

Enabling Grids for E-science

SRB and SRM Interoperation

EGEE 3rd User Forum, Clermont-Ferrand Feb 2008

Jens JENSEN, STFC RAL

Derek ROSS, Roger DOWNING, Matt HODGES

www.eu-egee.org

GridPP
UK Computing for Particle Physics

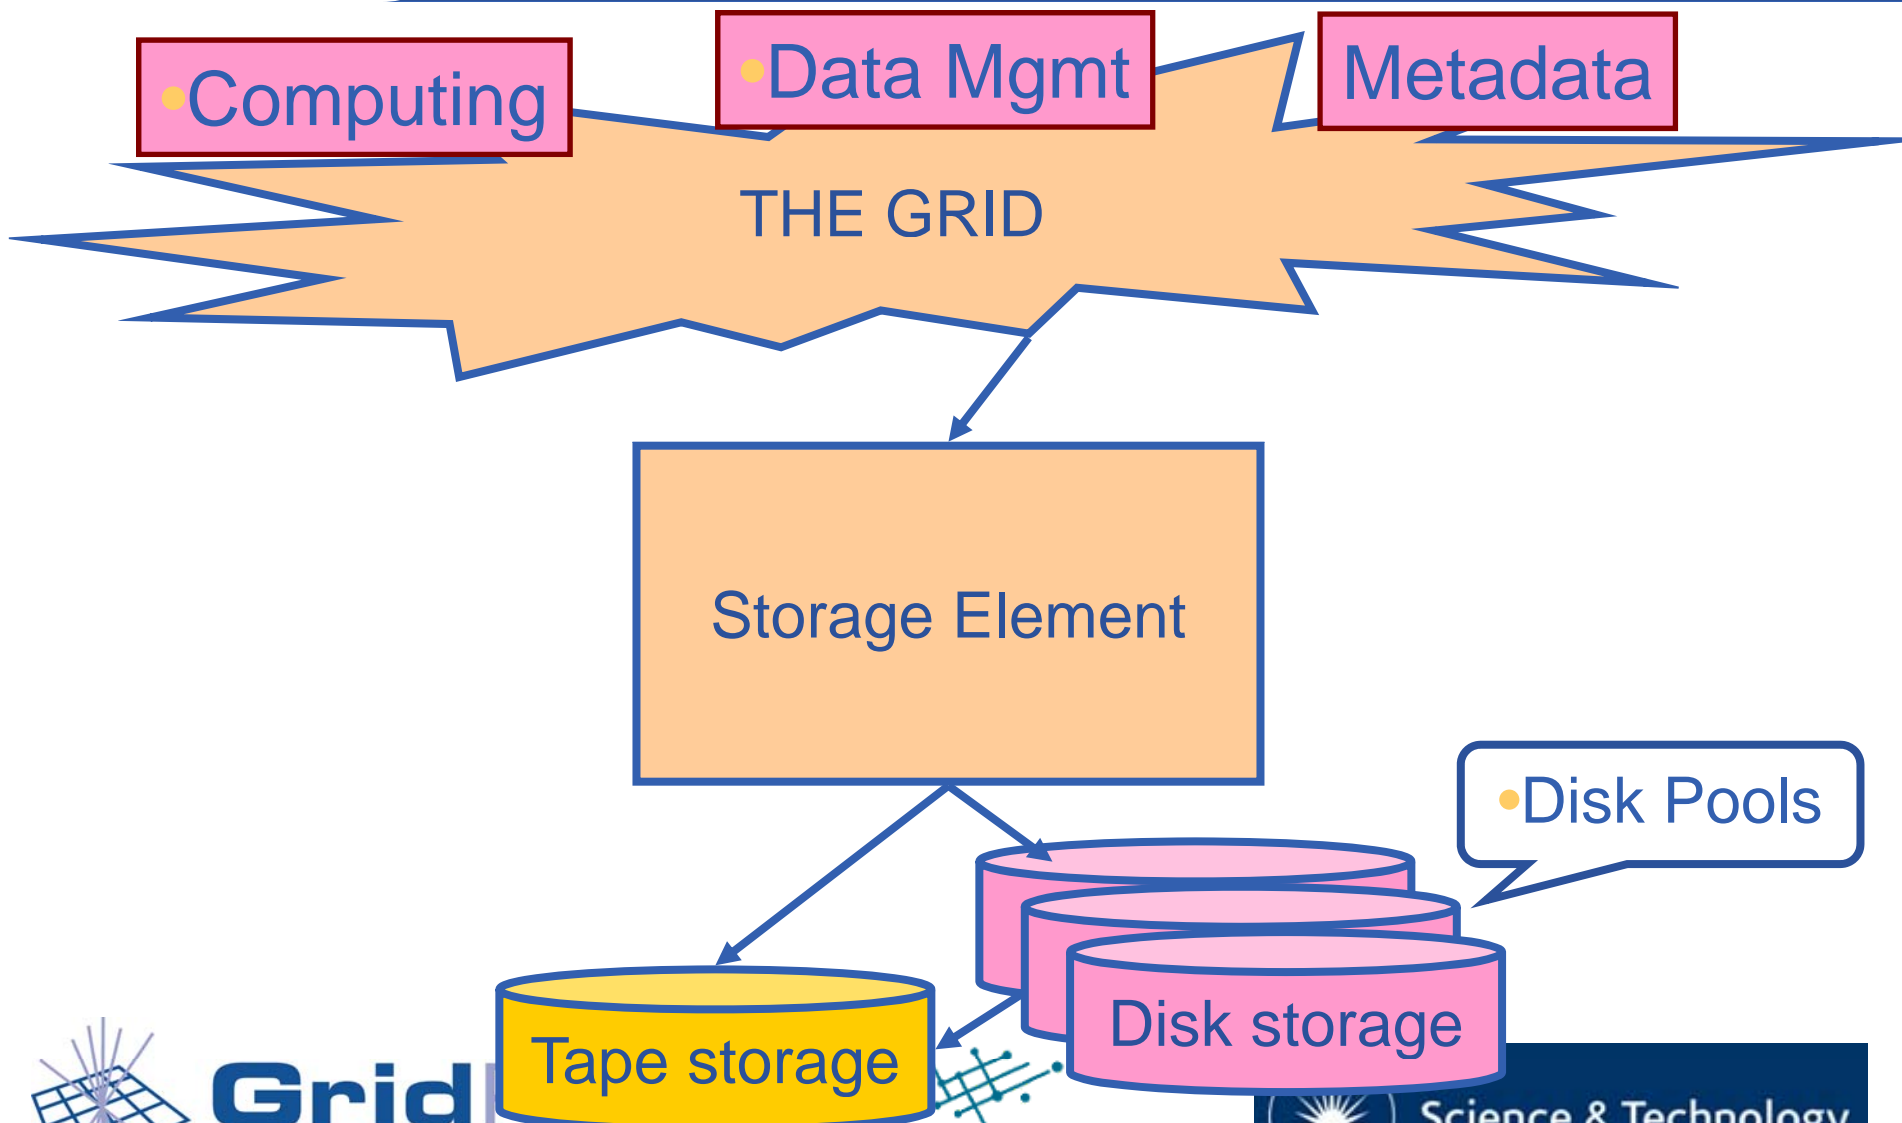

- **SRM is the “storage resource manager”**
 - A *protocol* for *controlling* storage systems
 - Metadata handled elsewhere

- **SRB is the “storage resource broker”**
 - An implementation of a “data grid” from SDSC
 - Some metadata capabilities (key/value)

