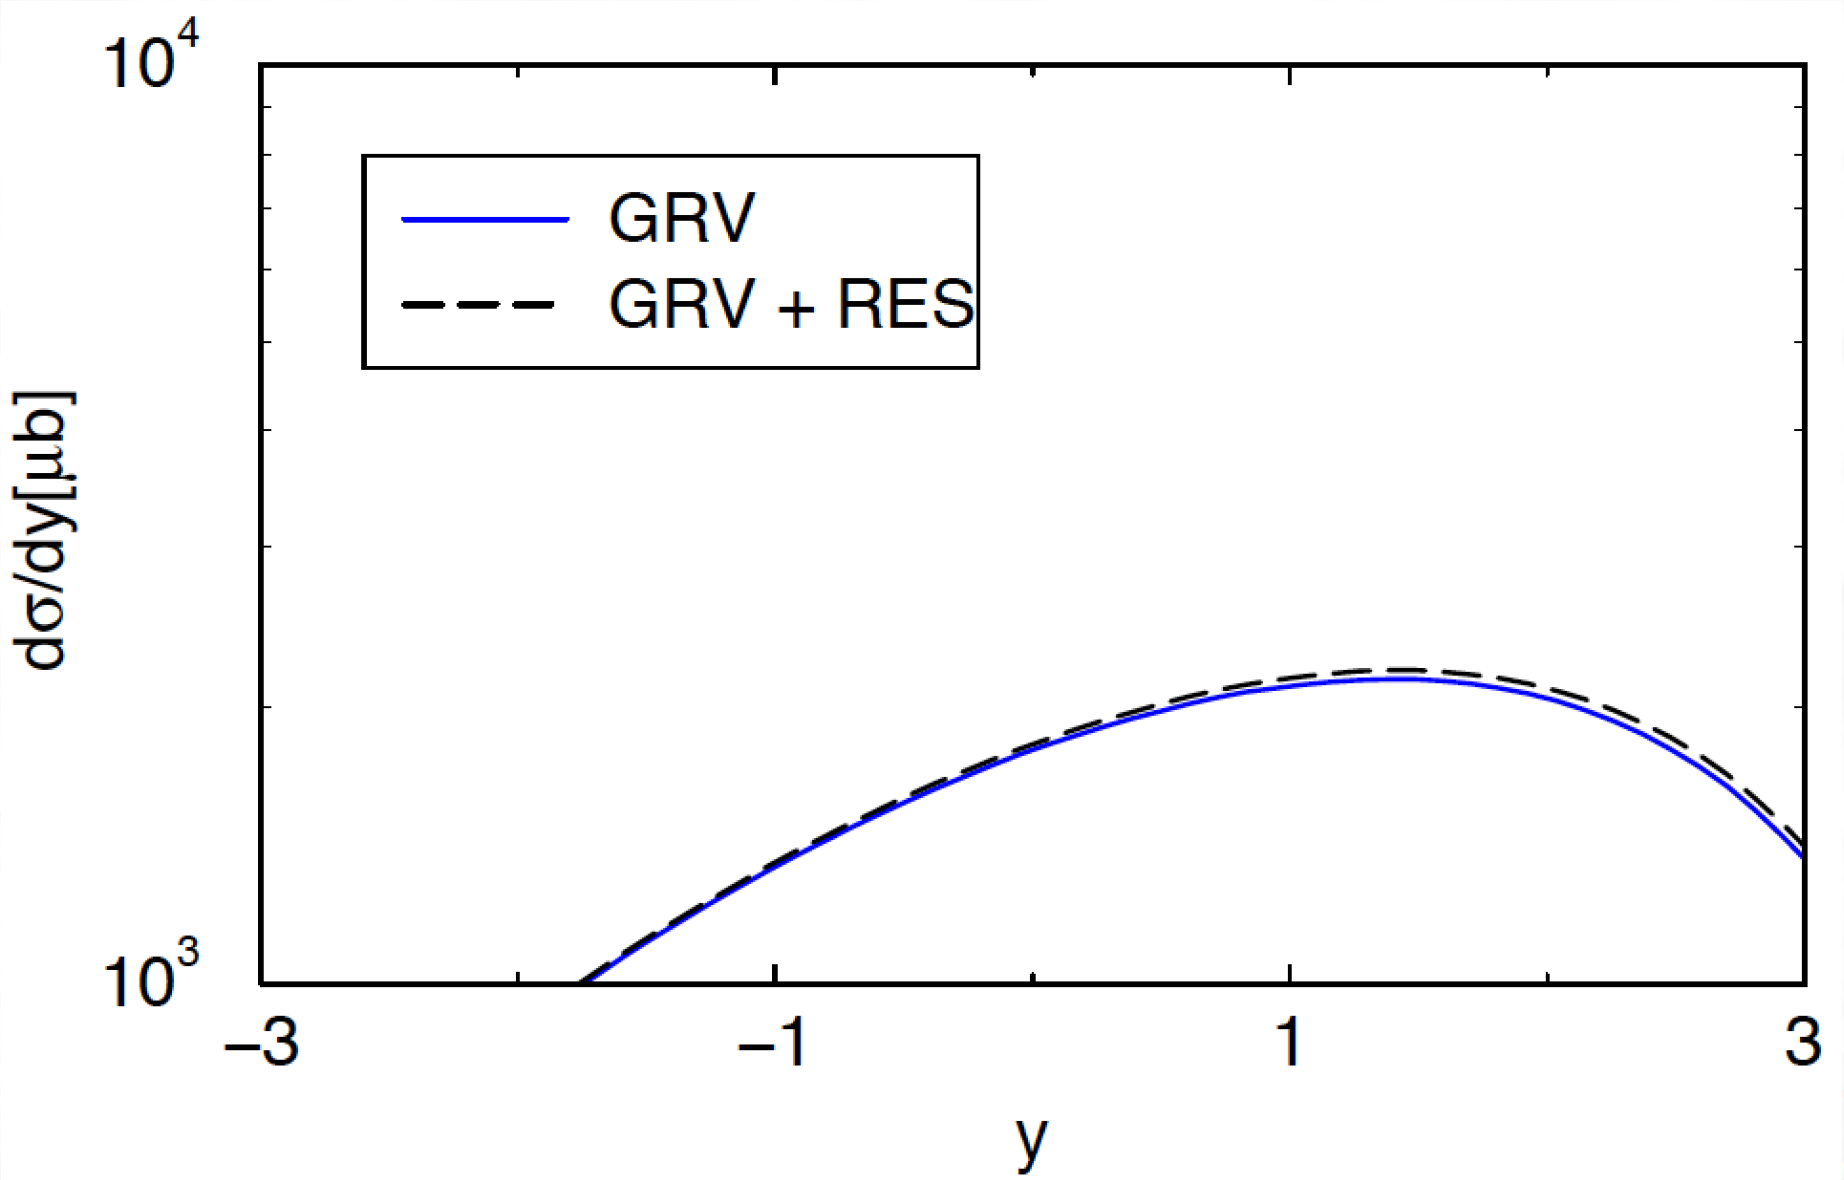


Glück, Owens, Reya, PRD 17, 2324 (1978)

$$\sigma_{gg \to q\bar{q}}(\hat{s}) = \frac{\pi \alpha_s^2(Q^2)}{3\hat{s}} \left[\left(1 + \varepsilon + \frac{\varepsilon^2}{16}\right) \ln\left(\frac{1+\sqrt{1-\varepsilon}}{1-\sqrt{1-\varepsilon}}\right) - \left(\frac{7}{4} + \frac{31}{16}\varepsilon\right)\sqrt{1-\varepsilon} \right]$$



Resolving resolved photons



Rapidity distribution for the photoproduction of charm quarks in ^{208}Pb + ^{208}Pb collisions at LHC with (GRV+RES) and without (GRV) the inclusion of the resolved contribution.

