

W/Z production at the LHC: state of the art of radiative corrections

Guido Montagna

Dipartimento di Fisica, Università di Pavia & INFN, Sezione di Pavia
guido.montagna@pv.infn.it

SM@LHC 2013, Freiburg, 9 – 12 April, 2013

Mainly based on work in coll. with L. Barzè, C.M. Carloni Calame, P. Nason,
O. Nicrosini, F. Piccinini, A. Vicini

The quest for precision

Several millions / year of $pp \rightarrow W, Z \rightarrow \ell\nu_\ell, \ell^+\ell^-, l = e, \mu$ events at the LHC

$$\begin{aligned} \hookrightarrow \sigma_{W/Z} &= \sigma_{\text{LO}} + \sigma_{\alpha_s} + \sigma_{\alpha_s^2} + \text{higher orders} && \text{QCD} \\ &+ \sigma_\alpha + \text{higher orders} && \text{EW} \\ &+ \sigma_{\alpha\alpha_s} + \sigma_{\alpha^n\alpha_s^m} + \dots && \text{QCD - EW} \end{aligned}$$

1. standard candles to calibrate detectors, constrain the PDFs, tune Monte Carlo ...
2. backgrounds to new physics searches
3. handles to measure precisely electroweak parameters: $M_W, \Gamma_W, \sin^2 \theta_{\text{eff}}^\ell$

Quantum consistency of the SM after the discovery of the Higgs

M. Baak *et al.*, the Gfitter group 2012

High-precision QCD

- Total production rates and rapidity distributions at NNLO (R. Hamberg, W.L. van Neerven and T. Matsuura 1991 / W.L. van Neerven and E.B. Zijlstra 1992 / R.V. Harlander and W.B. Kilgore 2002 / C. Anastasiou *et al.* 2003, 2004)

- Fully differential cross sections at NNLO in **FEWZ** (K. Melnikov and F. Petriello 2006 / R. Gavin *et al.* 2010, 2012) and **DYNNLO** (S. Catani *et al.* 2009)
- Large logs resummation in **ResBos** (C. Balazs and C.P. Yuan 1997 / F. Landry *et al.* 2002) and in **DYqT** (G. Bozzi *et al.* 2009, 2011)
- NLO Parton Showers: **MC@NLO** (S. Frixione and B. Webber 2002) / **POWHEG** (P. Nason 2004) / **SHERPA** (S. Hoeche *et al.* 2011)

Electroweak corrections: main features

- Loop corrections \longrightarrow 1. running of the couplings 2. electroweak Sudakov logs

$\alpha_{\text{ew}} \log^n(\hat{s}/M_V^2)$, $n = 2, 1$, relevant for $\hat{s} \gg M_{V=W,Z}^2$

- Bremsstrahlung corrections \longrightarrow mass singularities $\alpha_{\text{em}} \log(\hat{s}/m_f^2)$, dominant at $\sqrt{\hat{s}} \simeq M_V$ [initial-state divergences reabsorbed into PDFs]

- Photon-induced processes

Recent work by NNPDF & CTEQ

Electroweak calculations & tools

□ Complete NLO calculations

Les Houches 2005, 2007 / TeV4LHC 2007

W production

Good agreement!

Z production

NLO_{EW} and multi-photon corrections at the pole

- ▶ NLO_{EW} dominated by FSR, that strongly depends on lepton id. criteria

$(d\sigma/dM_{T,\nu_{l1}})/(\text{pb}/\text{GeV})$

- ▶ Multiple γ at the (sub-)percent level $\rightarrow \Delta M_W^{\text{QED}^\infty} \sim 10\% \Delta M_W^{\text{QED}^\alpha}$

Electroweak Sudakov logs in the high tails

- ▶ FSR (red) insufficient w.r.t. NLO_{EW} (black) in the tails

- ▶ Two-loop Sudakov logs and (inclusive) radiation of real vector bosons partially cancel the large negative one-loop Sudakov logs

U. Baur 2007

Combining QCD and electroweak corrections

Issue fixed by the calculation of the full 2-loop $\mathcal{O}(\alpha\alpha_s)$ corrections, unavailable yet.
 Alternatives:

Additive $1 + \delta_{\text{QCD}} + \delta_{\text{EW}}$ vs.