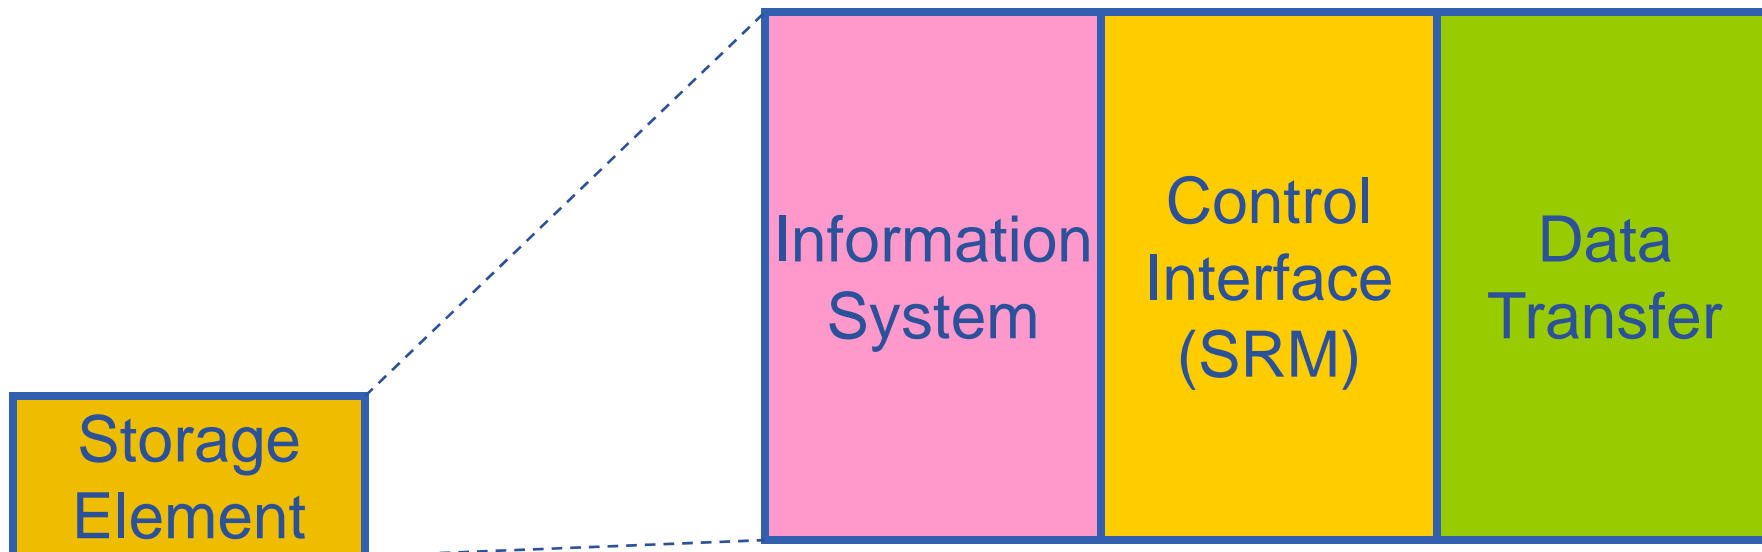

What is a “Storage Element”?

What is a Storage Element?

Used by EGEE, OSG,...

Six-seven different implementations

- **dCache (developed by DESY+FNAL)**
- **DPM (dev by CERN)**
- **CASTOR (CERN+RAL)**
- **BestMan (LBNL)**
- **Jasmine (JLAB)**
- **StoRM (INFN)**

– Some Open Source

GridPP
UK Computing for Particle Physics

OpenGridForum
OPEN FORUM | OPEN STANDARDS

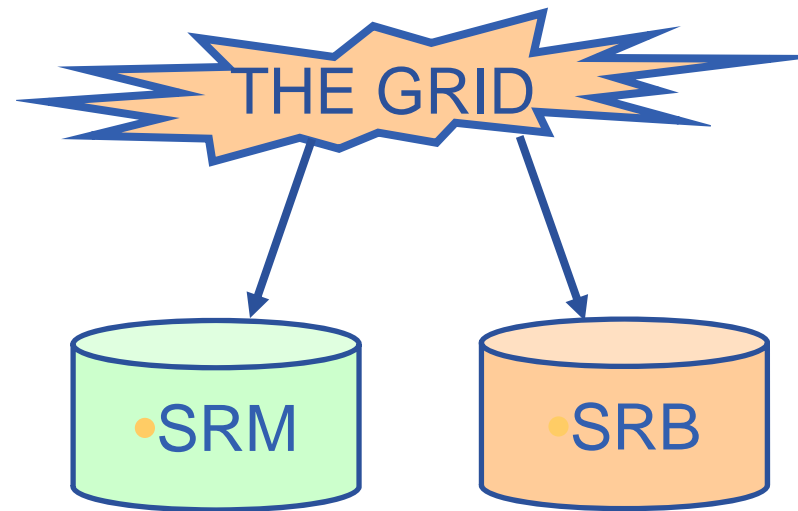

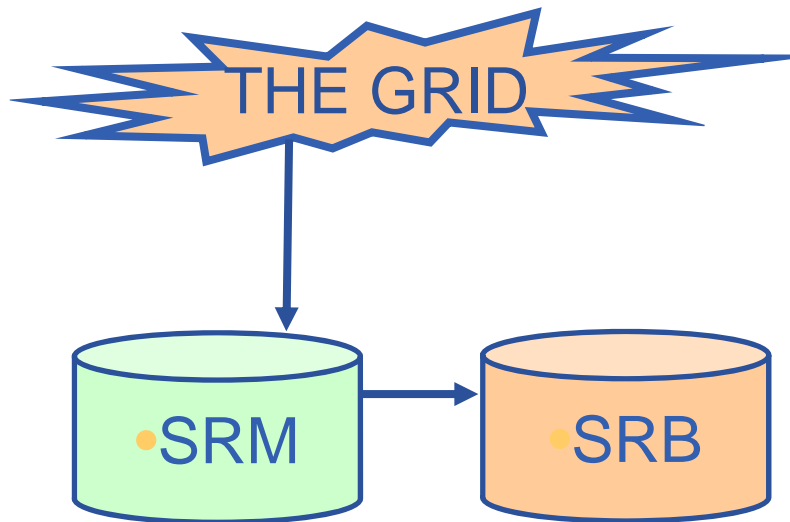

**Science & Technology
Facilities Council**

- **Storage resource broker from SDSC**
- **An implementation of a “data grid”**
- **Used by TeraGrid, UK Nat’l Grid Service**
 - Traditionally non-HEP users
- **Also interfaces to mass storage systems**

What is interoperation?

