Semileptonic decays of B mesons at BaBar

Thursday, 18 July 2013 10:00 (15 minutes)

We report on recent results of studies of semileptonic B decays with the BaBar detector.
In particular, we discuss the determination of |Vub| and |Vcb| from both recent exclusive and inclusive measurements.
These include the measurement of the exclusive B -> pi/eta/eta'/omega l nu decays with tagged and untagged event reconstruction, the study of the qˆ2 and lepton energy distribution in inclusive B -> Xu l nu, and the study of untagged B -> D/D*/D* l nu decays.
