Messaging Services @ CERN

Wednesday, April 17, 2013 3:15 PM (25 minutes)

CERN started to use messaging (as defined in MOM[1]) in 2008. Today, it is used in very different environments, from Grid monitoring to computer center management and even LHC controls.

This presentation will briefly describe messaging and will detail how messaging services are provided at CERN, focusing on lessons learned inside CERN but also through European projects (EGGE, EMI and EGI).
