## Experiences running a production Puppet infrastructure at CERN

*Wednesday 17 April 2013 16:10 (25 minutes)*

As part of the CERN Agile Infrastructure project, we have been running the puppet component as a production service. With the benefit of the experience of running at larger scale with more users, we will describe the lessons we have learnt, and how we've evolved our original design. Looking to the future, we will present how we plan to support a multi-admin environment with a distributed change management workflow.
