

Short review of $pp \rightarrow ppX$ processes - prospects for LHC

Antoni Szczurek

Institute of Nuclear Physics (PAN), Cracow, Poland
Rzeszów University, Rzeszów, Poland

Results and prospects of forward physics at the LHC

CERN, Switzerland, February 11-13, 2013

Contents

- Introduction
- $pp \rightarrow ppV$
- $pp \rightarrow pp\gamma\gamma$
- $pp \rightarrow pp\gamma$
- $pp \rightarrow pp\pi^0$
- $pp \rightarrow pp\pi^+\pi^-$
- Conclusions

Introduction

- Most of the high energy processes concentrated on single particle distributions (in transverse momentum or (pseudo)rapidity)
- Exclusive a few body final states studied very rarely
- QCD type processes -- KMR mechanism
 - $pp \rightarrow ppH$ (Higgs boson properties)
 - $pp \rightarrow pp\chi_c$
 - $pp \rightarrow ppb\bar{b}$ (Higgs background)
 - $pp \rightarrow pp\gamma\gamma$
 - $pp \rightarrow ppMM$ (large invariant masses of mesons)
- QED processes
 - $pp \rightarrow pp\mu^+\mu^-$ (e.m. form factors)
 - $pp \rightarrow ppW^+W^-$ (gauge boson coupling)
 - $pp \rightarrow ppm\bar{m}$ (Dirac monopoles)

Introduction, continued

- QCD photoproduction of vector mesons

- $pp \rightarrow ppJ/\psi$ (search for odderon)
- $pp \rightarrow pp\Upsilon$
- $pp \rightarrow ppp(\omega, \phi)$
- $pp \rightarrow ppZ^0$

- Production of meson pairs

- $pp \rightarrow pp\pi^+\pi^-$ (search for glueballs)
- $pp \rightarrow ppK^+K^-$
- $pp \rightarrow nn\pi^+\pi^+$

mechanism of the reaction

diffractive excitation of resonances

glueballs (?)

large contribution to central diffraction cross section

low energy theorems ($gg \rightarrow \pi\pi$)

Introduction, continued

- Production of single pion

- $pp \rightarrow pp\pi^0$
- $pp \rightarrow pn\pi^+$

Large cross section

Large contribution to single diffraction cross section

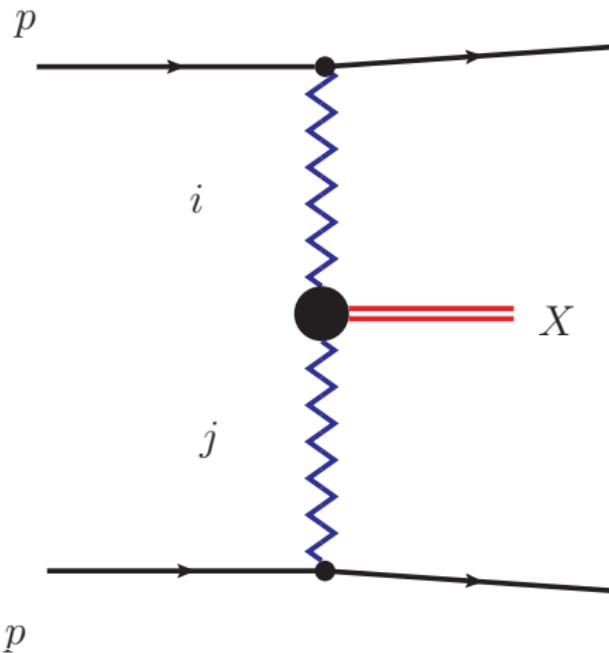

Contribution to large rapidity production (cosmic ray interactions)

