Measurement of intrinsic top quark properties (top mass, charge, top and W polarisation, and search for FCNC in top decays) with the ATLAS detector

Friday 19 July 2013 17:20 (20 minutes)

Properties of the top quark are measured with the ATLAS detector using the Large Hadron Collider proton-proton collisions data. Measurements of the top quark mass, charge and polarisation, as well as of the polarization of W bosons in top quark decays to probe the Wtb vertex are presented. The search for flavour changing neutral current processes in top quark decays is reviewed.

Presenter: MASETTI, Lucia (Johannes-Gutenberg-Universitaet Mainz (DE))

Session Classification: Top and Electroweak Physics

Track Classification: Top and Electroweak Physics
