Collecting use cases

Wednesday 29 May 2013 14:05 (5 minutes)

XLDB events attempt to expose how
different communities manage and analyze their
data sets, share lessons learned, pains, find
commonalities and more. Due to time constraints
the discussions at the XLDB events are only
able to scratch the surface. Additionally,
it'd be extremely useful to document all the use
cases, publicize them, expose to these not
present at our events and more. Solution? We should
be all documenting our use cases. The lightning
talk will walk you through the new use case wiki,
the http://xldb.org/use
