

## **Status of the Upgrade of the CERN PS Booster**

K. Hanke for the LIU-PSB working group

The CERN PS Booster (PSB) is presently undergoing an ambitious consolidation and upgrade program within the frame of the LHC Injectors Upgrade (LIU) project. The upgrade comprises a new injection scheme for H- injection from CERN's new Linac4, and an energy upgrade of the PSB rings and extraction system from 1.4 to 2.0 GeV. We address in this paper the status and plans for the main upgrade items.