- Ability to *transfer* data between SRM and SRB
- Access data from Grid
- Make SRB appear as SE

GridPP
UK Computing for Particle Physics

- **Demonstrate interoperation**
- **Using gLite**
- **No development!**
 - For the development version
 - See Fu-Ming Tsai's talk later in this session
- **Grid Interoperability Now**

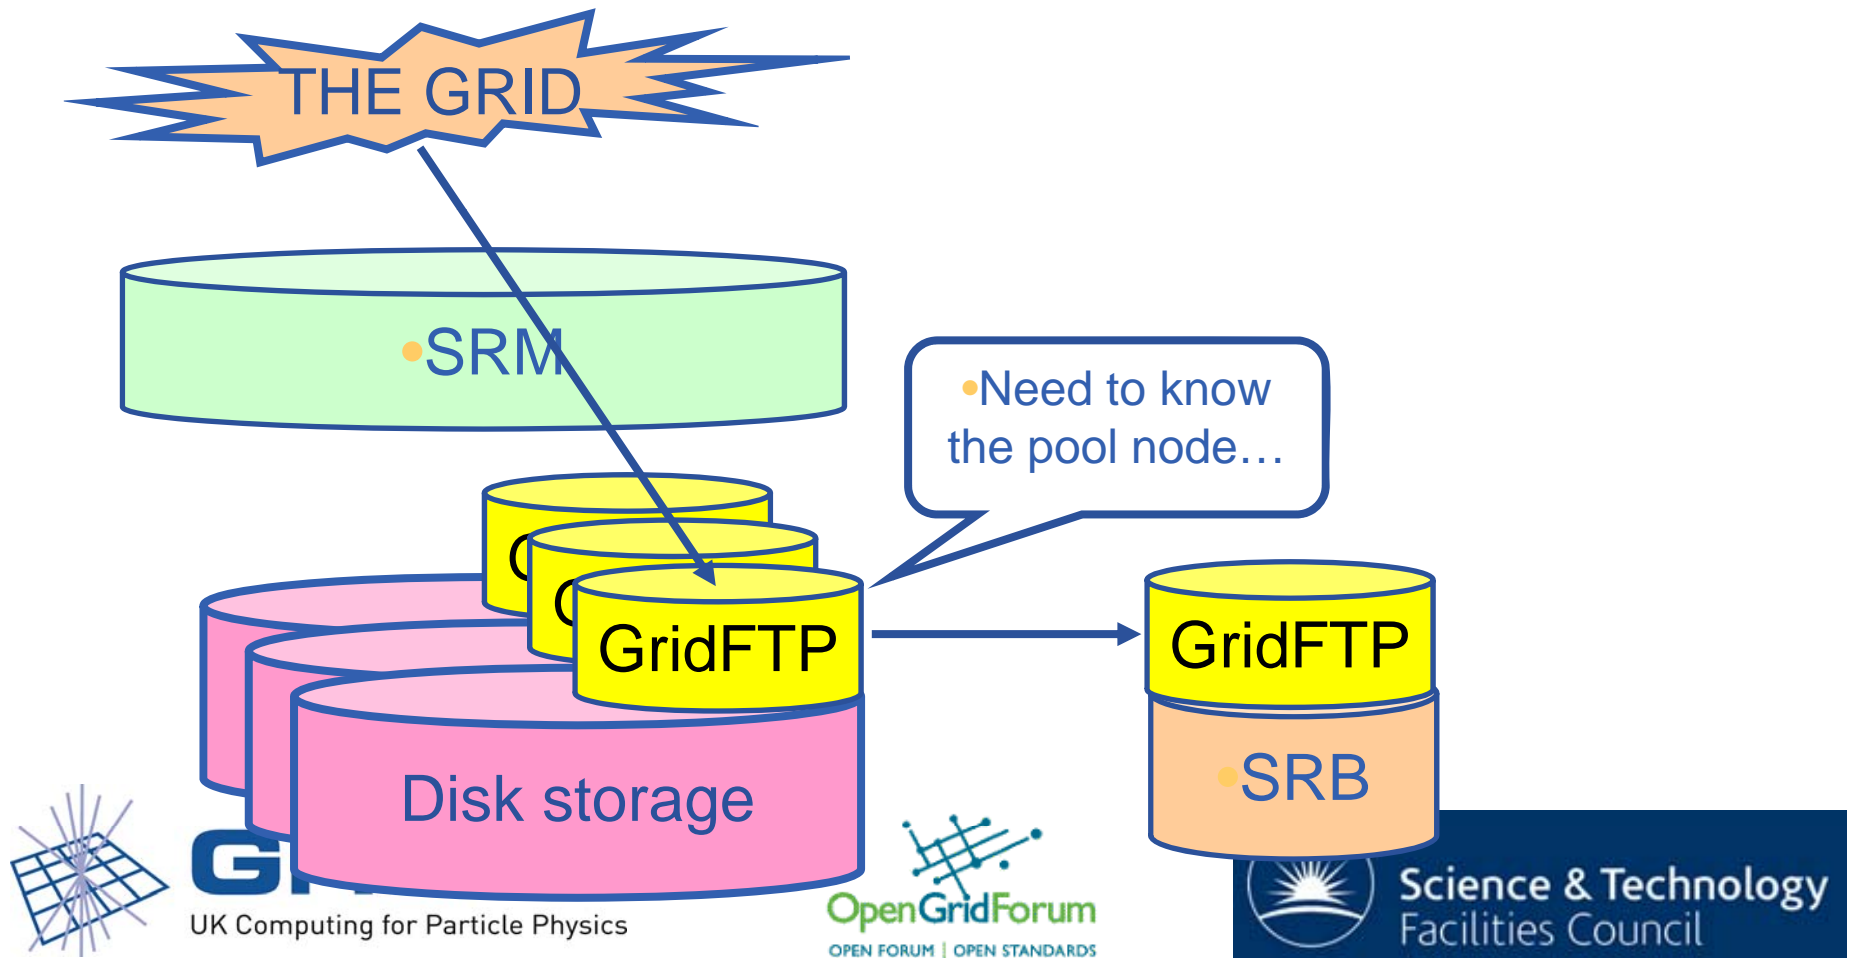

– OGF GIN-DATA

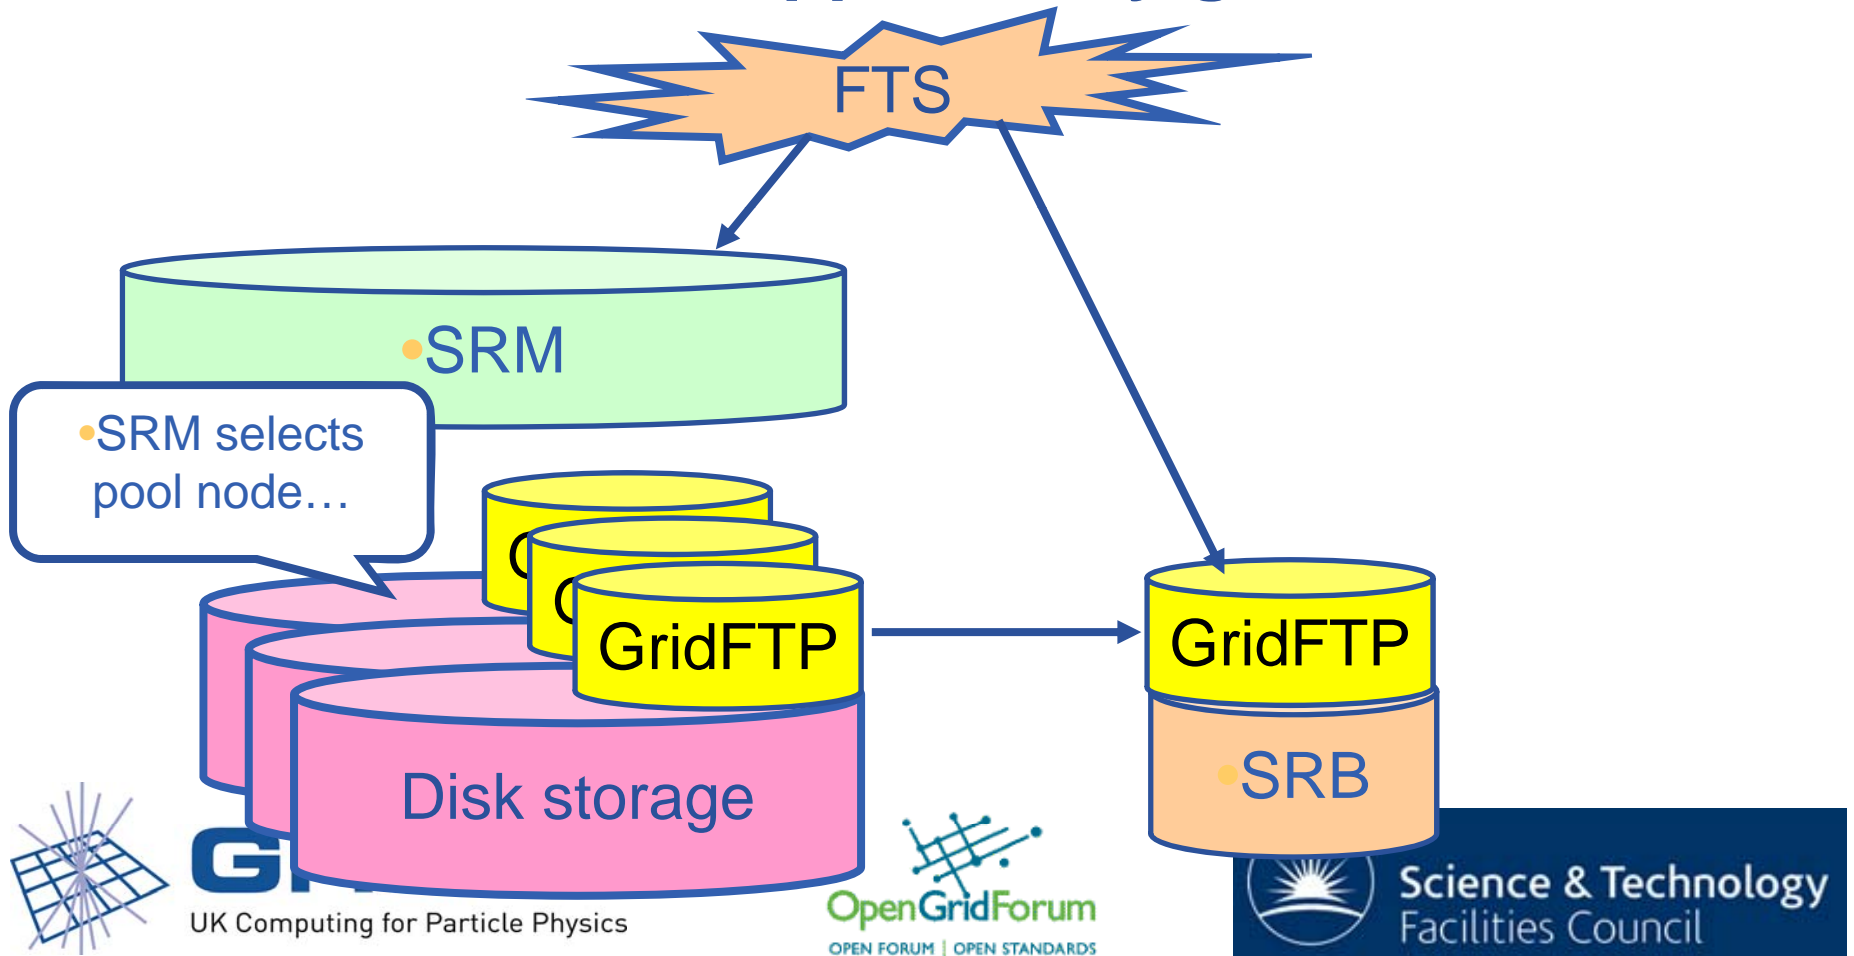

