# IP beam feedback concept

Last line of defence  
against relative  
beam misalignment

Measure vertical  
position of outgoing  
beam and hence  
beam-beam kick  
angle

Use fast amplifier and  
kicker to correct  
vertical position of  
beam incoming to IR

**FONT – Feedback On Nanosecond Timescales**

# General considerations

---

## Time structure of bunch train:

ILC (500 GeV): c. 1300 bunches w. c. 500 ns separation

CLIC (3 TeV): c. 300 bunches w. c. 0.5 ns separation

## Feedback latency:

ILC: O(100ns) latency budget allows **digital** approach

CLIC: O(10ns) latency requires **analogue** approach

Recall speed of light:  $c = 30 \text{ cm / ns}$ :

**FB hardware should be close to IP (especially for CLIC!)**

**Two systems, one on each side of IP, allow for redundancy**

# IP FB Design Status: ILC

---

Engineering design documented in ILC TDR (2013):

**1. IP beam position feedback:**

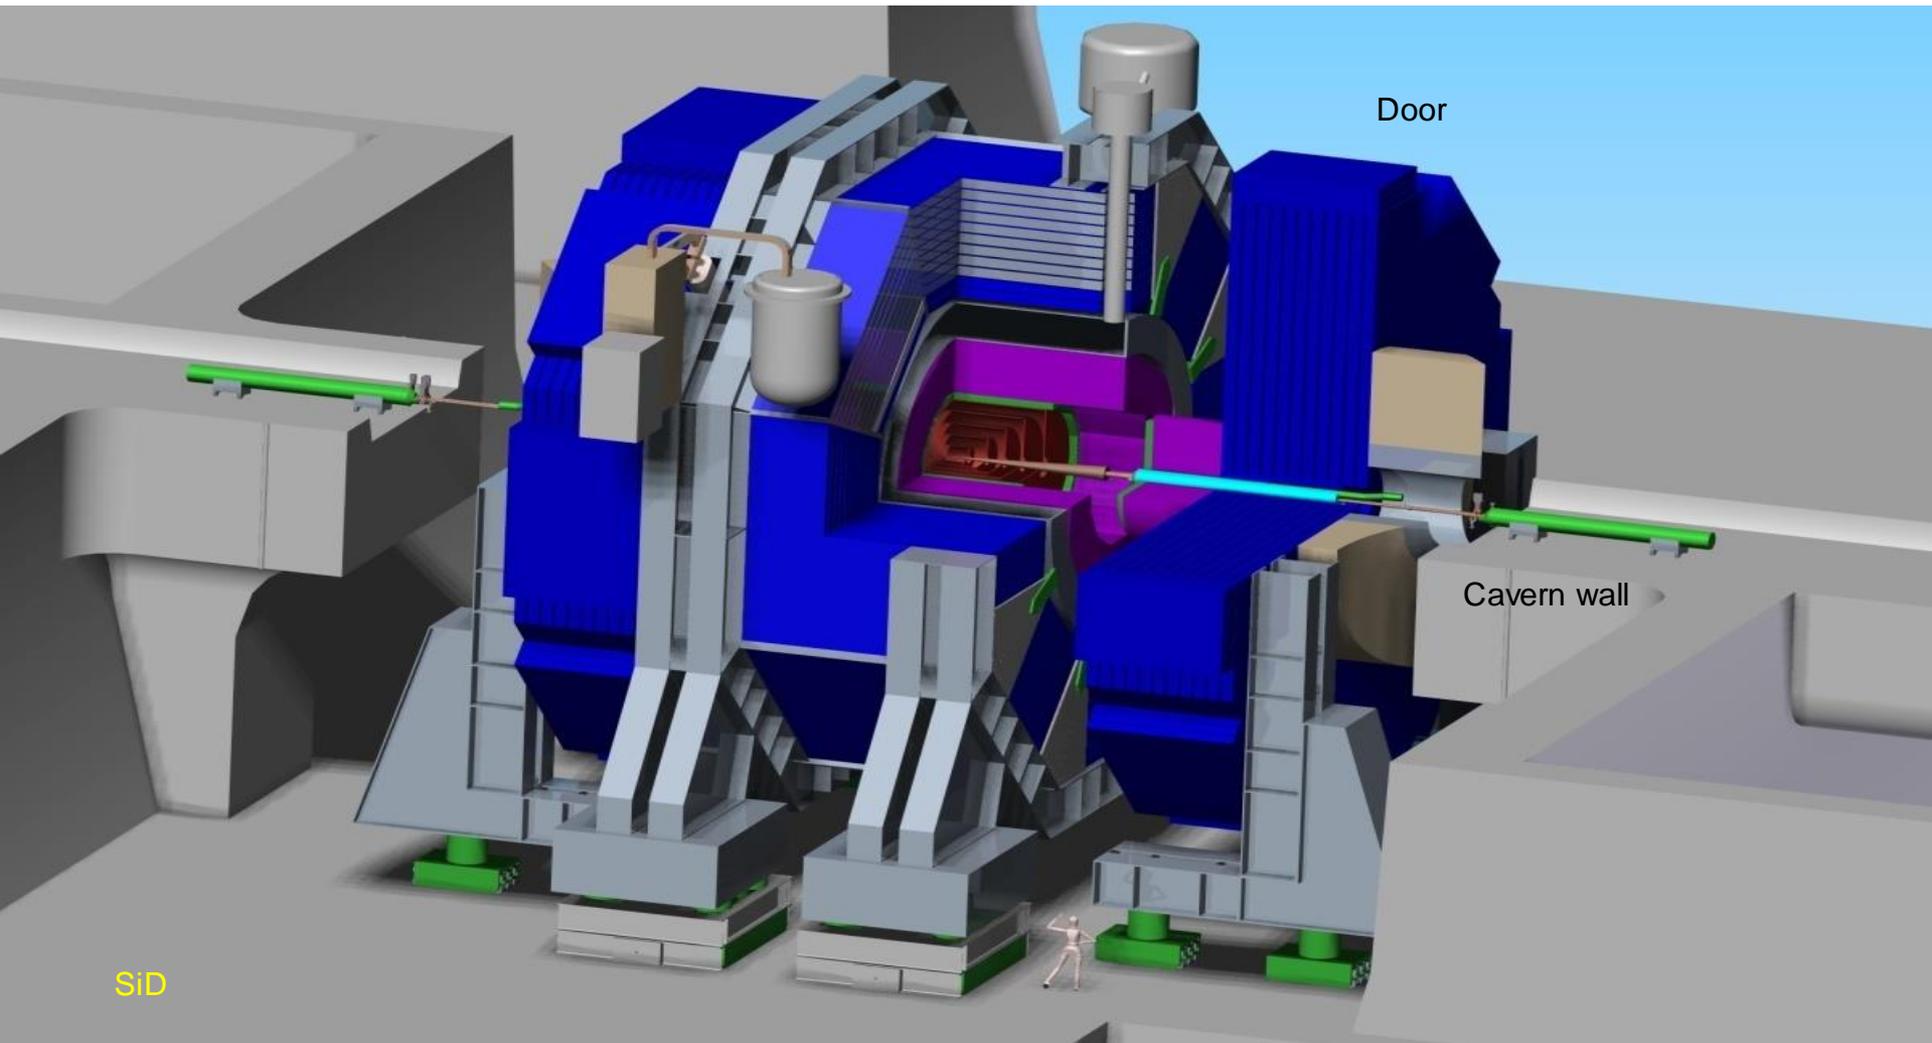

**beam position correction up to  $\pm 300$  nm vertical at IP**

**2. IP beam angle feedback: hardware located few 100 metres upstream  
conceptually very similar to position FB, less critical**