J/ψ production at the LHC

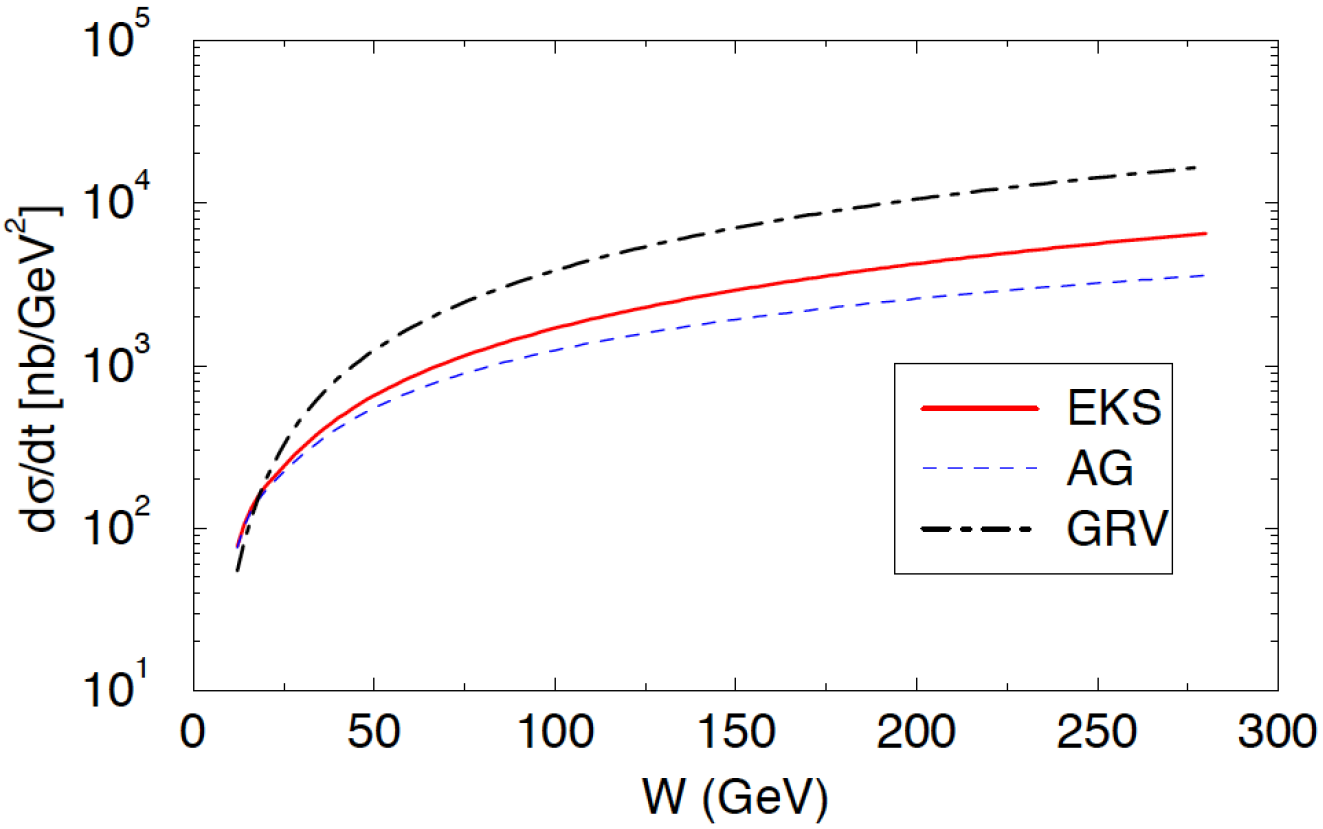
$$\left.\frac{d\sigma(\gamma A \to J/\psi)}{dt}\right|_{t=0} = \frac{\pi^3 \Gamma_{ee} M_{J/\psi}^3}{48\alpha} \frac{\alpha_s^2(\bar{Q}^2)}{\bar{Q}^8}\left[xG_A(x,\bar{Q}^2)\right]^2$$

Stronger dependence on G

$$\sigma(AA \to AAJ/\psi) = \int \frac{d\omega}{\omega} n(\omega) \int_{t_{min}}^{\infty} dt \left.\frac{d\sigma(\gamma A \to J/\psi)}{dt}\right|_{t=0} |F(t)|^2$$

$m_{J/\psi} = 3.097$ GeV

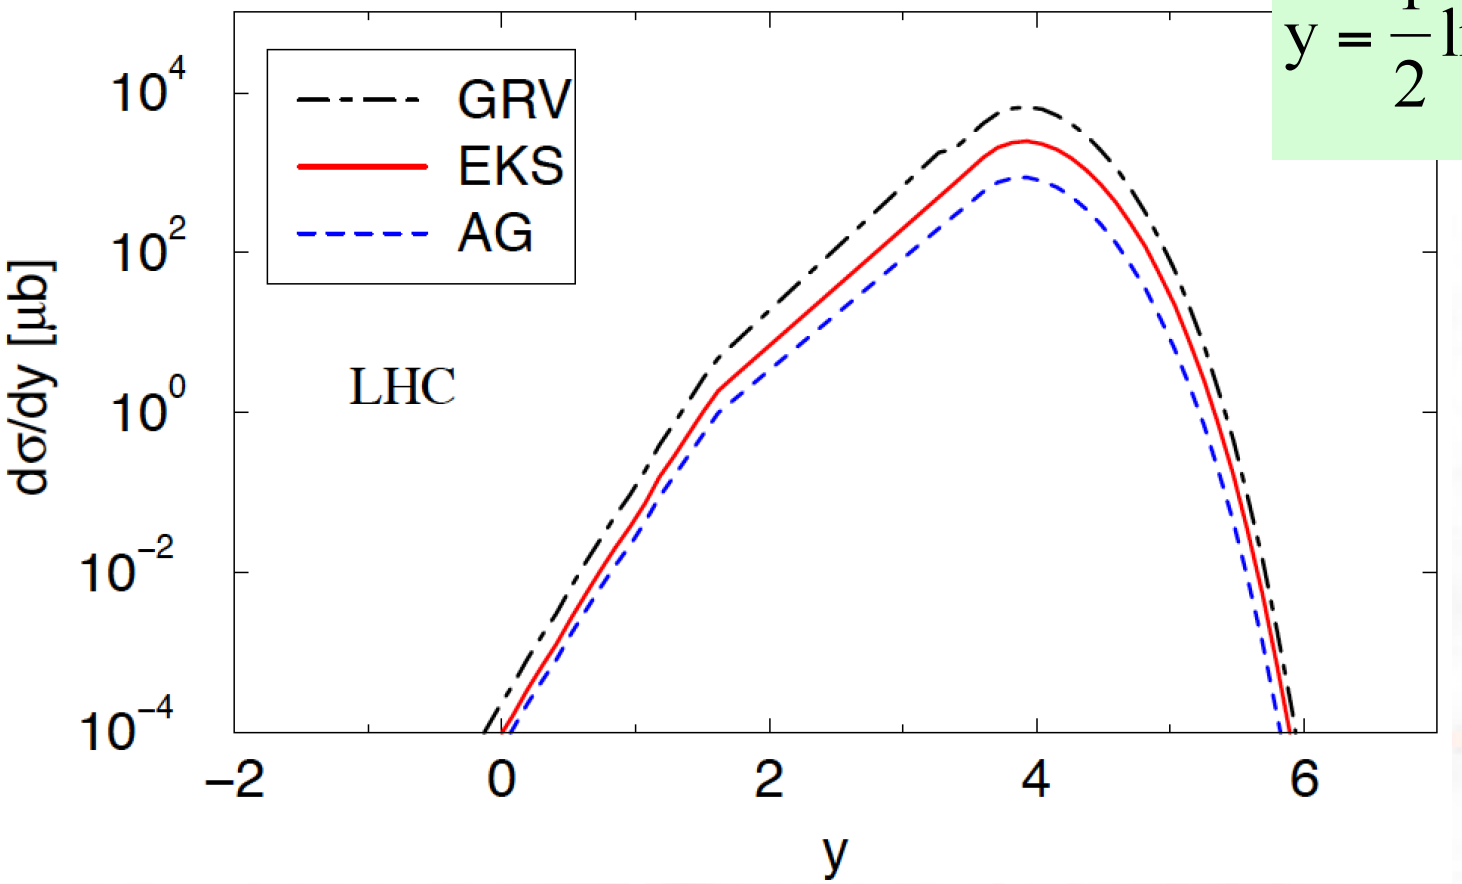
Gluon distribution	LHC
GRV	6.6 mb
EKS	2.5 mb
AG	0.9 mb



