

SciencePAD

Open Software for Open Science

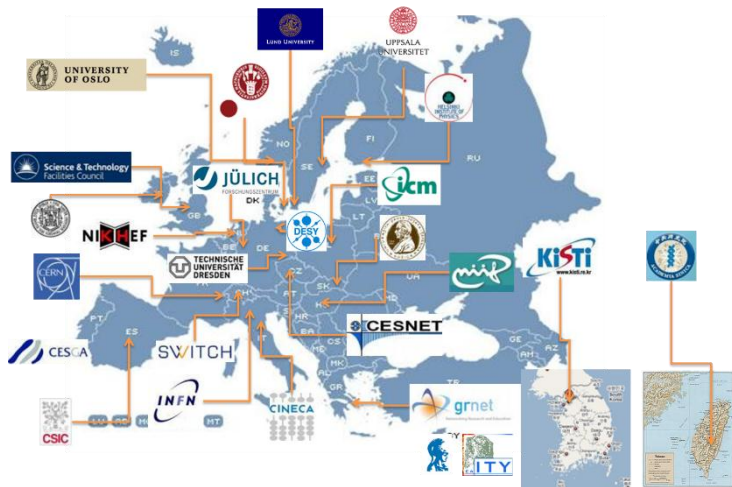

Alberto Di Meglio – CERN

- SciencePAD is a collaboration among several research centres, projects and companies
- Originally born from the experience of the European Middleware Initiative (EMI) project
- It has three major goals
 - Support the formalization of software information and its integration in digital knowledge networks
 - Promote and directly demonstrate the use of formalised information in software services for scientific research
 - Promote the correct adoption and exploitation of open source best practice policies and methods

EMI in a nutshell

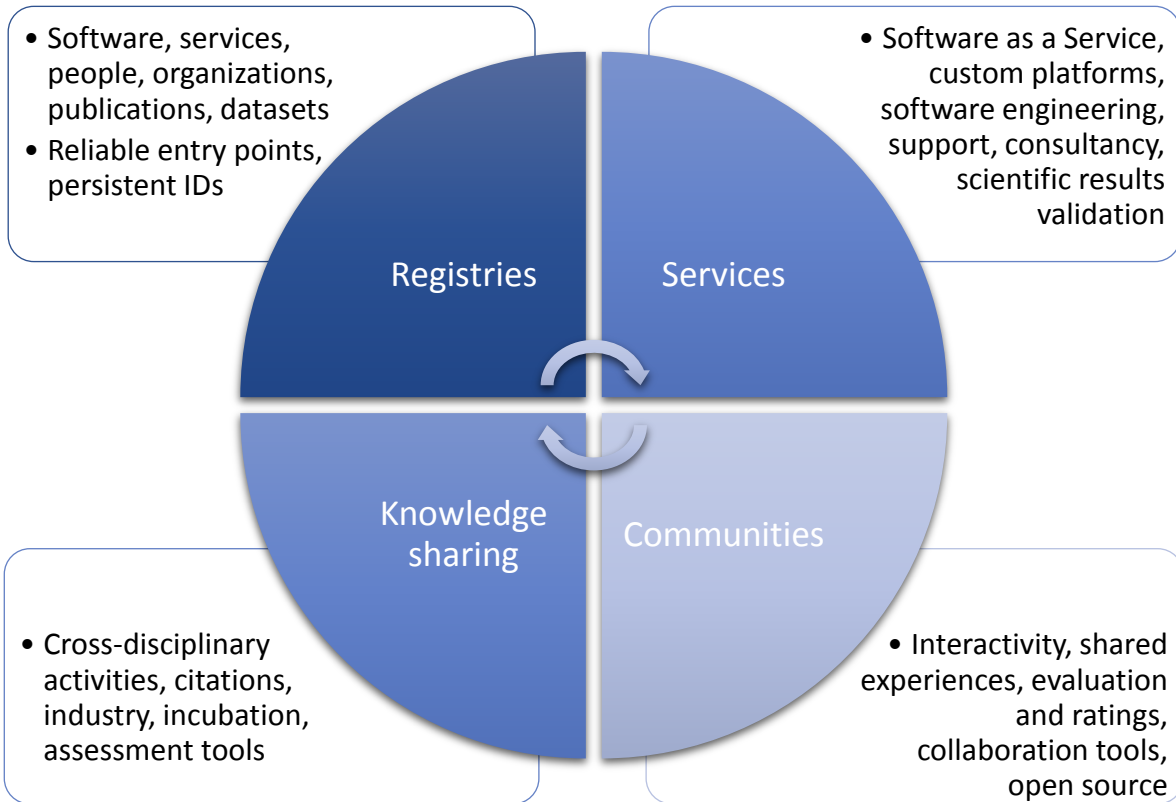

- Collaboration of 4 mw providers (ARC, dCache, gLite, UNICORE)
- 26 partners
- 24M EUR
- 3 years (05/10 – 04/13)
- 55 products
- 2M SLOC
- Open source

Critical issues

Problem area	Challenge description	Affected stakeholder groups
Difficulty in identifying software and related activities	Limited or complex ways of finding what exists already	Researchers, software developers
	Lack of visibility and recognition of development activities	Software engineers, developers
Difficulty in evaluating software	Lack of consistent real usage information and impact assessment	Development projects, infrastructure managers, funding bodies
	Limited access to other users' experience	Researchers, infrastructure managers and operators
Difficulty in leveraging existing software through re-use	Lack of continuity in development, coordination of software	Software engineers, developers, software development projects
	Lack of continuity in support of software	Researchers, research projects
	Non-optimal communication between users and developers	Researchers and software developers, R&D projects, infrastructure managers and operators
Difficulty in justifying or proposing business case for development of new software	No way of assessing the user "market" and potential revenues	SMEs
	Limited possibilities of influencing the production of software	Researchers, infrastructure managers and operators
	Limited commercial exploitation and support for technology transfer	Funding bodies, software engineers, SMEs

SciencePAD Goals

PIDs in SciencePAD

Next steps

- Keep collecting more information and feedback from stakeholders (developers, research communities, projects, funding bodies)
- Discuss with other projects about common activities and extending/reusing/integrating methodologies and functionality
- Prepare for the more formal operational phase
 - Proper design of software registries
 - Software metadata, formats, ontologies (generic and community-specific)
 - Broader-scope prototypes and software services with interested communities