Factorized $(1 + \delta_{\text{QCD}}) \times (1 + \delta_{\text{EW}})$

- NLO_{QCD} \oplus NLO_{EW}: **RADY** and **SANC/mcsanc** for W & Z production

S. Bondarenko and A. Sapronov 2013

- NNLO_{QCD} \oplus NLO_{EW}: recent **FEWZ** version (Y. Li and F. Petriello 2012) [Z only]

QCD ⊗ EW combination in POWHEG: the method

P. Nason 2004 / S. Frixione, P. Nason and C. Oleari 2007

POWHEG idea: **hardest radiation at NLO followed by p_T -ordered shower**

$$d\sigma = \sum_f \bar{B}^f(\Phi_n) d\Phi_n \left\{ \Delta^f(\Phi_n, p_T^{\min}) + \sum_{\alpha_r} \frac{d\Phi_{\text{rad}} \theta(k_T - p_T^{\min}) \Delta^f(\Phi_n, k_T) R(\Phi_{n+1})}{B^f(\Phi_n)} \right\}$$

□ $\bar{B}^f(\Phi_n)$: **NLO normalization**

$$\begin{aligned} \bar{B}^f(\Phi_n) &= [B(\Phi_n) + V(\Phi_n)]_f + \sum_{\alpha_r} \int d\Phi_{\text{rad}} [R(\Phi_{n+1}) - C(\Phi_{n+1})] \\ &\quad + \sum_{\alpha_{\oplus}} \int \frac{dz}{z} G_{\oplus}^{\alpha_{\oplus}}(\Phi_{n,\oplus}) + \sum_{\alpha_{\ominus}} \int \frac{dz}{z} G_{\ominus}^{\alpha_{\ominus}}(\Phi_{n,\ominus}) \end{aligned}$$

□ $\Delta^f(\Phi_n, p_T)$: **(modified) Sudakov form factor**

$$\Delta^f(\Phi_n, p_T) = \exp \left\{ - \sum_{\alpha_r} \int \frac{d\Phi_{\text{rad}} R(\Phi_{n+1}) \theta(k_T(\Phi_{n+1}) - p_T)}{B^f(\Phi_n)} \right\}.$$

□ **QCD** → **QCD ⊗ EW combination**

C. Bernaciak and D. Wackerroth 2012

L. Barzè *et al.* 2012, 2013

V = virtual + soft/coll. = $V_{\text{QCD}} + V_{\text{EW}}$

R = real radiation m.e. = $R_{\text{QCD}} + R_{\text{EW}}$

C = coll. counterterms = $C_{\text{QCD}} + C_{\text{QED}}$

$G_{\oplus/\ominus}$ = coll. remnants = $G_{\text{QCD}} + G_{\text{QED}}$

α_r = singular regions of R = $\alpha_r^{\text{QCD}} + \alpha_r^{\text{QED}}$

QCD ⊗ EW combinations in the POWHEG BOX

Two independent realizations, both available in the POWHEG BOX repository (S. Alioli *et al.* 2010) at <http://powhegbox.mib.infn.it>

1. ***W* production** – POWHEG-BOX/*W*_{ew}-BW
(C. Bernaciak and D. Wackerth 2012)
2. ***W/Z* production**
POWHEG-BOX/*W*_{ew}-BMNNP
POWHEG-BOX/*Z*_{ew}-BMNNPV
(L. Barzè *et al.* 2012, 2013)

Main differences

- L. Barzè *et al.* 2012, 2013
 - ▷ V_{EW} with hybrid regularization scheme: DR + mass scheme ($m_{q/g} = m_\gamma = 0$, $m_\ell \neq 0$). FKS subtraction for IR divergences.
 - ▷ QCD shower and multiple FSR with PHOTOS. Choice of p_T^{\min} : $\sim \Lambda_{QCD}$ for QCD/QED radiation from partons / m_ℓ for QED radiation off leptons.
- C. Bernaciak and D. Wackerth 2012
 - ▷ V_{EW} , R_{EW} from WGRAD2 library. Phase space slicing for IR divergences.
 - ▷ QCD shower but no multi- γ radiation.