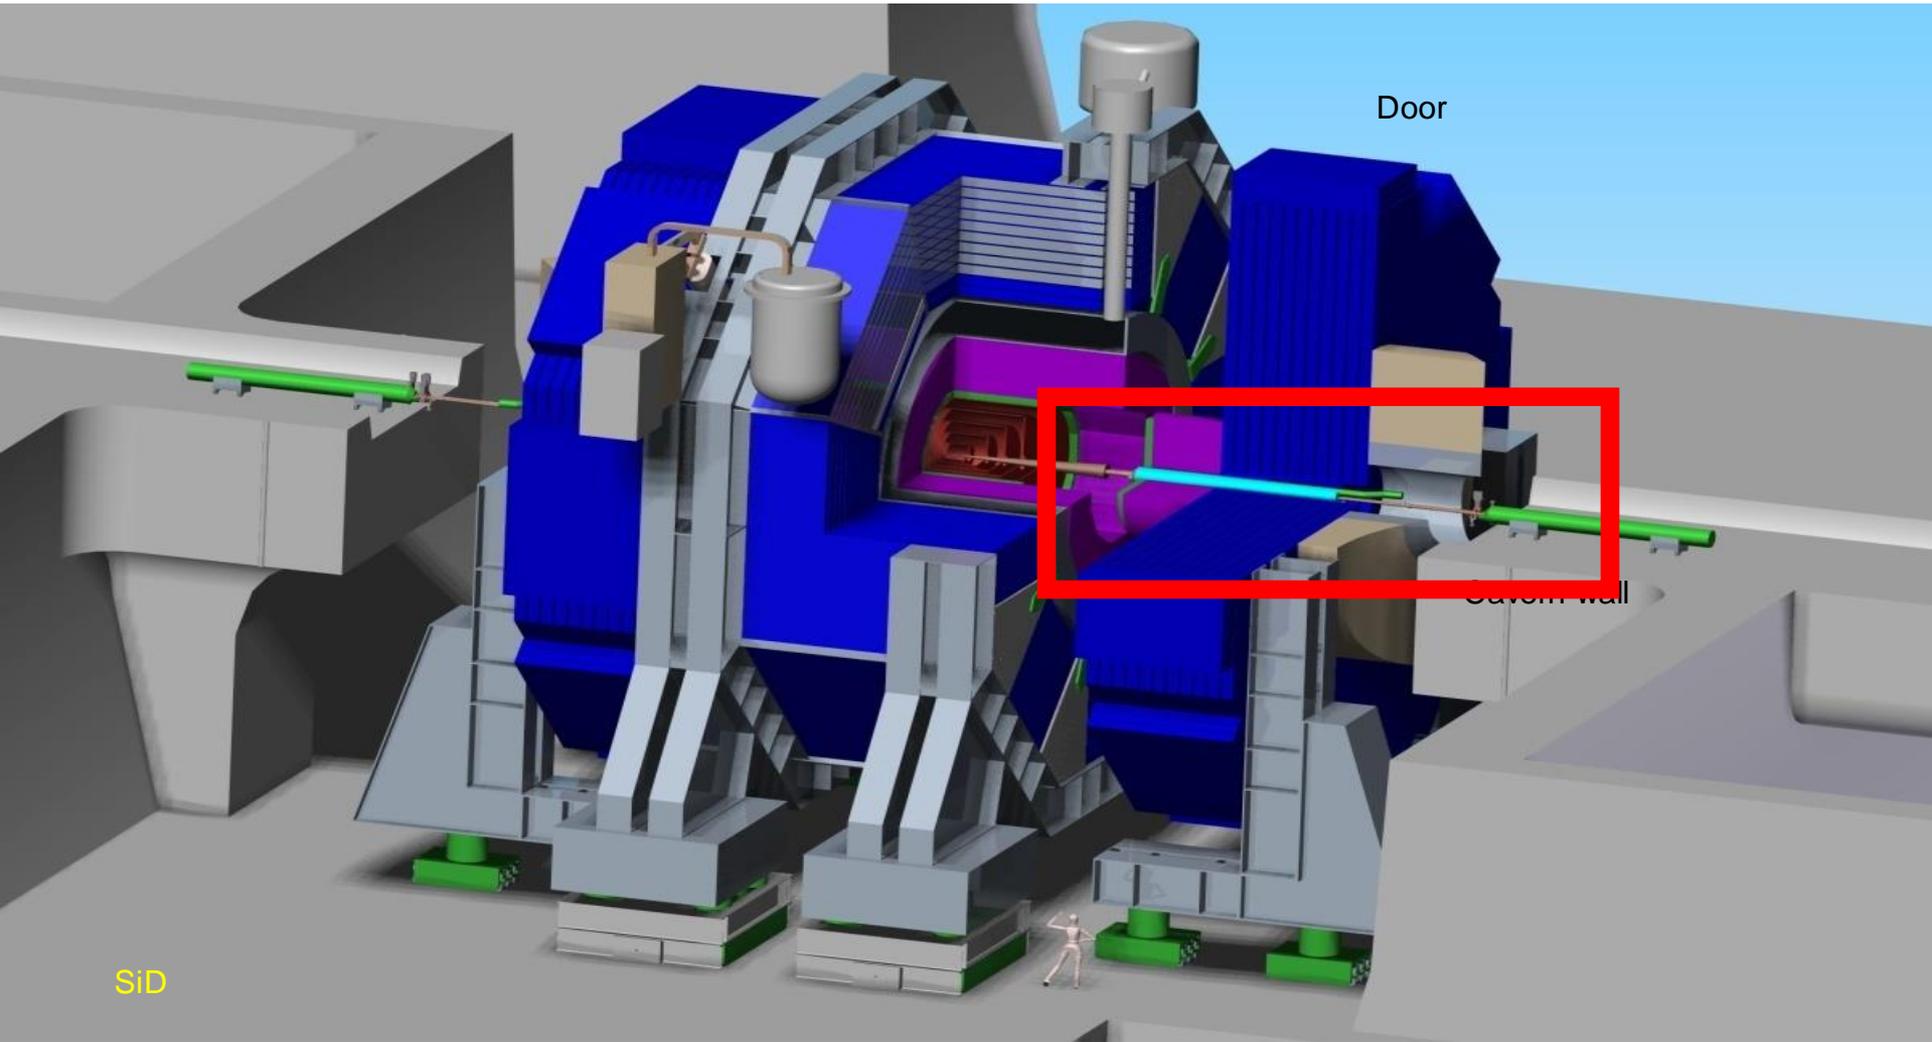

**3. Bunch-by-bunch luminosity signal (from 'BEAMCAL')**

**'special' systems requiring dedicated hardware + data links**

**BPM resolution** < 0.5um  
**Latency** ~ 130ns  
**Drive power** > 300nm  
**@ ILC**

# Latency

- Time of flight kicker – BPM: 12ns
- Signal return time BPM – kicker: 32ns
- **Irreducible latency: 44ns**
  
- BPM processor: 10ns
- **ADC/DAC (4.5 357 MHz cycles) 14ns**
- **Signal processing (8 357 MHz cycles) 22ns**
- **FPGA i/o 3ns**
- Amplifier 35ns
- Kicker fill time 3ns
- **Electronics latency: 87ns**
  