GridPP
UK Computing for Particle Physics

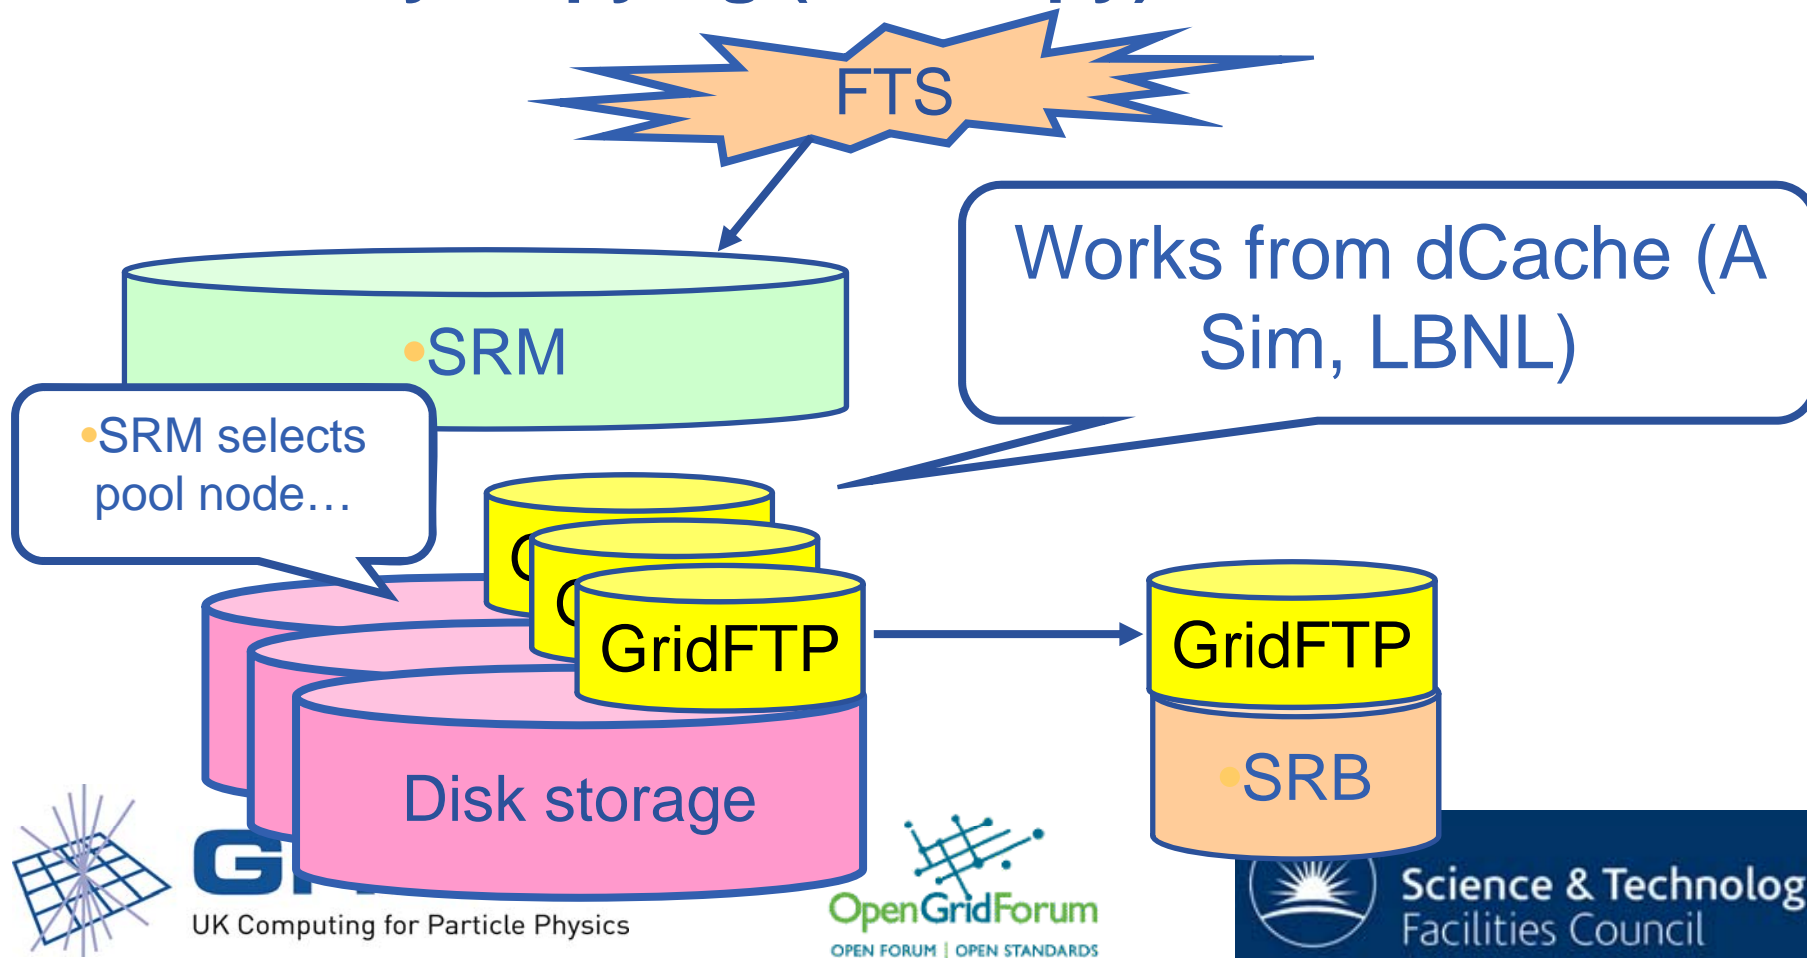

- Use GridFTP interface to SRB (ANL)