Energy dependence of the elastic photoproduction of J/ψ for distinct nuclear gluon distributions (A = 208).

J/ψ production at the LHC

$$y = \frac{1}{2}\ln\frac{\omega}{\sqrt{|t_{min}|}} = \ln\frac{2\omega}{M_{J/\psi}}$$



The rapidity distribution for elastic photoproduction of J/ψ at LHC considering distinct nuclear gluon distributions (A = 208).

→ allows to estimate the magnitude of the EMC, antishadowing, and high density effects.

Nuclear modification of PDFs

Adeluyi, CB, PRC84, 024916 (2011)

$$\sigma(AA \to XXq\bar{q}) = \int \frac{dn}{d\omega}(\omega) \otimes \sigma_{\gamma g \to q\bar{q}} \otimes xG_A(x,Q^2)$$

$$xG_A(x,Q^2) = R_G \otimes xG_N(x,Q^2)$$

$x \le 0.04, \quad R_G < 1$ shadowing

$0.04 \le x \le 0.3, \quad R_G > 1$ anti-shadowing

$0.3 \le x \le 0.8, \quad R_G < 1$ EMC effect

$x > 0.8, \quad R_G > 1$ Fermi motion

pA versus AA collisions

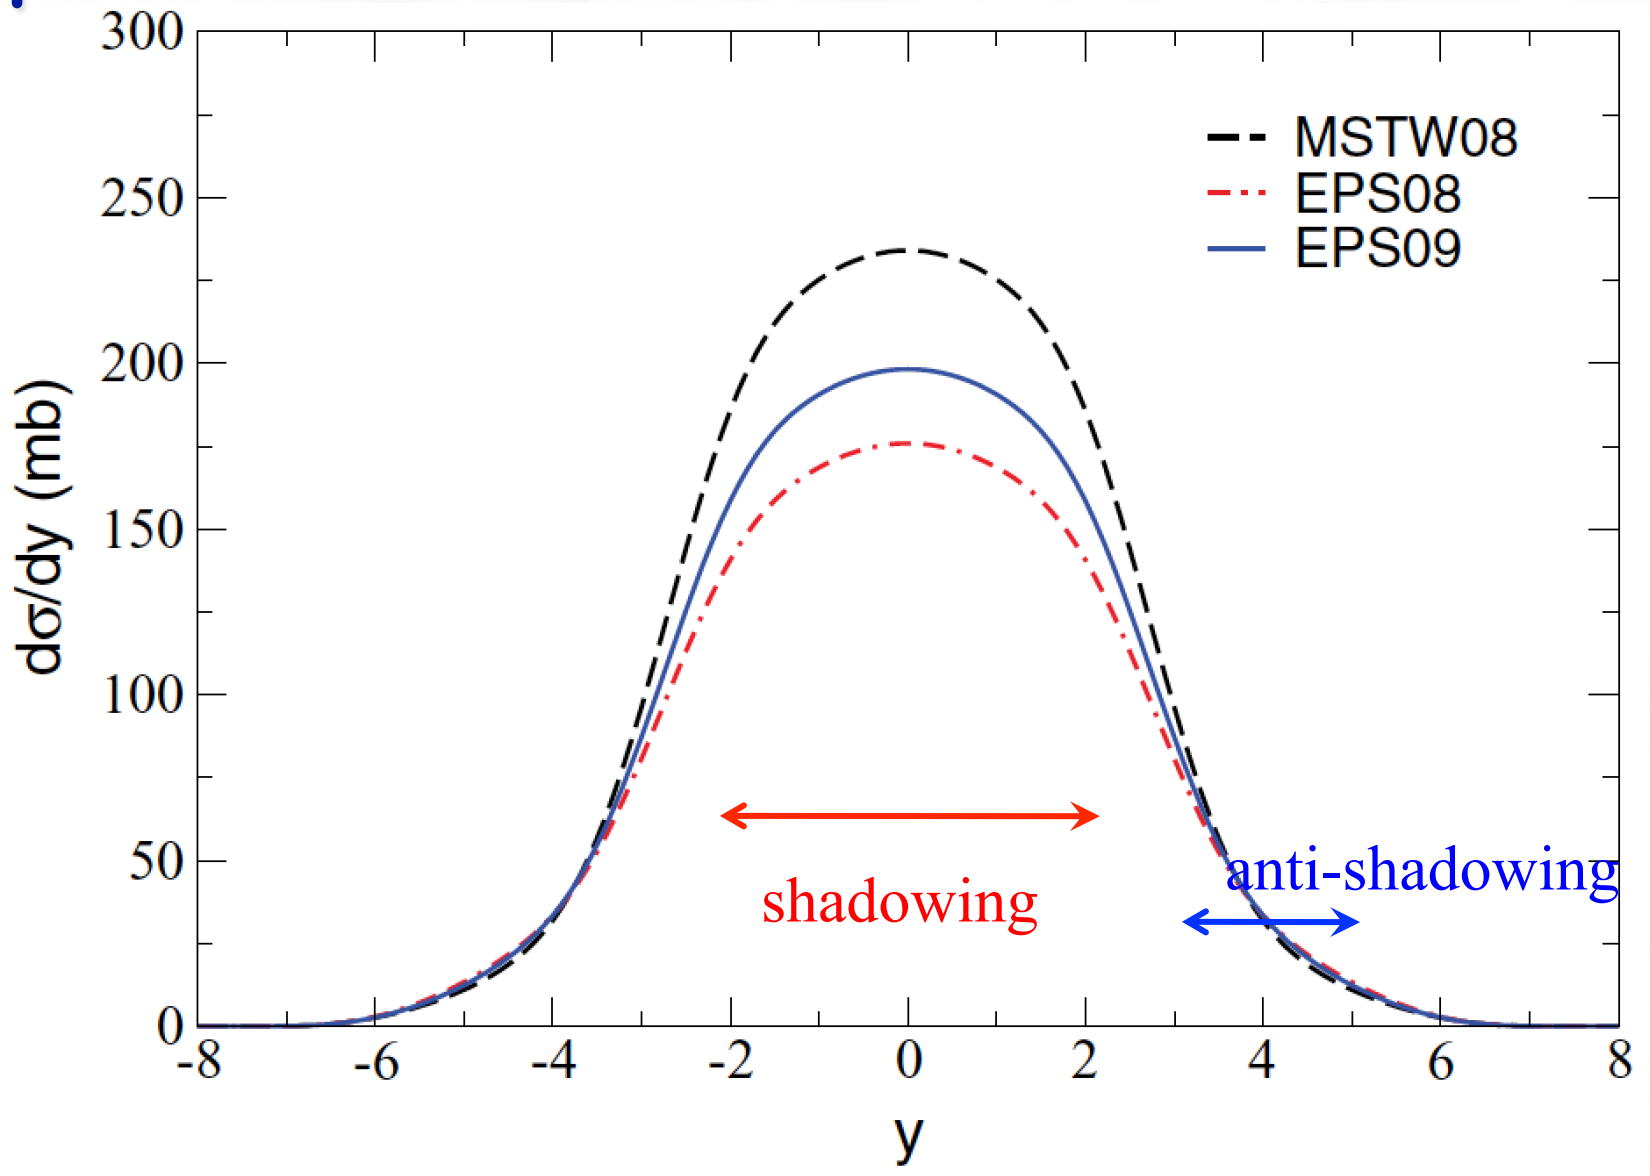
Rapidity distributions of cc̲ photoproduction in pPb collisions at the LHC using the GRV photon parton distributions. In (a) we show the γp and γPb contributions to total rapidity distributions. Dotted line depicts the γp contribution, while the dashed (MSTW08), solid (EPS09), and dash-dotted (EPS08) lines correspond to γ Pb contributions. In (b) we present total rapidity distributions (sum of γp and γPb contributions).

