Exclusive and semi-exclusive CP Violation studies at

Saturday, 20 July 2013 12:45 (15 minutes)

We present results of the measurements of CP-violating parameters for a variety of b hadron species using the full Run 2 data set collected by the DØ detector. These include a new analysis testing for direct CP violation in B+ decays, and specific semileptonic charge asymmetries of B0s and B0 decays testing for CP violation in mixing.