- **Total latency budget: 131ns**

# ILC IP FB performance

Resta Lopez

*P.N. Burrows*

*EPS13 Stockholm 20/7/13*

# IP FB Design Status: CLIC

---

**Conceptual design developed and documented in CLIC CDR (2012)**

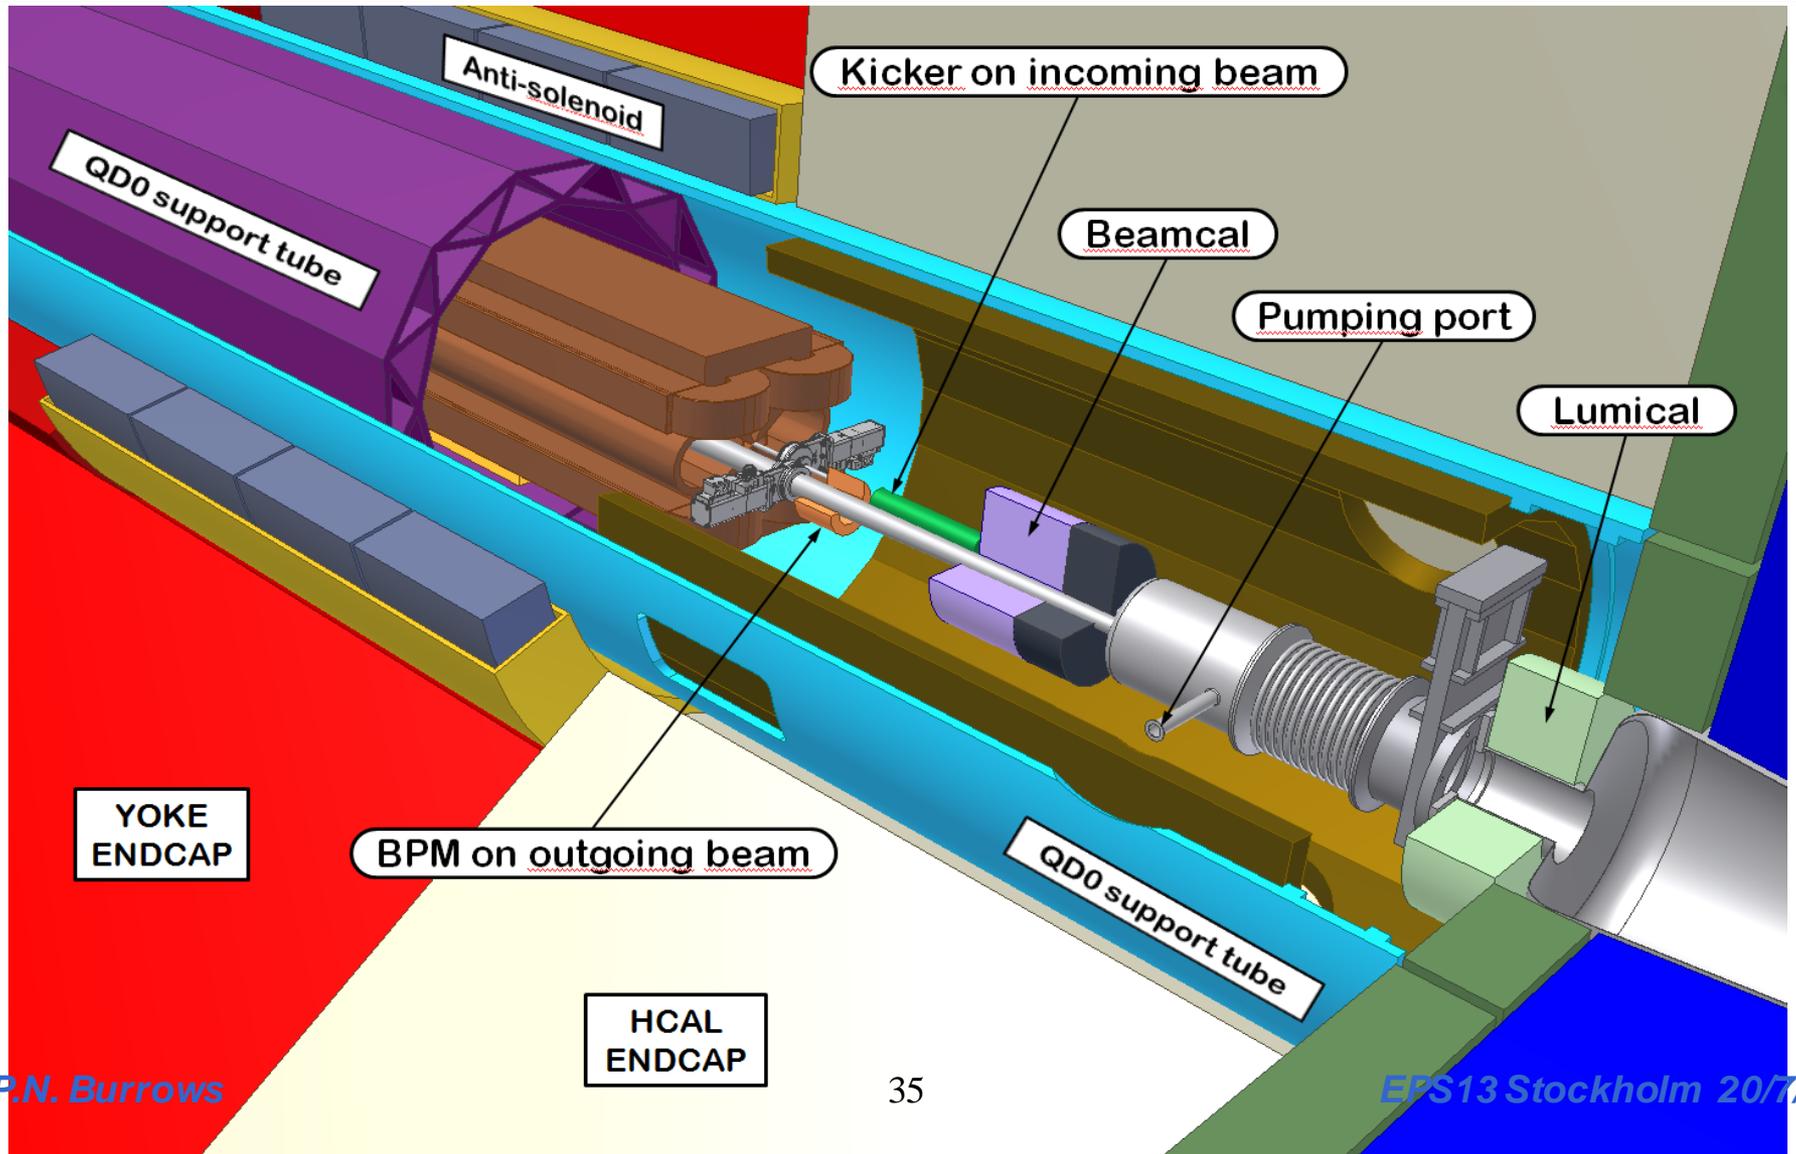

**NB primary method for control of beam collision overlap is via vibration isolation of the FF magnets, and dynamic correction of residual component motions**