- Pretend SRB is a “Classic SE”
- Classic SE still supported by gLite FTS

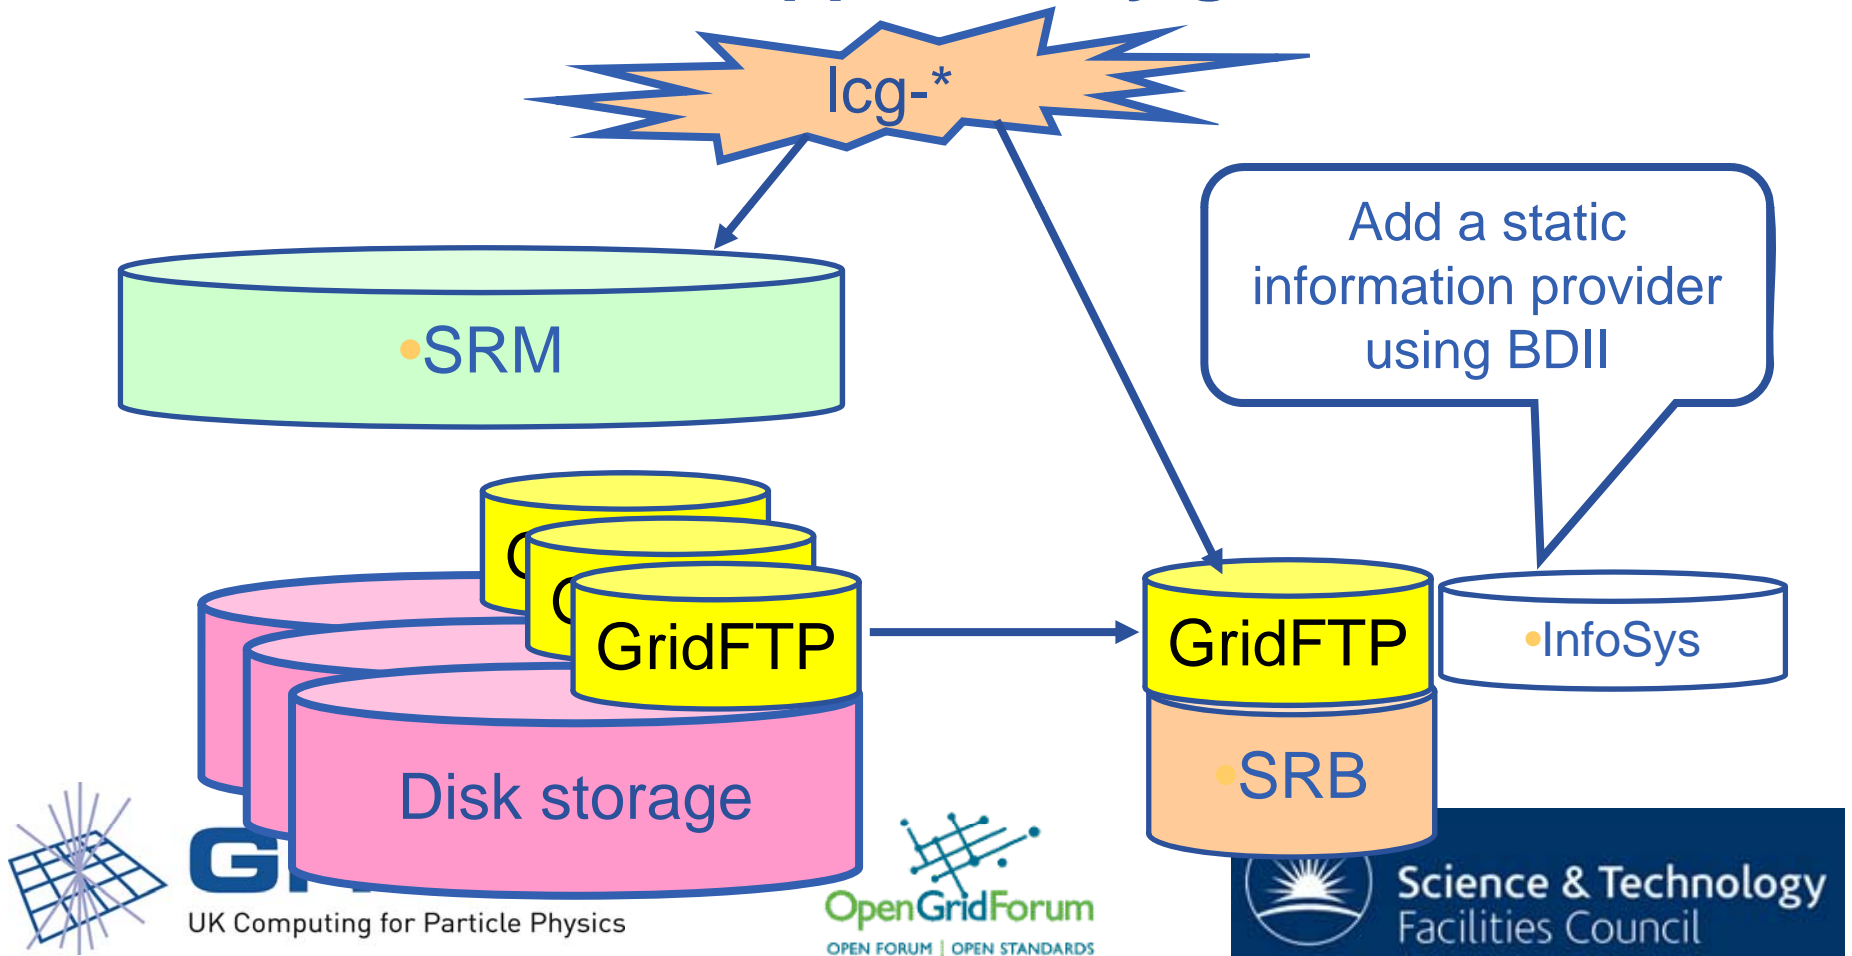

- Pretend SRB is a “Classic SE”
- 3rd Party Copying (srmCopy) to GridFTP

- **FTS does not depend on the information system**
- **lcg-utils do depend on the infosys**
 - Or *did*, when this work was done
- **GFAL depends on infosys**
 - How to get GFAL/lcg-utils supported?

- Pretend SRB is a “Classic SE”
- Classic SE still supported by gLite FTS

- **SRB appears to gLite as a Classic SE**
- **Data transfer and access from gLite**
- **No development required**
- **Works as long as Classic SEs are supported**
- **Works today! GIN! GIN! GIN!**
- **Did I mention no development required?**
