Type: **Poster Presentation**

## **Searches for heavy long-lived sleptons and R-Hadrons with the ATLAS detector in pp collisions at $\sqrt{s} = 8$ TeV**

A search for long-lived particles is presented using the full 2012 data sample from proton-proton collisions at a centre-of-mass energy  $\sqrt{s} = 8$  TeV recorded by the ATLAS detector at the LHC. Long-lived sleptons and R-hadrons are searched for in different scenarios, based on their possible interactions in the inner detector, the calorimeters and the muon spectrometer.