pA versus AA collisions



Total rapidity distributions of the photoproduction of cc̲ in PbPb collisions at the LHC using the GRV photon parton distributions. Dashed line depicts result using the MSTW08 gluon distribution. Solid and dash-dotted lines are results from nuclear-modified gluon distributions from EPS09 and EPS08.

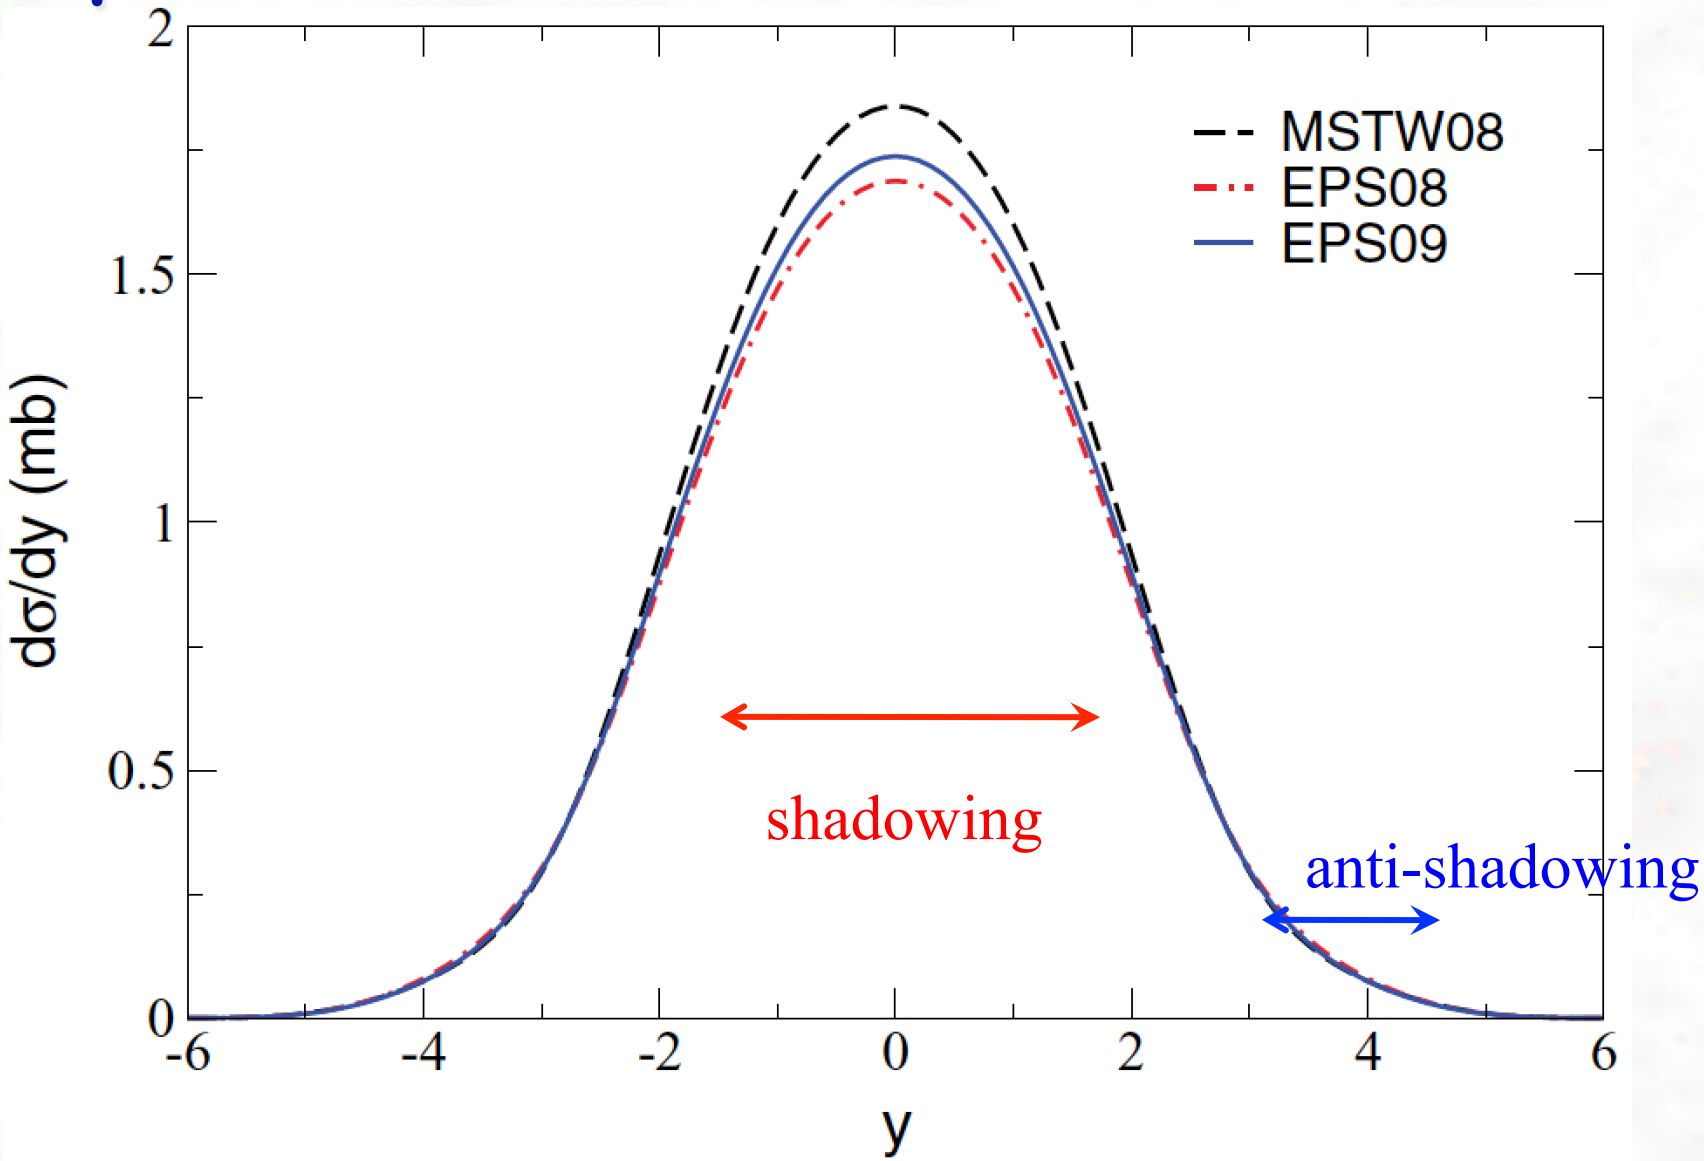
γA	EPS08	3972	1936	2872	3451
	EPS09	4409	1988	2942	3543

Cross sections for photoproduction of b$\underline{\text{b}}$ in ultraperipheral pPb collisions at the LHC. All cross sections are in **nanobarns (nb)**.

