## **CMS Measurements of the Top Quark Mass**

*Friday 19 July 2013 11:40 (20 minutes)*

Measurements of the top quark mass are presented using data collected by the CMS experiment in proton-proton collisions at the LHC at centre-of-mass energies of 7 and 8 TeV. Analyses in several decay channels of top quark pair events are employed to determine the top quark mass. The results are combined and compared to the world average.