- Diffractive excitation of single resonances

- $pp \rightarrow pp\gamma$

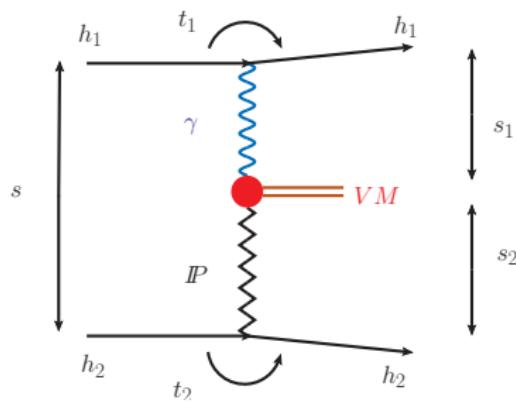

Central exclusive production

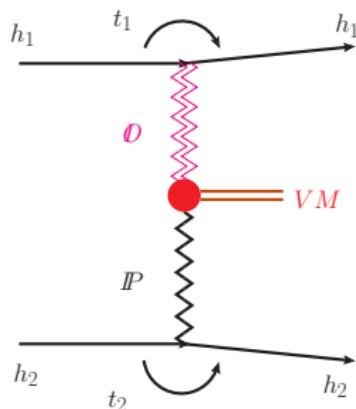

Exclusive Production of J/ψ , Υ in Hadronic Collision

Photoproduction

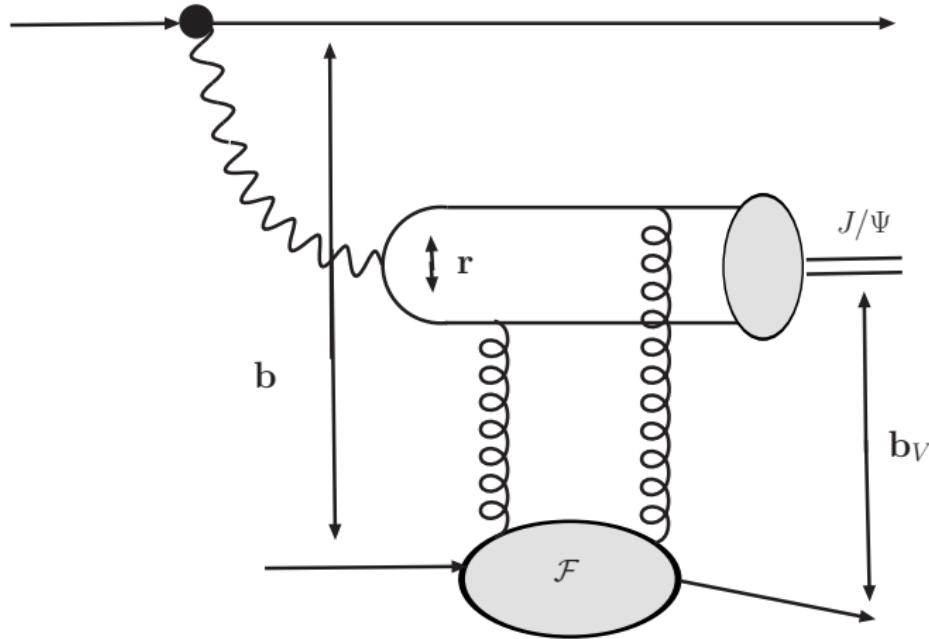

Odderon–Pomeron fusion

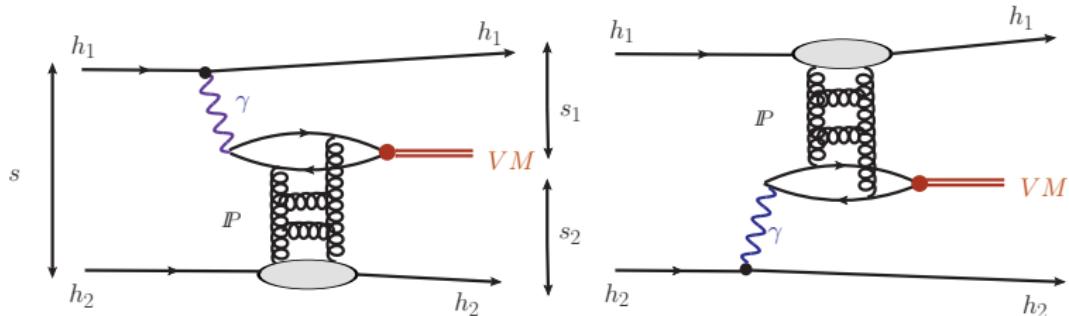

Khoze-Martin-Ryskin '02; Klein & Nystrand '04
cross section \sim nanobarns

A. Schäfer, Mankiewicz & Nachtmann '91
cross section ~ 0.1 nanobarns

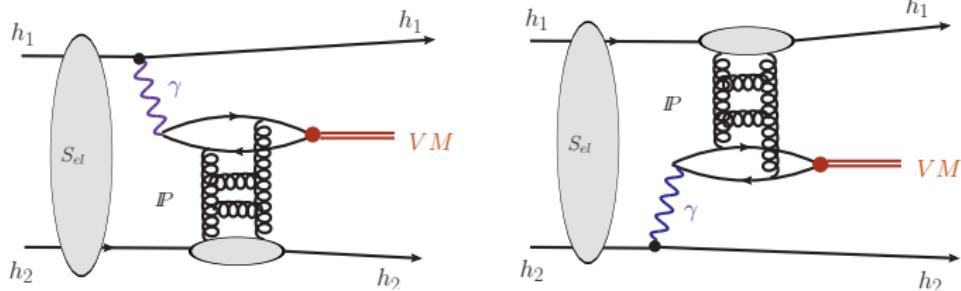

Exclusive Photoproduction in Hadronic Collisions

$$\begin{aligned}
 M(\mathbf{p}_1, \mathbf{p}_2) &= e_1 \frac{2}{z_1} \frac{\mathbf{p}_1}{t_1} \mathcal{F}_{\tilde{\jmath}'_1 \tilde{\jmath}_1}(\mathbf{p}_1, t_1) \mathcal{M}_{\gamma^* h_2 \rightarrow V h_2}(s_2, t_2, Q_1^2) \\
 &+ e_2 \frac{2}{z_2} \frac{\mathbf{p}_2}{t_2} \mathcal{F}_{\tilde{\jmath}'_2 \tilde{\jmath}_2}(\mathbf{p}_2, t_2) \mathcal{M}_{\gamma^* h_1 \rightarrow V h_1}(s_1, t_1, Q_2^2).
 \end{aligned}$$

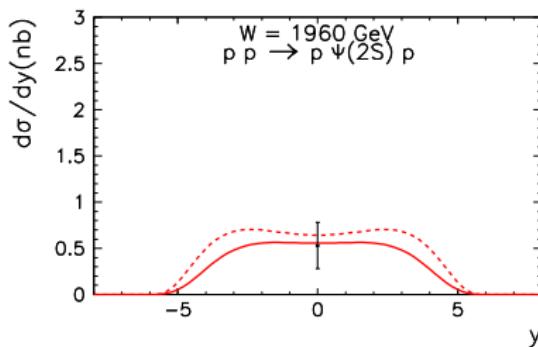

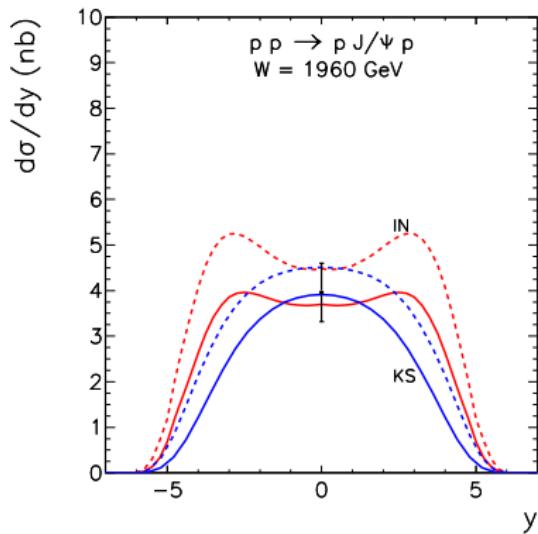

Absorption corrections

$$M(\mathbf{p}_1, \mathbf{p}_2) = \int \frac{d^2\mathbf{k}}{(2\pi)^2} S_{el}(\mathbf{k}) M^{(0)}(\mathbf{p}_1 - \mathbf{k}, \mathbf{p}_2 + \mathbf{k})$$

- Absorptive corrections depend on elastic $h_1 h_2$ amplitude
→ taken from data.
- photon pole → peripheral interactions → Absorption at 20%-level.