Combined QCD ⊗ EW corrections with POWHEG

C. Berniacki and D. Wackerth 2012

○ W production

Navigation icons: back, forward, search, etc.

Combined QCD ⊗ EW corrections with POWHEG

L. Barzè *et al.* 2012, 2013

W production

Z production

Navigation icons: back, forward, search, etc.

Combined QCD ⊗ EW corrections with POWHEG

L. Barzè *et al.* 2012, 2013

- W/Z production off the resonance

- Z-boson p_T vs. ATLAS/CMS data (w/o tuning)

What is available

QCD

- ✓ NNLO QCD corrections to total and differential cross sections
- ✓ NLO PS generators / Calculations including resummation

EW

- ✓ NLO + multiple photon corrections + two-loop Sudakov logs

QCD \oplus / \otimes EW

- ✓ ✓ Partial $\mathcal{O}(\alpha_s\alpha)$ calculations (A. Denner *et al.* 2009, 2011 / W.B. Kilgore & C. Sturm 2011)
- ✓ ✓ Additive (N)NLO_{QCD} \oplus NLO_{EW} combinations
- ✓ ✓ Factorized NLO_{QCD} \oplus NLO_{EW} \otimes QCD/QED PS combinations

What is needed

- ⊖ Full $\mathcal{O}(\alpha_s\alpha)$ calculation(s)
- ⊖ New PDF set(s) with QED contributions \leftrightarrow Ongoing work by CTEQ & NNPDF Coll.
- ⊖ Deeper understanding of th. uncertainty due to EW (e.g. pair radiation, γ -induced processes ...) and mixed QCD-EW contributions to precision measurements

Prospects and Precision at the Large Hadron Collider at 14 TeV

Period: From 01–09–2014 to 24–10–2014 / With 5th HP2 workshop, 3–5 September

Organizers: Daniel de Florian, Sven Moch, Guido Montagna and Fulvio Piccinini

Topics:

- Particle physics in view of the next generation of LHC data
- Precision QCD and electroweak calculations
- New developments in Quantum Field Theory at higher orders and Monte Carlo generators
- Higgs physics, electroweak measurements and new physics searches
- Jet dynamics, parton distribution functions and multiple parton interactions

Independent studies of QCD \otimes EW combination

- SANC interfaced to PYTHIA8 and HERWIG++ (P. Richardson *et al.* 2012)

- NLO EW corrections and YFS QED \otimes QCD exponentiation in **HERWIRI2** (S. Yost *et al.* 2011)
- Additive/Factorized combination using MC@NLO and HORACE (G. Balossini *et al.* 2010)
- PHOTOS interfaced to MC@NLO (N.E. Adam *et al.* 2008, 2010)
- QCD resummation & NLO QED FSR in **ResBos-A** (Q.-H. Cao & C.P. Yuan 2004)

Available $\mathcal{O}(\alpha\alpha_s)$ calculations

In principle...

1. NLO_{QCD} corrections to $V + \text{visible } \gamma$ production, including leptonic V decays (J.M. Campbell, R.K. Ellis and C. Williams 2011 / D. de Florian and A. Signer 2000)
2. NLO_{EW} corrections to $V + \text{visible jet}$ production, w/o (J.H. Kühn *et al.* 2005, 2007) and with leptonic V decays (A. Denner *et al.* 2009, 2011)
3. Mixed QCD \otimes QED virtual corrections to NC DY (W.B. Kilgore and C. Sturm 2011)

→ δ_{EW}^{NLO} to $V + \text{jet}$ “identical” to V production → supports QCD \otimes EW factorization

NLO_{EW} corrections in POWHEG: validation

L. Barzè *et al.* 2012, 2013

○ W production

○ Z production

QED effects in PDFs & γ -induced processes

- QED contribution to PDF evolution via α_{em} modification of DGLAP equation (H. Spiesberger 1995 / M. Roth and S. Weinzierl 2004 / A.D. Martin *et al.* 2005)
→ NEW: work by NNPDF and CTEQ Coll.
- dynamic generation of photon PDF
 → photon induced processes
