## **The latest results from T2K on the neutrino oscillation and interactions**

*Friday 19 July 2013 14:30 (25 minutes)*

The Tokai to Kamioka (T2K) experiment is a long baseline neutrino oscillation experiment situated in Japan. A high intensity neutrino beam is produced at the Japan Proton Accelerator Research Complex, in Tokai, Japan. A near detector complex, situated 280 m from the neutrino production target, and the far detector at 295 km, are used to detect the neutrinos from this beam. This talk will present the latest T2K results on the neutrino oscillation, using the data collected up to summer 2013. We, T2K collaboration, is aiming to release brand new results at this presentation.

**Presenter:** WILKING, Michael (TRIUMF)

**Session Classification:** Neutrino Physics

**Track Classification:** Neutrino Physics