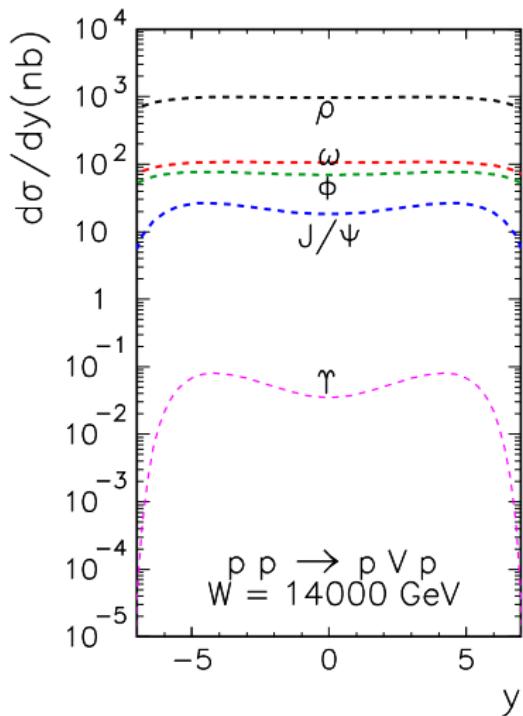

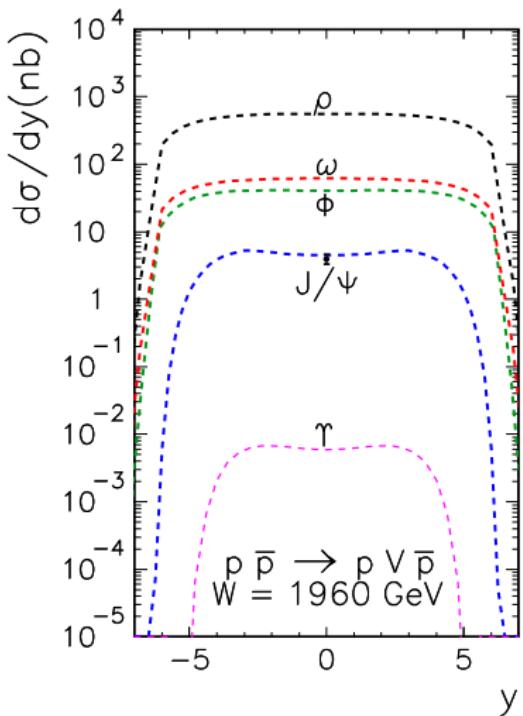

Rapidity spectra at Tevatron

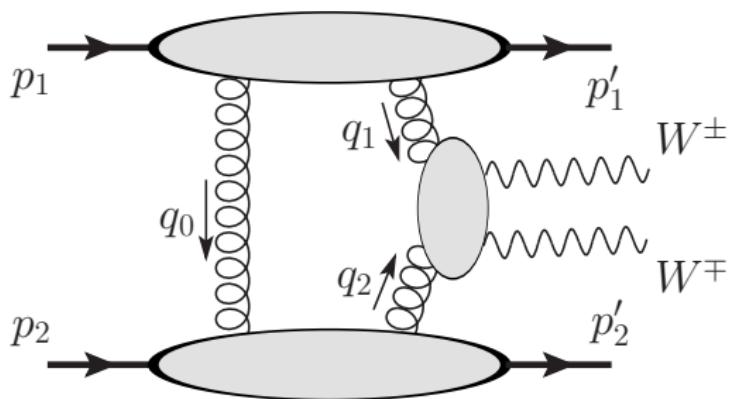

- CDF collaboration, T. Aaltonen et al. Phys. Rev. Lett. 102 (2009)
- W. Schäfer & A. Szczurek Phys. Rev. D76 (2007).
- calculations by A. Cisek, PhD thesis (2012),