PDF	direct	Resolved		
		SaS1d	GRV	CJK
MSTW08	6227	1076	1468	1800
EPS08	5812	1097	1516	1867
EPS09	5992	1085	1496	1842

Cross sections for photoproduction of b$\underline{\text{b}}$ in ultraperipheral PbPb collisions at the LHC. All cross sections are in **microbarns (μb)**.

pA versus AA collisions



Total rapidity distributions of $b\underline{b}$ photoproduction in PbPb collisions at the LHC using the GRV photon PDF. Dashed line depicts result using the MSTW08 gluon distribution (no nuclear modifications). Solid and dash-dotted lines are results from nuclear-modified distributions from EPS09 and EPS08.

pA versus AA collisions

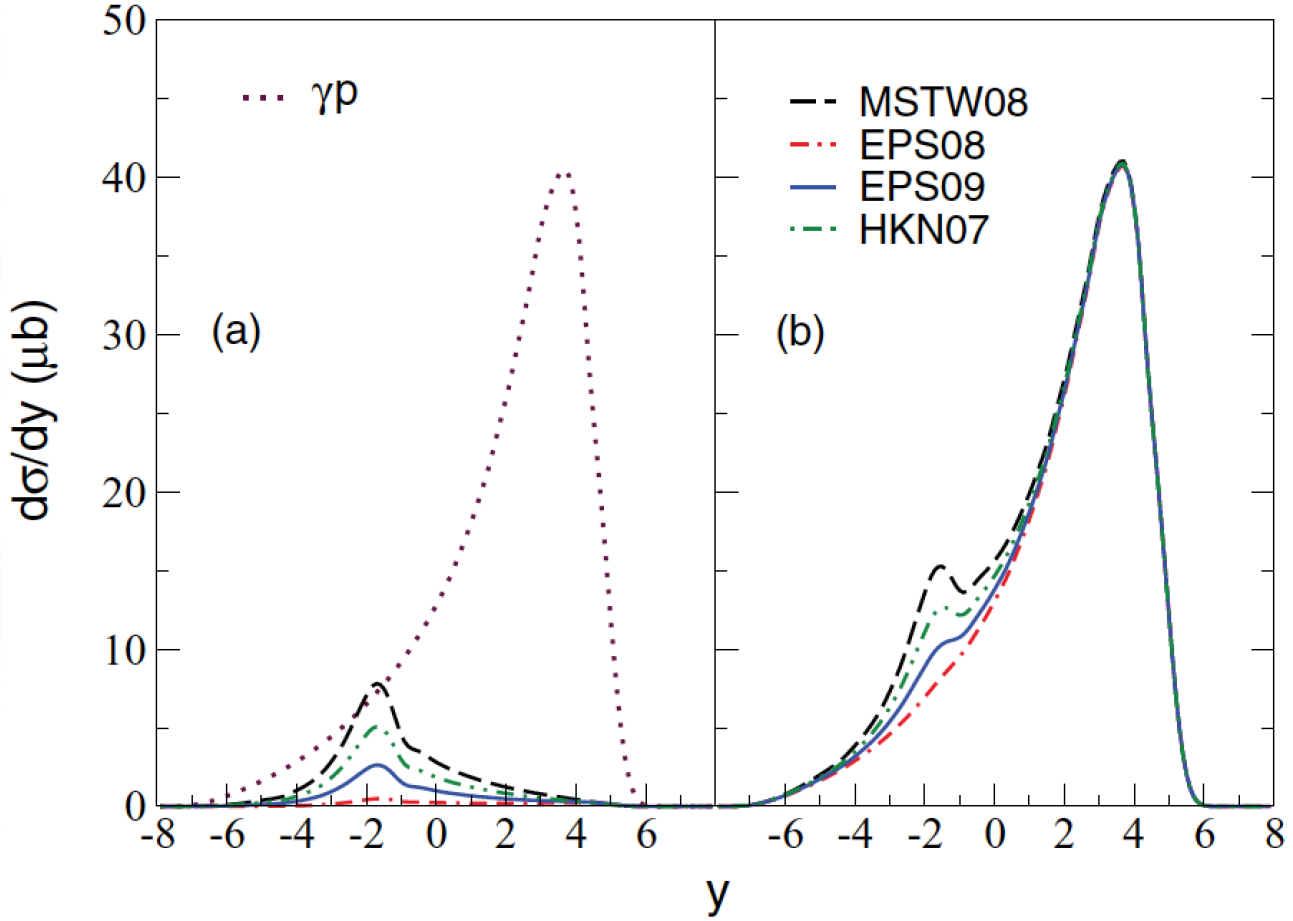
	γp	γA	total
MSTW08	167.3	23.6	190.9
EPS08		2.2	169.5
EPS09		8.5	175.8
HKN07		15.4	182.7

Cross sections **(in μb)** for elastic photoproduction of J/ψ in ultraperipheral pPb collisions at the LHC. Second and third columns are the contributions from γp and γPb. The sums of the two contributions are presented in the fourth column.

