# Update on the
WLCG Squid Monitoring Task Force

WLCG Operations Coordination Meeting
06 December 2012

Dave Dykstra
dwd@fnal.gov

Update since last report

- Met last Friday & again next Friday (I will be at CERN)
- CMS will contribute squid monitoring machines
  - Lots of work to change IP address, hopefully avoid in future by allowing all CERN & Hungary data center "WLCG" addresses 128.142.0.0/16 188.185.0.0/17
  - Considering linux-ha without virtual IP address
- May use ATP as source of configuration information
  - https://tomtools.cern.ch/confluence/display/SAM/ATP
  - Feeds from OIM & GOCDB, and experiment-specific extra data, ATLAS from AGIS and CMS from SiteDB
  - GOCDB is planning expansion which may suffice
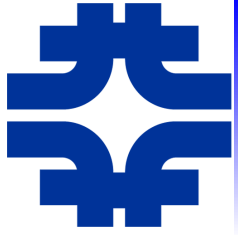

Update since last report (2)

- Planning to include CVMFS stratum 1 squids in squid monitoring
  - MRTG & awstats/failover detection
  - This will be for both the CERN and OSG CVMFS services