Rapidity spectra at Tevatron/LHC energies

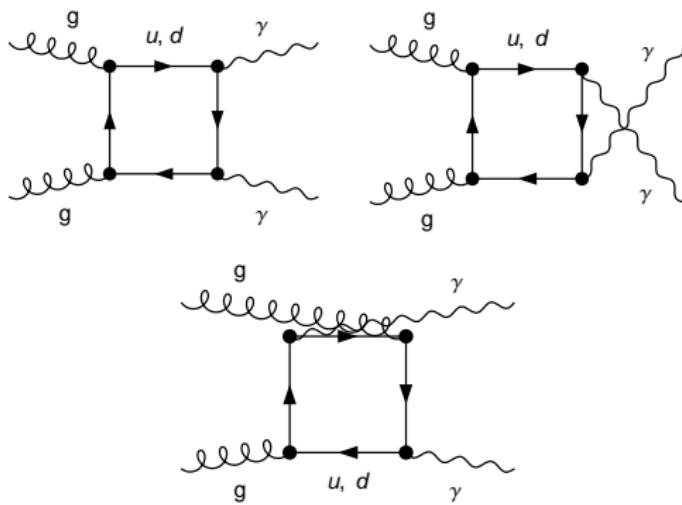

$pp \rightarrow pp\gamma\gamma$

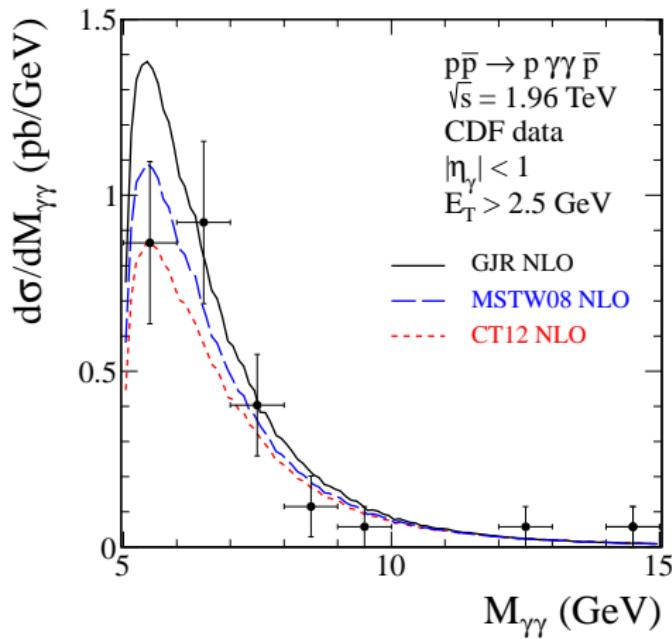

Lebiedowicz, Pasechnik, Szczurek

Nucl. Phys. **B867** (2013) 61.

$pp \rightarrow pp\gamma\gamma$

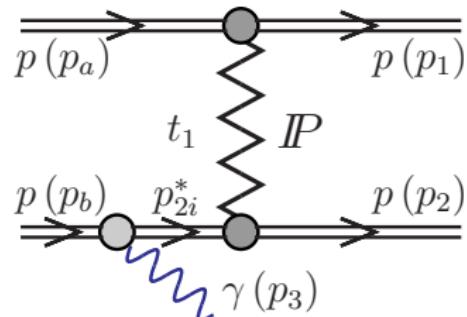

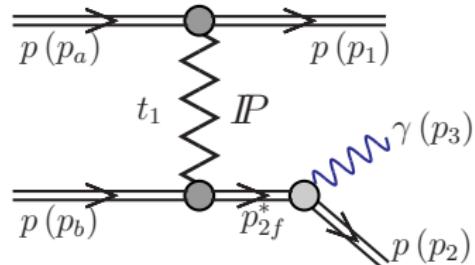

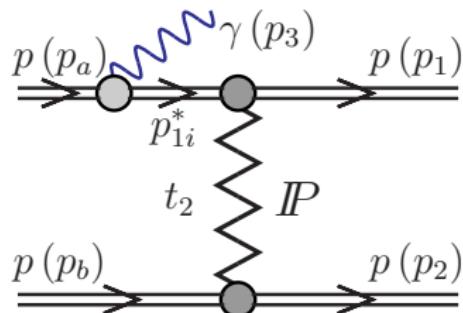

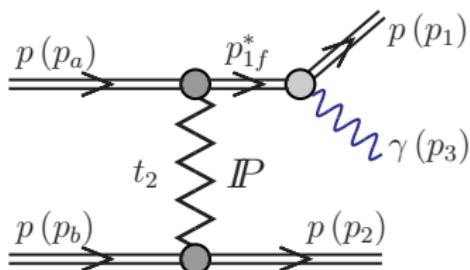

$pp \rightarrow pp\gamma\gamma$

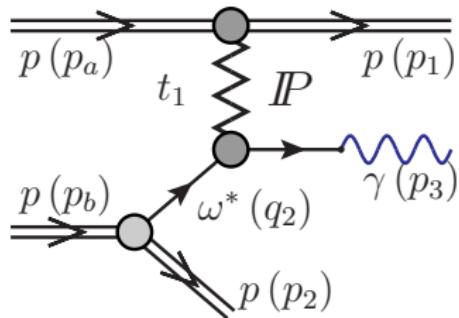

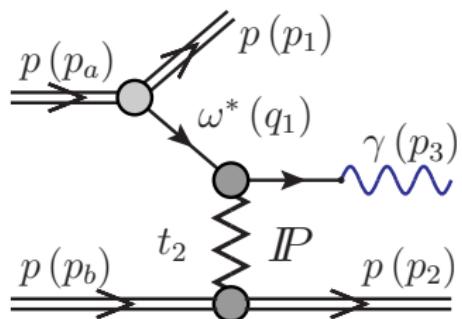

Lebiedowicz, Pasechnik, Szczurek

Nucl. Phys. **B867** (2013) 61.

Classical bremsstrahlung

Vector meson rescattering (new)

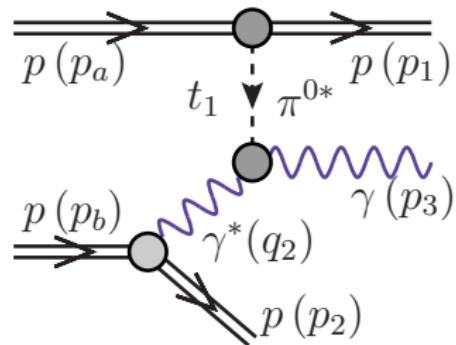

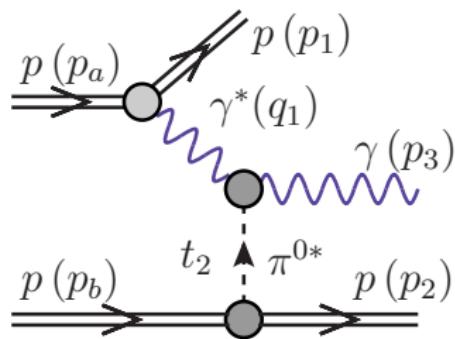

Vector meson is off-mass shell.

Similar diagrams for ρ^0 meson.

The diagrams for ω and ρ^0 interfere.

