Particle production in p-Pb and Pb-p collisions at the LHC with LHCb

Thursday, 18 July 2013 11:36 (20 minutes)

With a unique forward acceptance, and excellent vertexing and particle identification capability, LHCb is well-placed to make important contributions to heavy ion physics through measurements performed using data taken during pA and Ap collisions. The first studies of these data will be presented. These include measurements of particle multiplicity and studies of strange and charmed particle and onia production.