	Cross section (μb)
MSTW08	74
EPS08	10
EPS09	29
HKN07	49

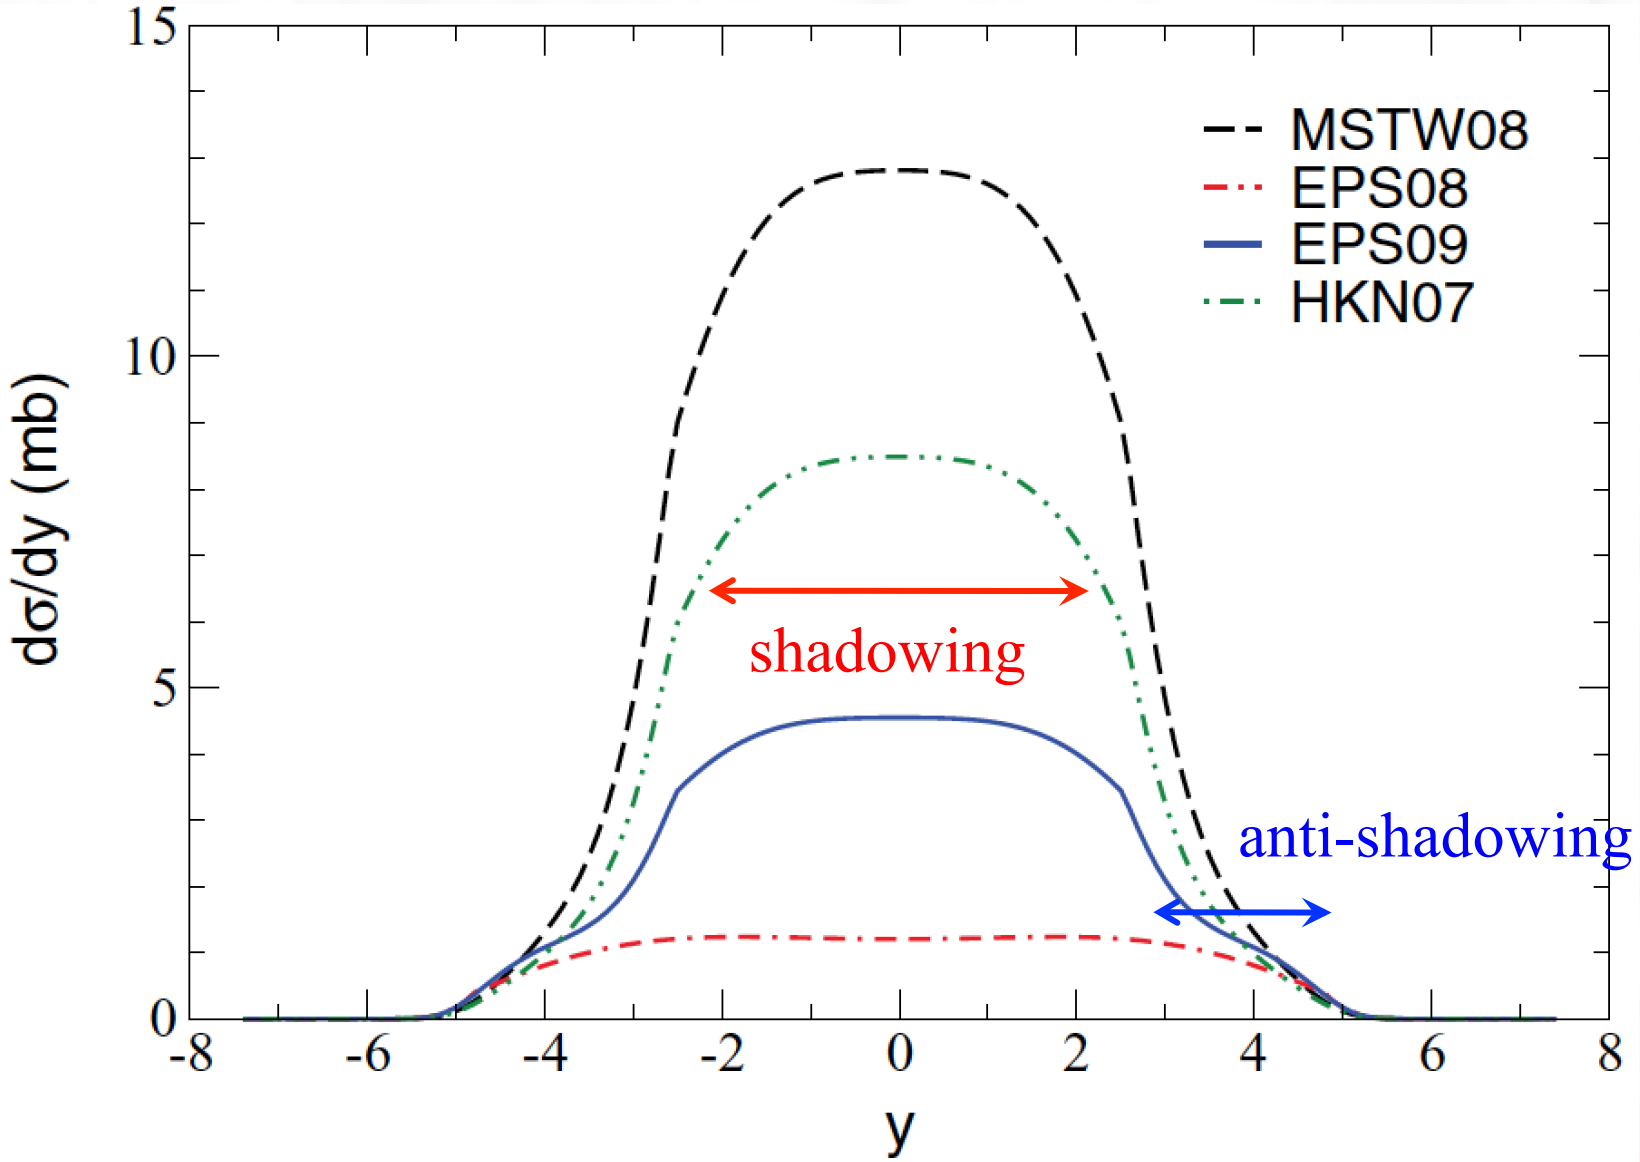
Total cross sections **(in mb)** for elastic photoproduction of J/ψ in ultraperipheral PbPb collisions at the LHC.

pA versus AA collisions



Rapidity distributions of exclusive photoproduction of J/ψ in pPb collisions at the LHC. In (a) we show the γp and γPb contributions to total rapidity distributions. Dotted line depicts the γp contribution while the dashed (MSTW08), dash double- dotted (HKN07), solid (EPS09), and dash-dotted (EPS08)lines correspond to γPb contributions with no shadowing, weak shadowing, moderate shadowing, and strong shadowing, respectively. In (b) we present total rapidity distributions (sum of γp and γPb contributions).

pA versus AA collisions



Total rapidity distributions of exclusive photoproduction of J/ψ in PbPb collisions at the LHC. Dashed line depicts results using the MSTW08 gluon distribution. Solid, dash-dotted, and dash-double-dotted lines are results from nuclear-modified gluon distributions from EPS09, EPS08, and HKN07.