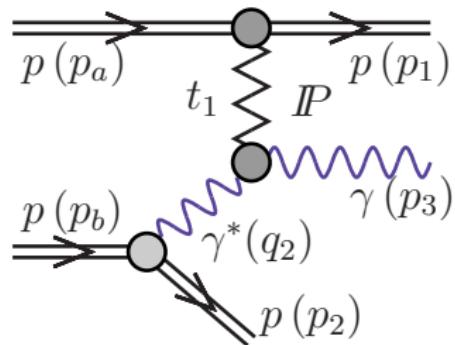

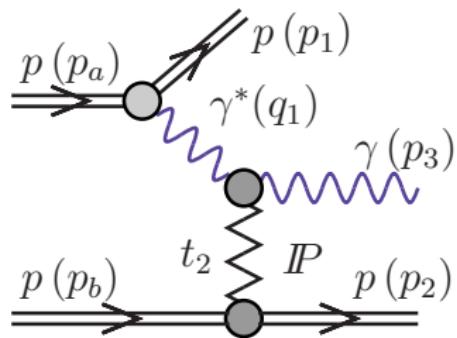

Pion cloud contribution (new)

Anomalous coupling, but off-shell pion

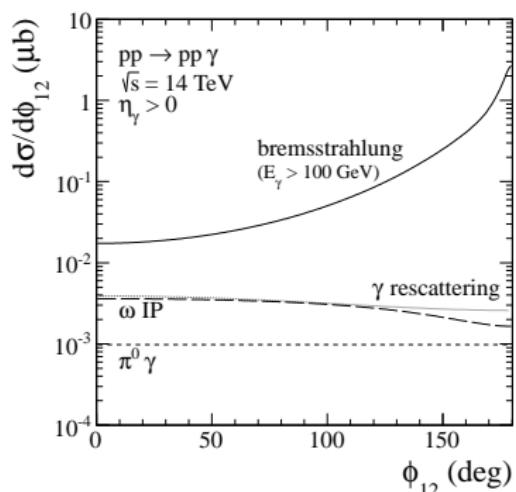

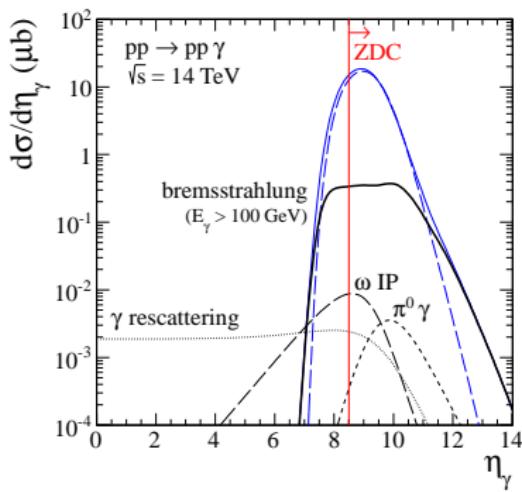

Photon rescattering (new)

photon-proton quasi-elastic scattering

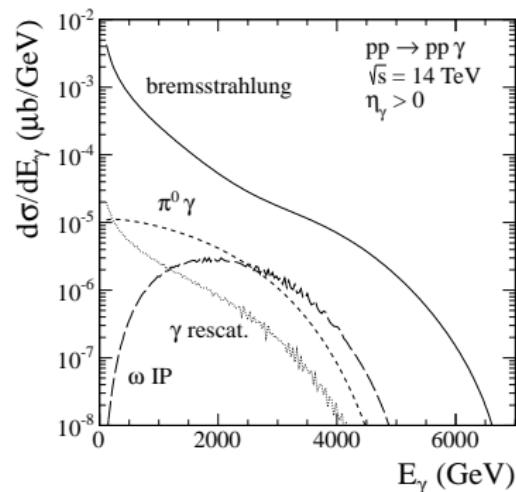

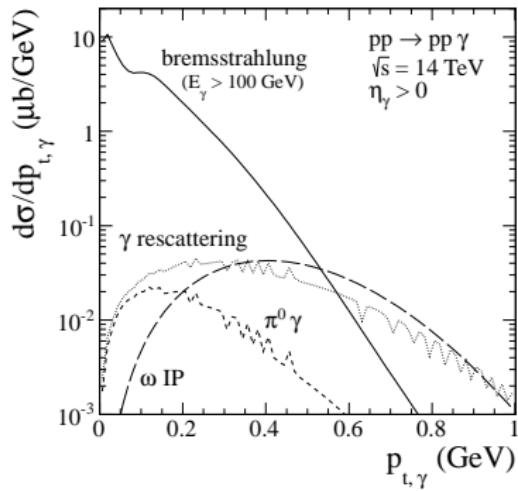

Differential distributions, page 1

Most of the mechanisms at large (pseudo)rapidities
Only photon elastic rescattering at midrapidities

