WMJUAS

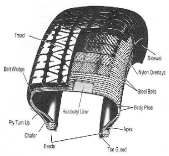
EXAMPLE : Pre-vulcanisation of tires



partial crosslinking before the tire is assembled:

- stabilizes thickness of sections during final thermal curing process
- prevents steel belt from migrating through its supporting rubber layer

- improves manufacturability
- better dimensional stability
- higher quality tire
- more uniform thickness
- better balance
- thinner thus generating less frictional

gloves, masks, gowns
Petri dishes and pipettes

- medical implants

artificial organs
bone grafts
human eyeballs

- pharmaceuticals
- cosmetics

WMJUAS

FOOD TREATMENT

Low Dose Applications (< 1 kGy)
- **Phytosanitary** Insect disinfection (grains, papayas, mangoes, avocados…)
- **Sprouting Inhibition** (potatoes, onions, garlic…)
- **Delaying of maturation, parasite disinfection**

Medium Dose Applications (1 to 10 kGy)
- **Control of foodborne pathogens** (beef, eggs, crab meat, oysters…)
- **Shelf-life extension** (chicken, pork, low fat fish, strawberries, mushrooms…)
- **Spice irradiation**

High Dose Applications (> 10 kGy)
- **Food sterilisation** (meat, poultry, seafood…)