pA versus AA collisions

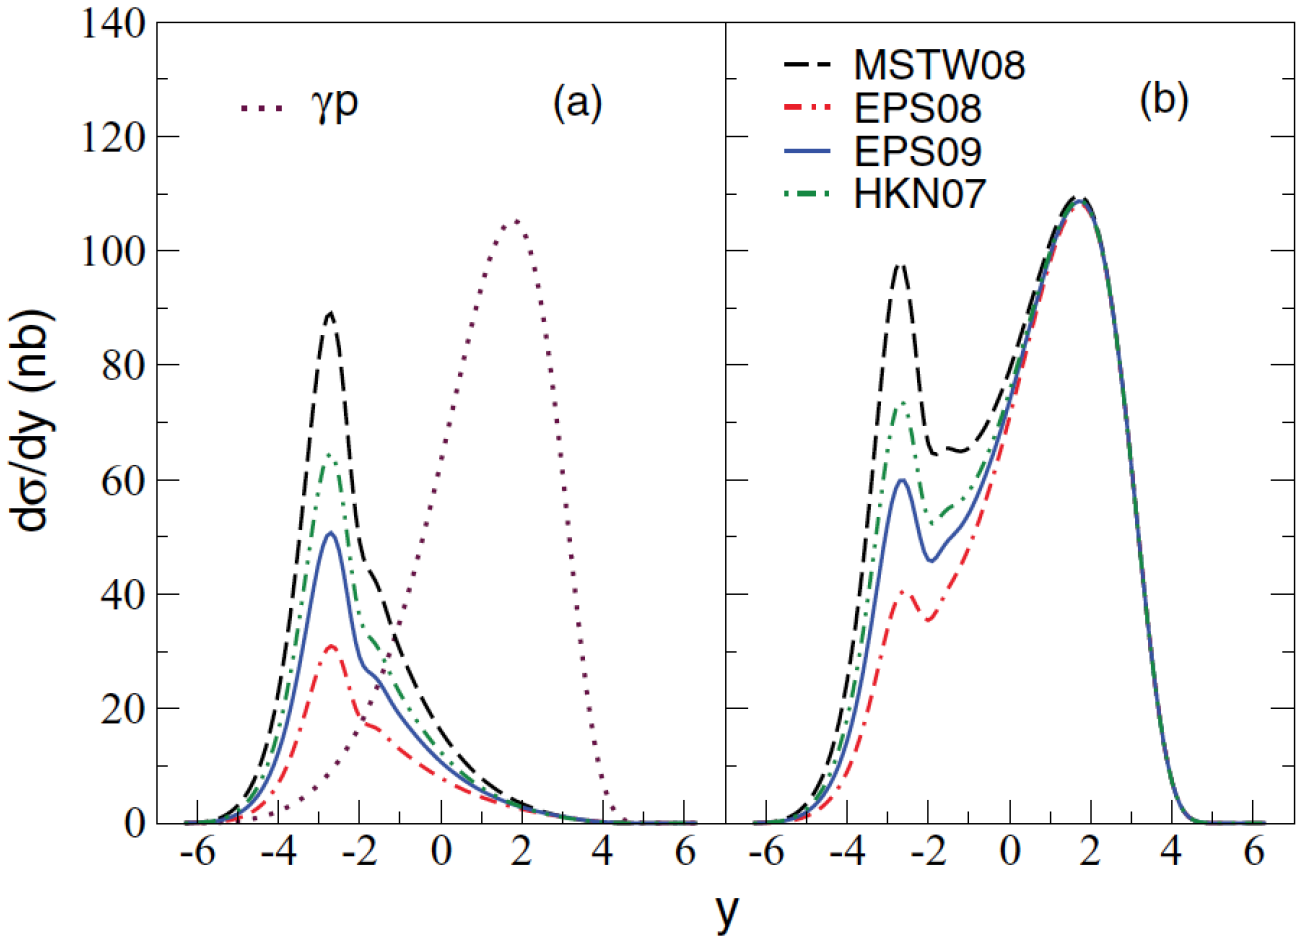
	γp	γA	total
MSTW08	390	219	609
EPS08		84	474
EPS09		130	520
HKN07		161	551

Total cross sections **(in nb)** for elastic photoproduction of $\Upsilon(1s)$ in ultraperipheral pPb collisions at the LHC. Second and third columns are the contributions from γp and γPb. The sums of the two contributions are presented in the fourth column.

	Cross section
MSTW08	189
EPS08	99
EPS09	130
HKN07	146

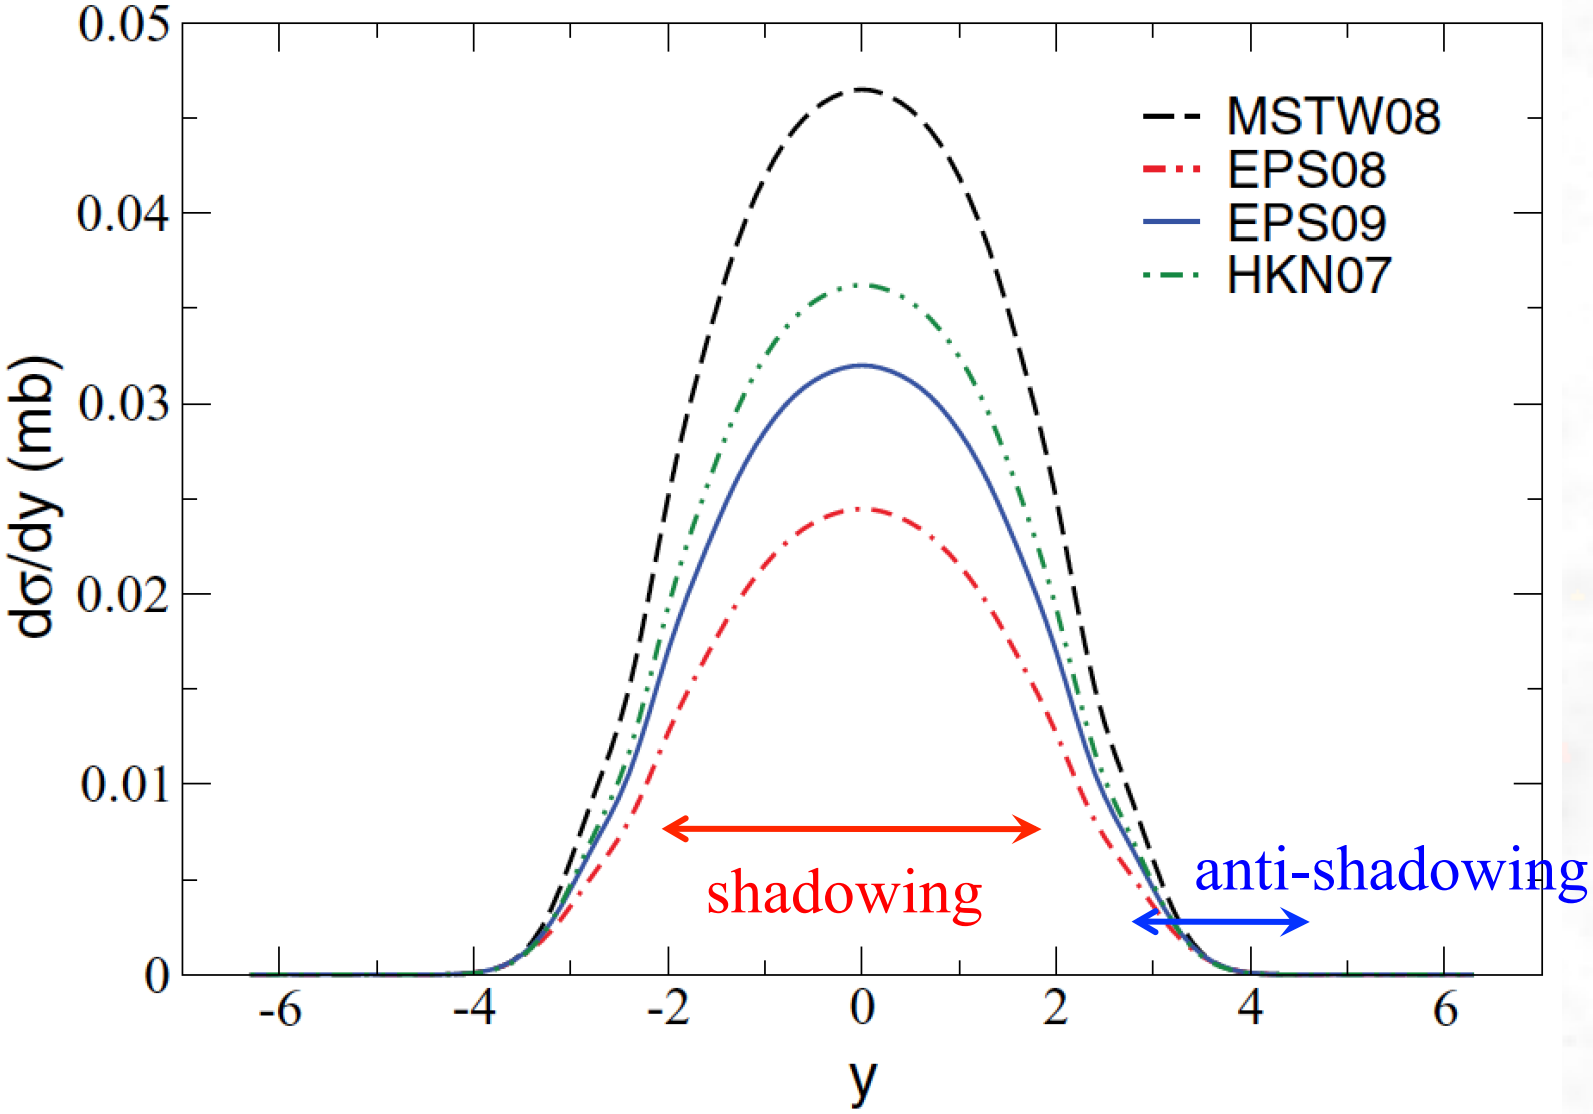
Total cross sections **(in μb)** for elastic photoproduction of $\Upsilon(1s)$ in ultraperipheral PbPb collisions at the LHC.

