AFS at CERN: Growing with the users' needs

Tuesday 16 April 2013 12:05 (25 minutes)

During the past year, CERN AFS users were offered up to a 100 times more space and profited from major advances in reducing the access latencies in server overload situations. This presentation will summarise the efforts that made this evolution possible.

In addition, we will also discuss the situation around IPv6 and OpenAFS and present potential options in this area which may require a common community effort.