**IP position feedback:**

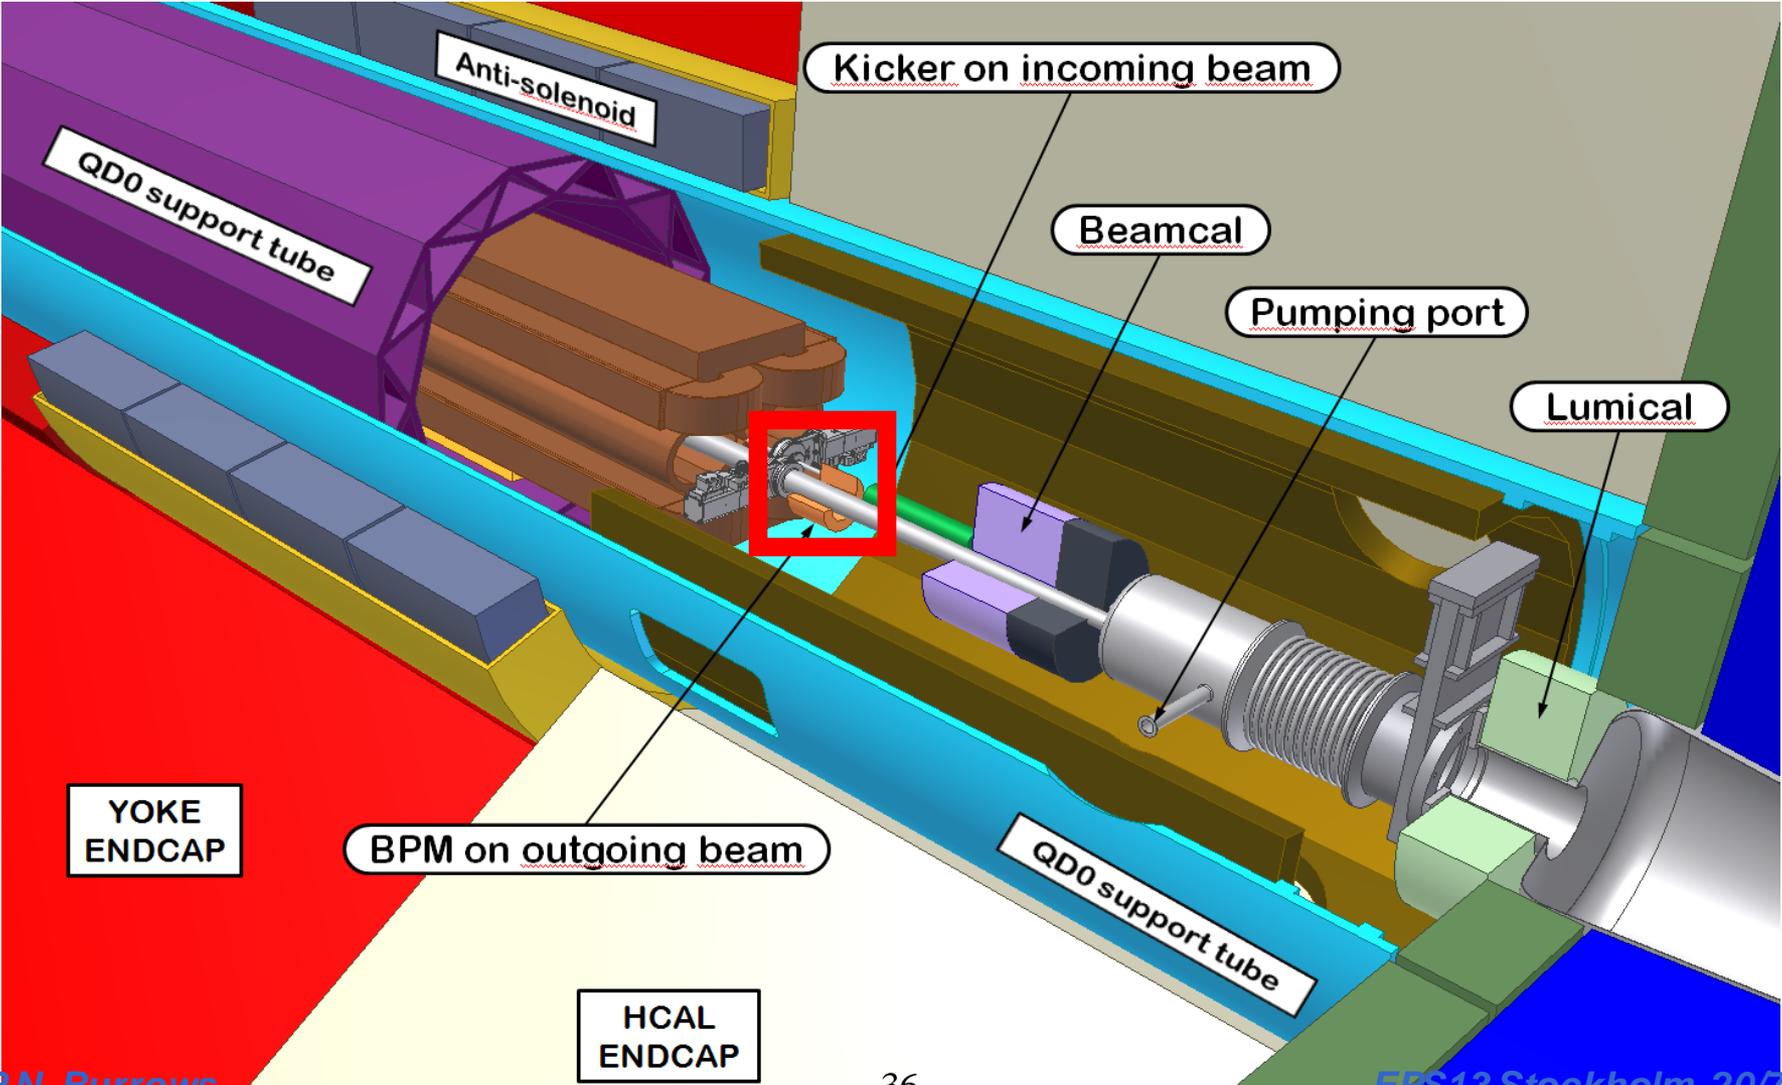

**beam position correction up to  $\pm 50$  nm vertical at IP**

**More realistic engineering design can be developed in next project phase**

P.N. Burrows

# CLIC IP FB performance

For noisy sites:

→ factor 2 - 3 improvement

# Outstanding Technical Issues

---

- **Component designs need to be optimised for tight spatial environments**
- **Routing of cables**
- **Operation of (ferrite) devices in large, spatially-varying B-field**
- **Further studies of radiation environment**
- **Electronics location, rad hardness, shielding**
- **RF interference: beam  $\leftrightarrow$  FB electronics**  
**kicker  $\leftrightarrow$  detector**

# Summary

---

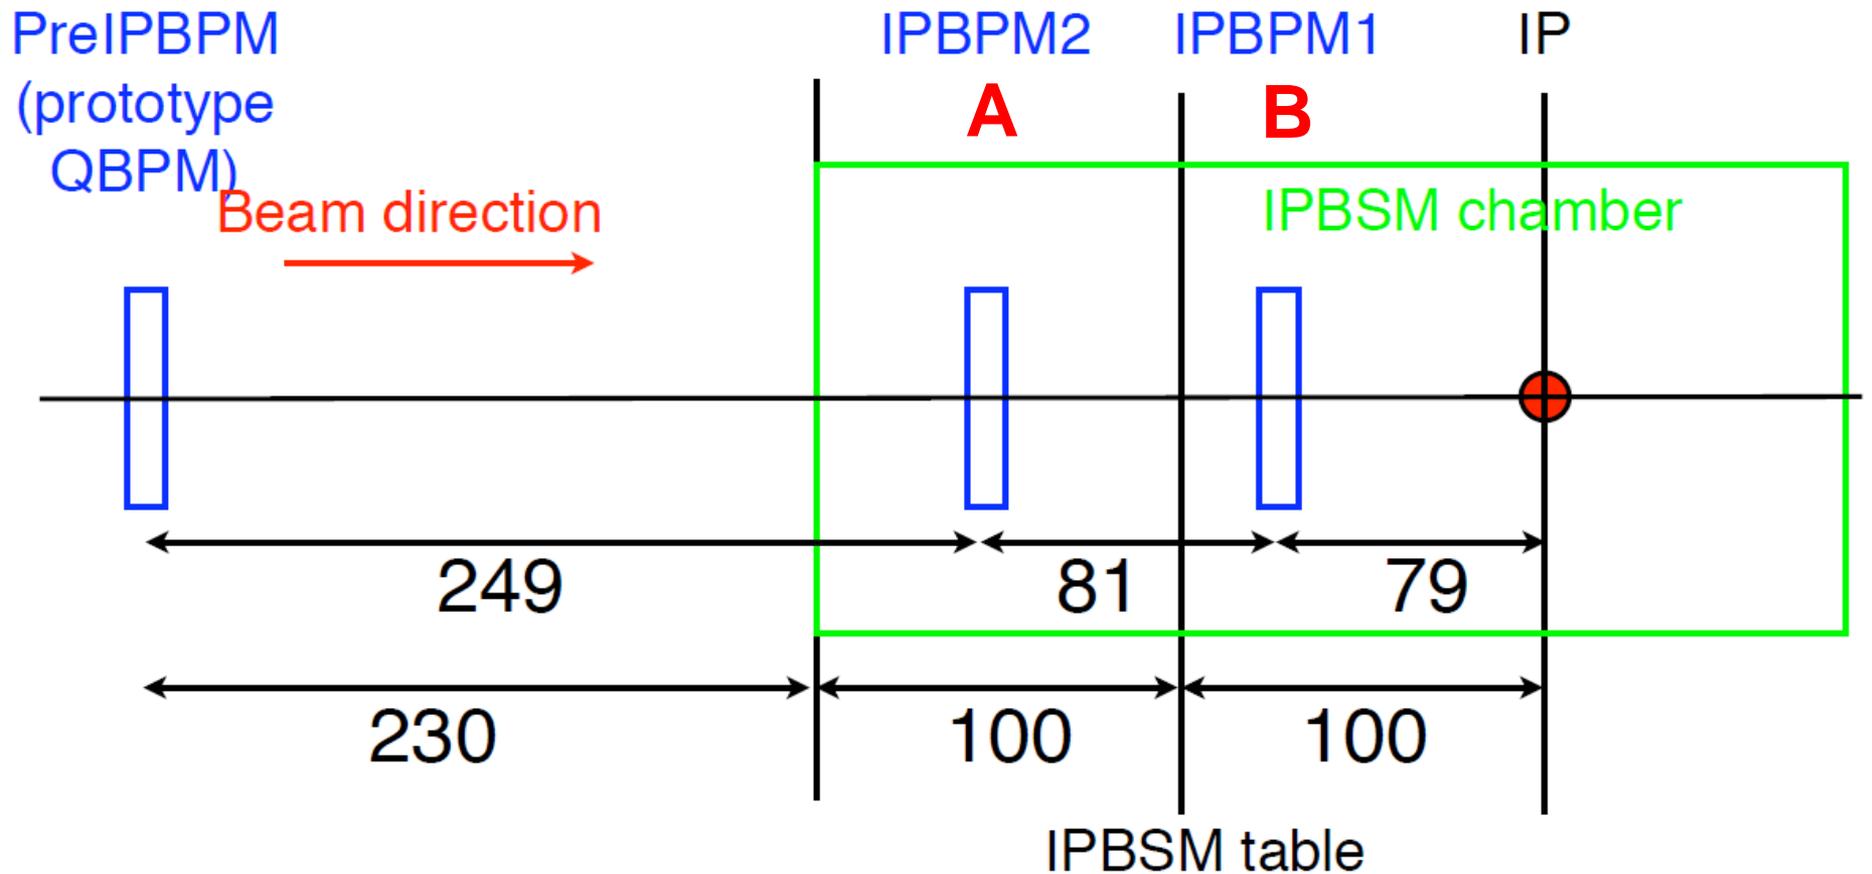

- **Well developed IP collision FB system designs for both ILC and CLIC**
- **Simulations demonstrate luminosity recovery capability**
- **Demonstrated prototypes with required performance parameters**
- **Progress on designing customised beamline components + optimising layout**
- **Ideas applicable at XFELs + rings**

# NEWSFLASH from ATF2

---

- **Beam size ~ 65 nm achieved**
- **First attempts at stabilisation of small beam at nm level**