pA versus AA collisions



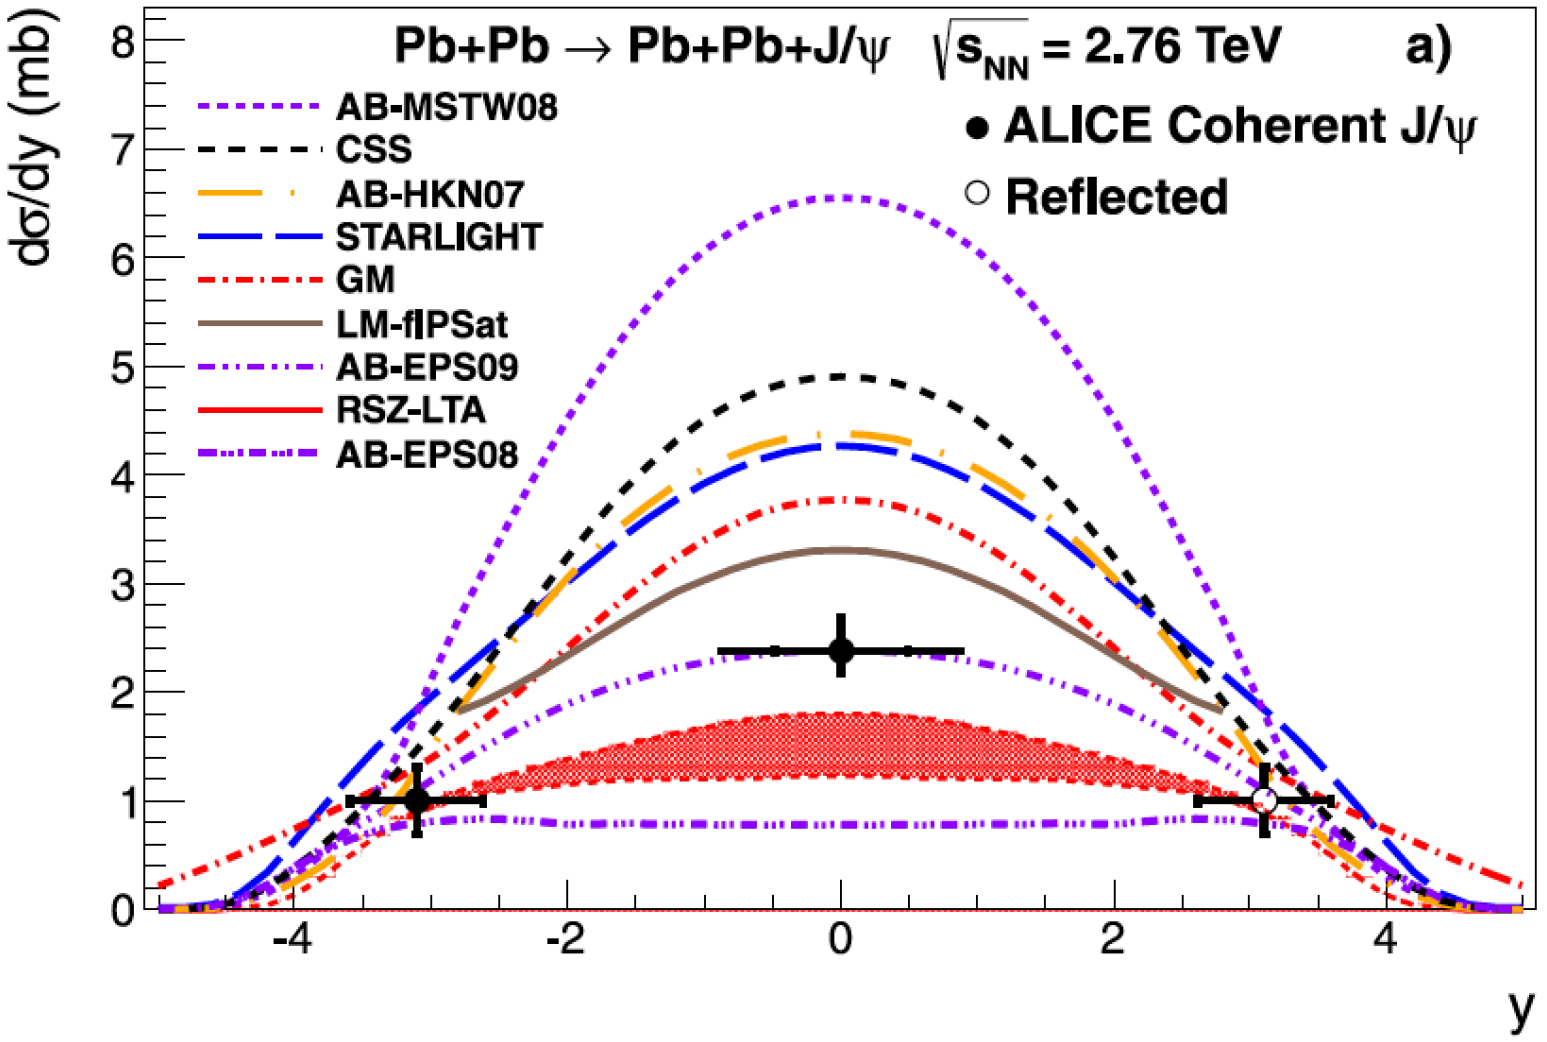
Rapidity distributions of exclusive photoproduction of $\Upsilon(1s)$ in pPb collisions at the LHC. In (a) we show the γp and γPb contributions to total rapidity distributions. Dotted line depicts the γp contribution while the dashed (MSTW08), dash double-dotted (HKN07), solid (EPS09), and dash-dotted (EPS08) lines correspond to γ Pb contributions with no shadowing, weak shadowing, moderate shadowing, and strong shadowing, respectively. In (b) we present total rapidity distributions (sum of γp and γ Pb contributions).

pA versus AA collisions



Total rapidity distributions of exclusive photoproduction of $\Upsilon(1s)$ in PbPb collisions at the LHC in the modified hard sphere density distribution approximation. Dashed line depicts result using the MSTW08 gluon distribution. Solid, dash-dotted, and dash-double-dotted lines are results from nuclear-modified gluon distributions from EPS09, EPS08, and HKN0.

PDFs at the LHC



De Gruttola et al., NPA (2014)

Comparison among the published value of the cross section at forward rapidity, the result at central rapidities and several theoretical models. The error is the quadratic sum of the statistical and systematic errors.

Summary

- Don't steal particle accelerators from physics beyond the SM
- However, they can be very useful for complementary studies (e.g. $\gamma^* + \Lambda \rightarrow \Sigma^0$ and Σ^0 lifetime)
  - Witnesses: - antihydrogen (CERN 1996)
    - multiphonon giant resonances (GSI 1992)
    - alternatives for nuclear astrophysics (everywhere but CERN)
    - QFT of bound states (nowhere)
    - PDFs (RHIC, CERN)