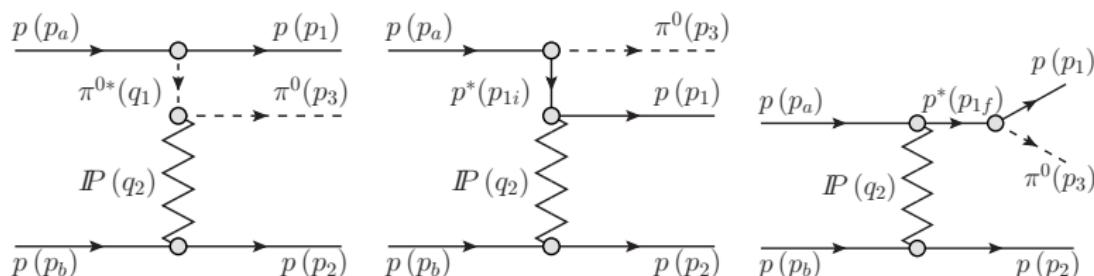

Differential distributions, page 2

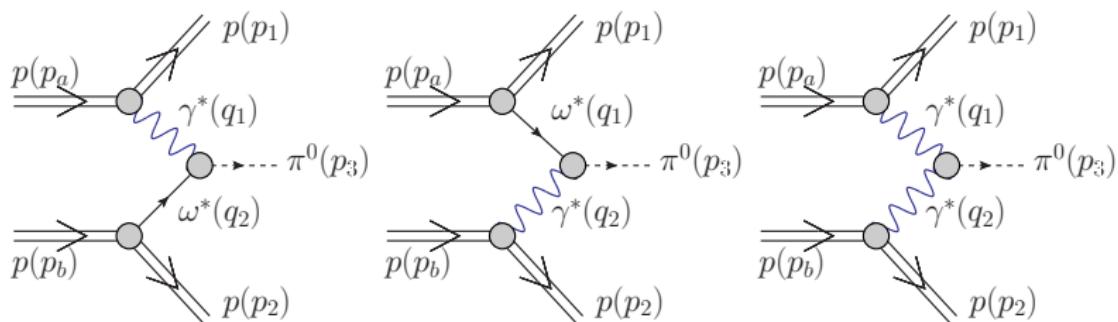

Large energy photons, ZDC

$pp \rightarrow pp\pi^0$, mechanisms

$pp \rightarrow pn\pi^+$ studied at low energies
3 diagrams: Drell-Hiida-Deck model

$pp \rightarrow pp\pi^0$, new mechanisms

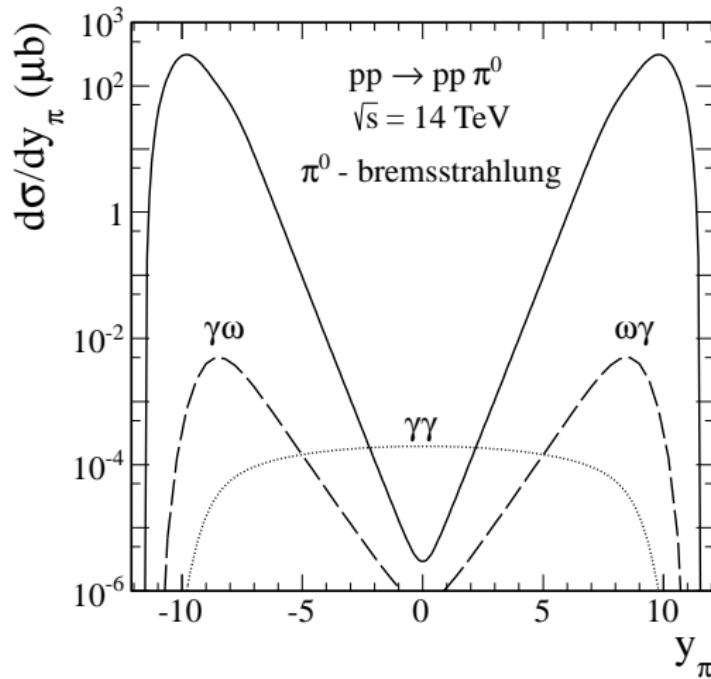

strong coupling of omega to nucleon

$\gamma^*\gamma^*\pi^0$ anomalous coupling

The strength fixed from $\pi^0 \rightarrow \gamma\gamma$.