# ATF2 IP region layout

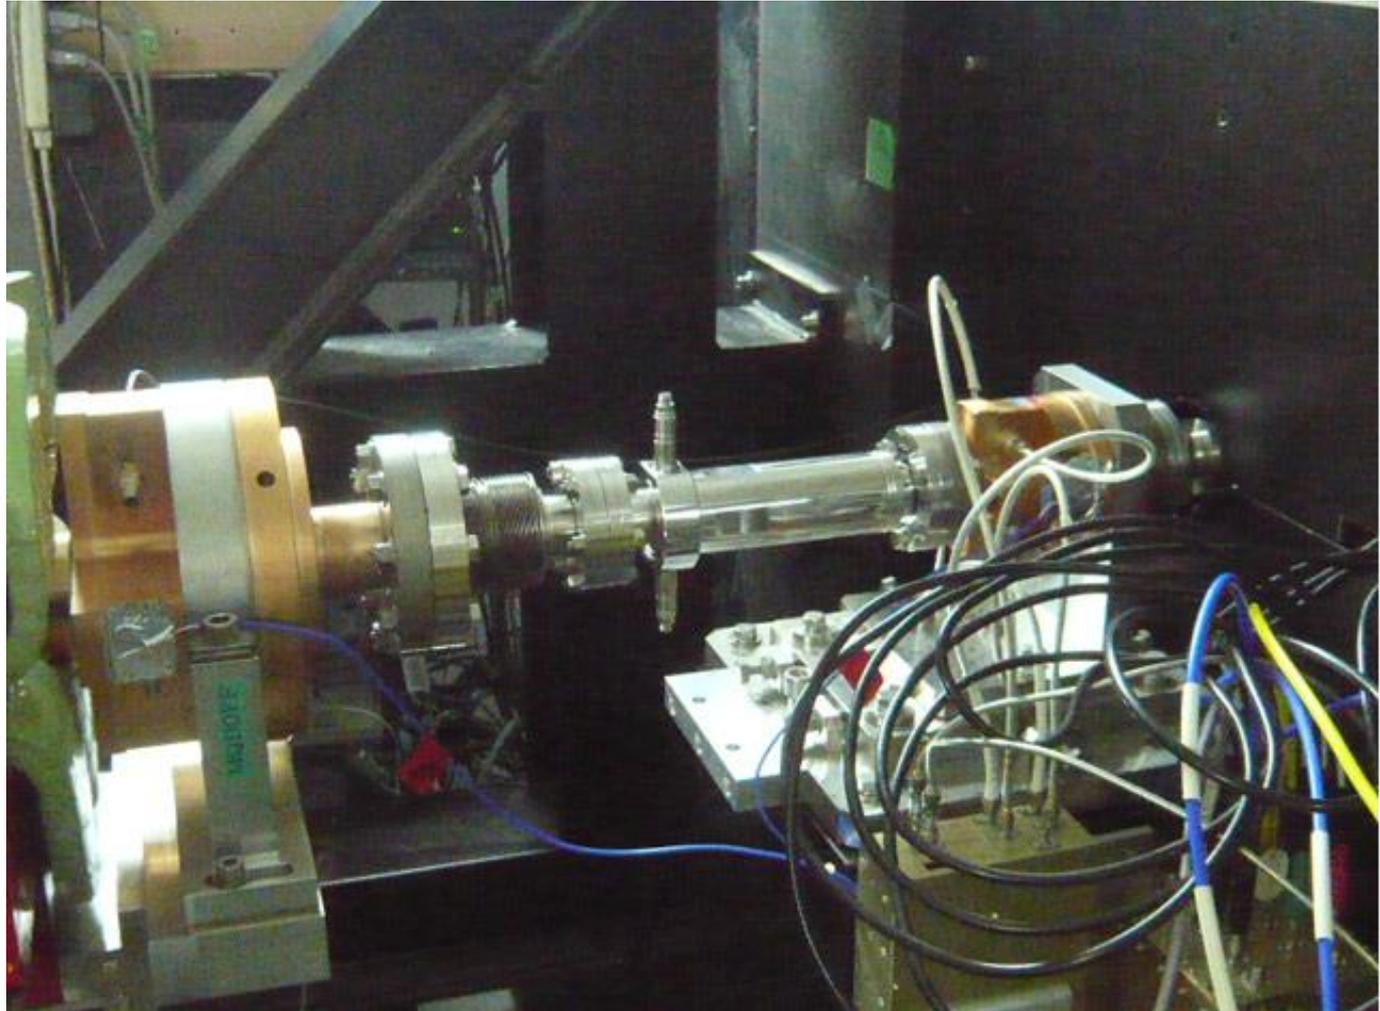

# Layout with new IP kicker

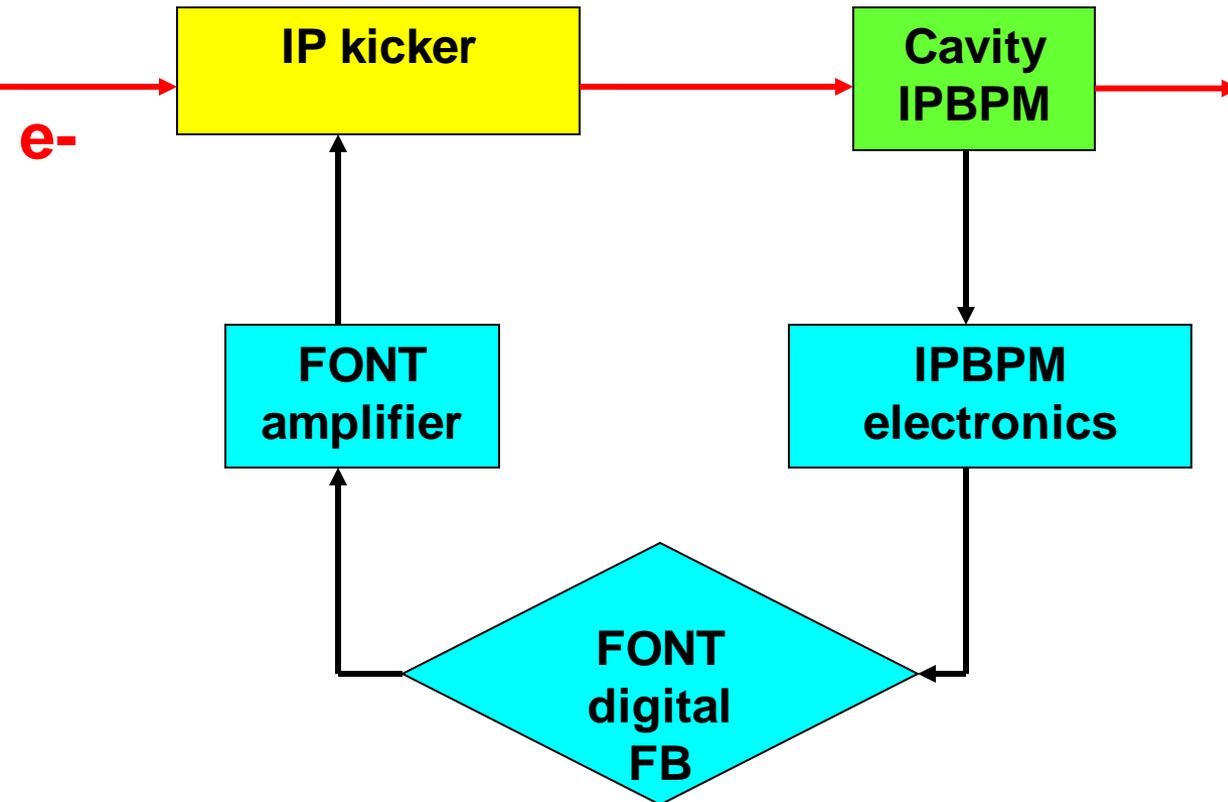

**Designed  
by Oxford**

**Fabrication  
arranged  
by KEK**

**Installed  
May 2012**

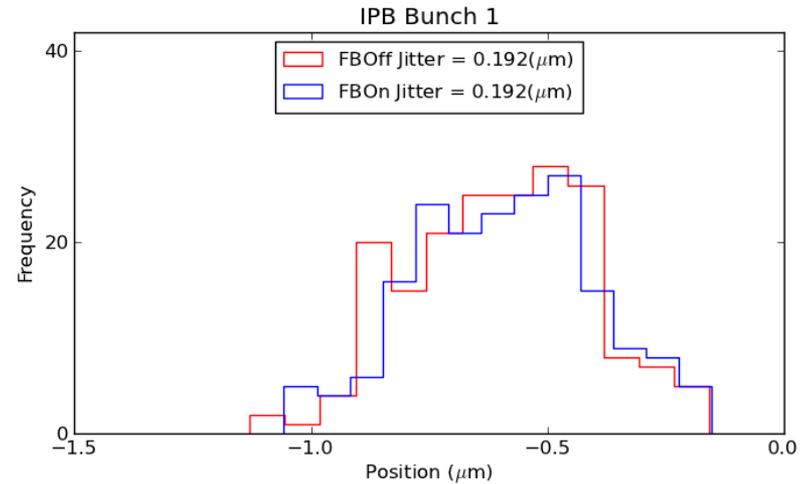

# ATF2 IPFB tests June 2013

# ATF2 IP FB results (June 2013)

**Bunch 1:**  
**Not corrected by FB**  
**Incoming position jitter**  
**~ 200nm**

# ATF2 IP FB results (June 2013)

**Bunch 1:**  
**Not corrected by FB**  
**Incoming position jitter**  
**~ 200nm**

**Bunch 2:**  
**FB off jitter ~ 200nm**

**FB on:**  
**beam zeroed**  
**jitter reduced ~ 100nm**

**PRELIMINARY**