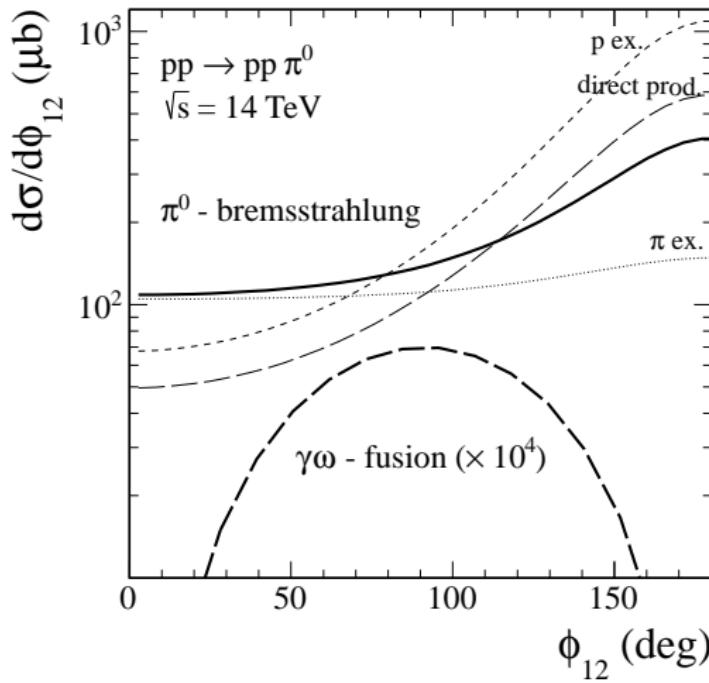

$pp \rightarrow pp\pi^0$, contributions

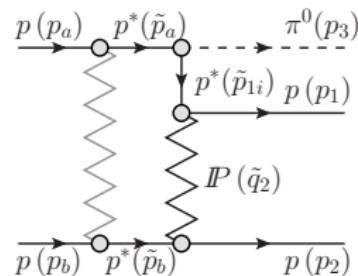

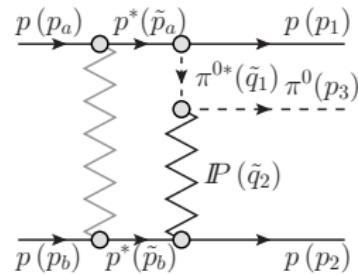

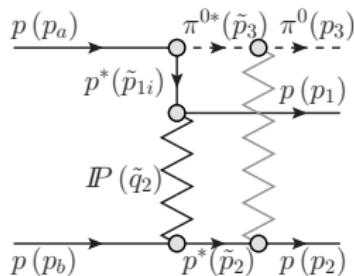

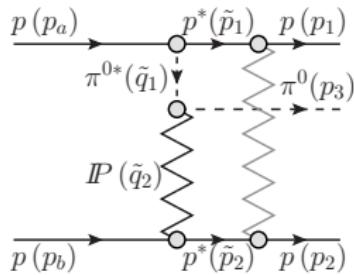

Large contribution to low-mass single diffraction

$pp \rightarrow pp\pi^0$, contributions

Convenient way to fix relative contribution of different diagrams

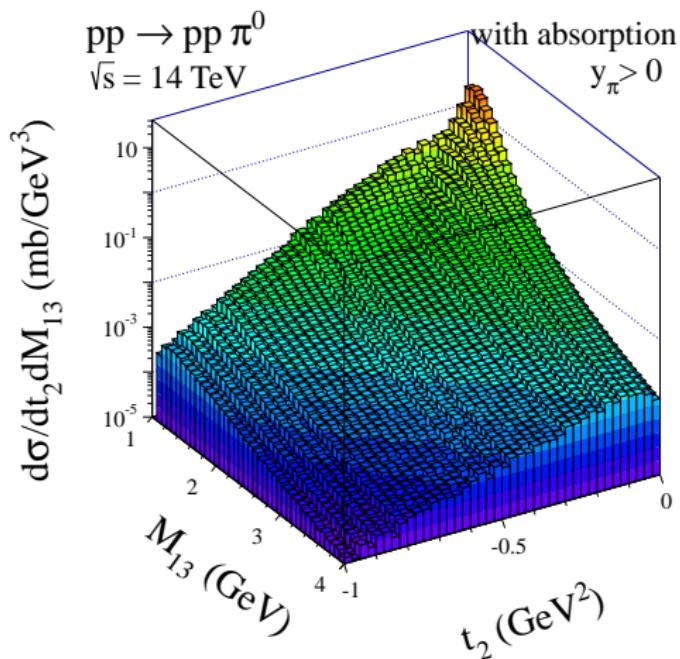

$pp \rightarrow pp\pi^0$, absorption effects

calculation in progress

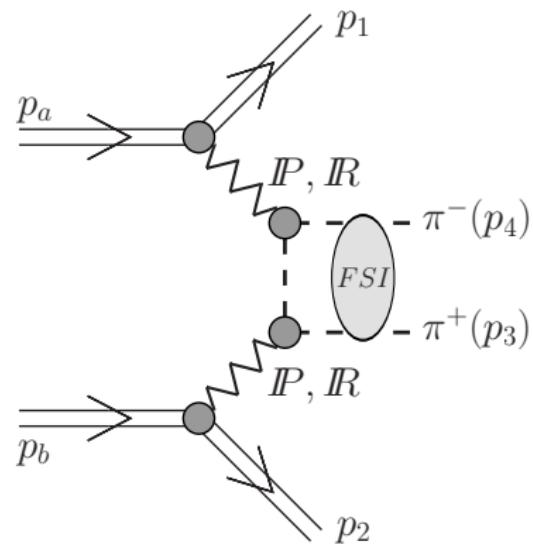

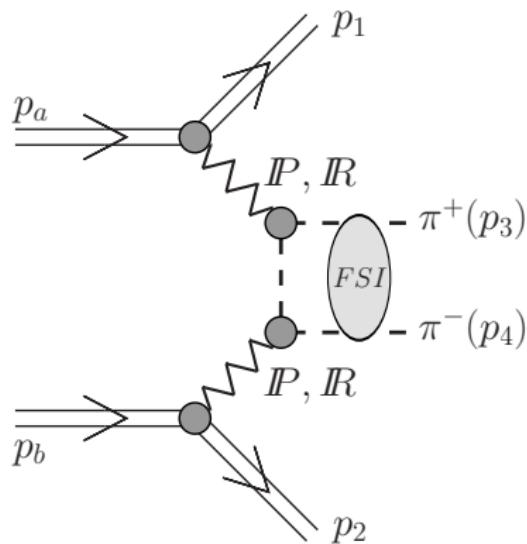

$pp \rightarrow pp\pi^0$, first results with absorption

mass-dependent slope

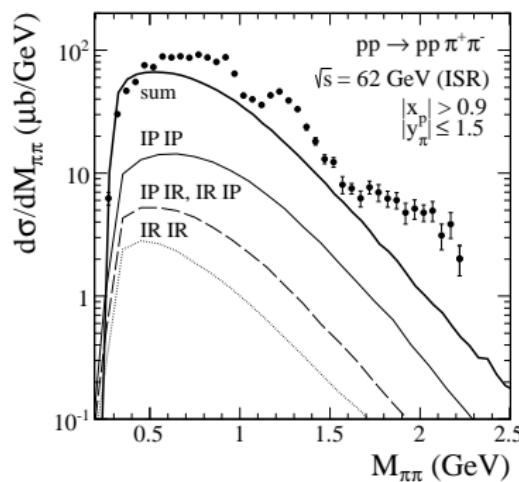

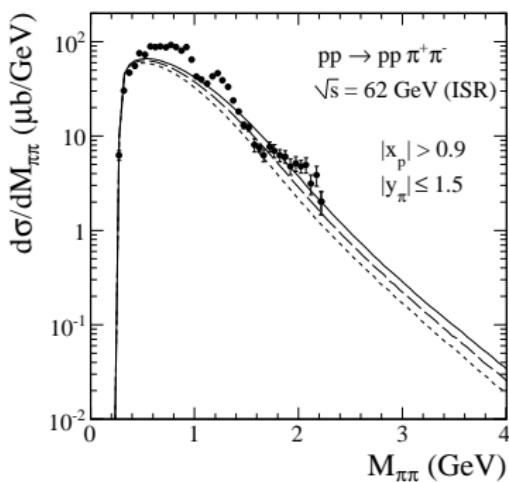

$$pp \rightarrow pp\pi^+\pi^-$$

Double-pomeron exchanges searched for in 1970's

$pp \rightarrow \pi^+ \pi^-$ at ISR

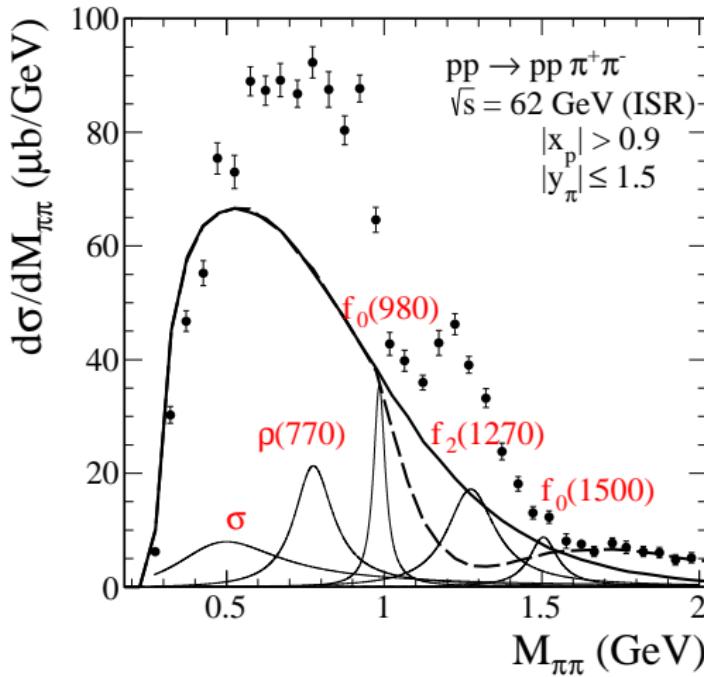

Large contribution of non-DPE even at $\sqrt{s} = 62 \text{ GeV}$.

P. Lebiedowicz and A. Szczurek, Phys. Rev. D81 (2010) 036003.

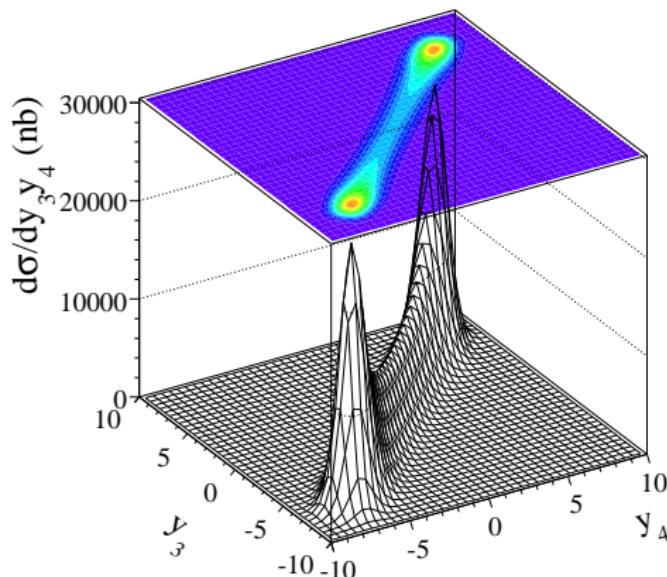

Resonance contributions

Waiting for consistent inclusion of continuum and resonances

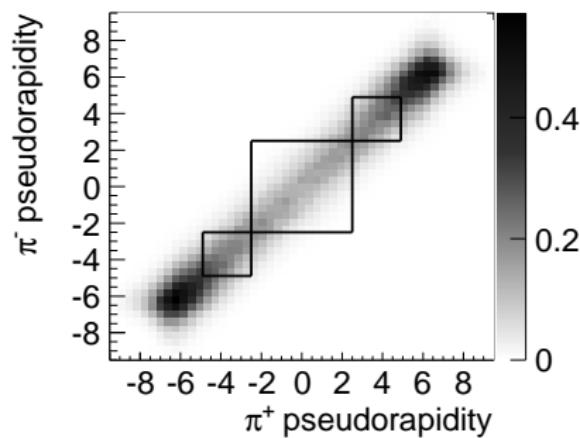

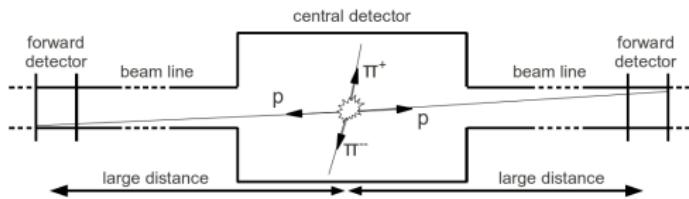

$\gamma(\pi^+) \times \gamma(\pi^-)$ correlations

We predict funny camel-like shape

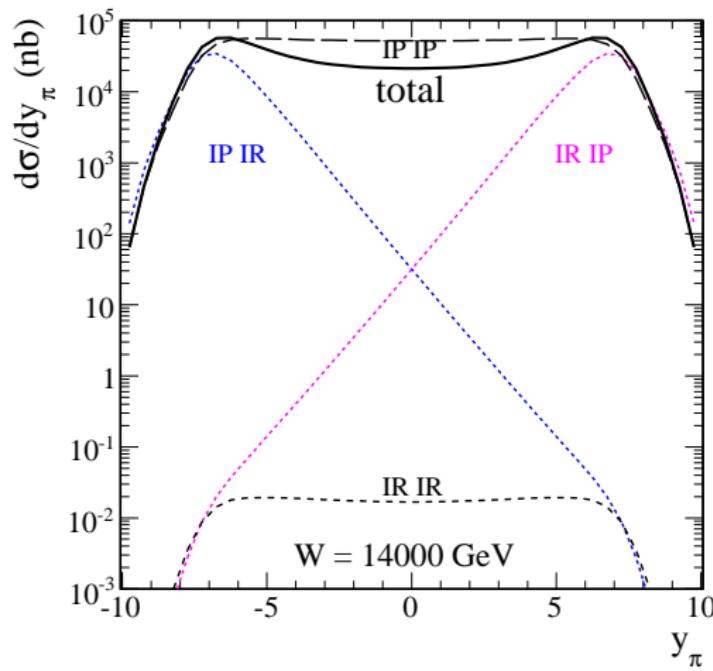

A measurement with ALFA@ATLAS

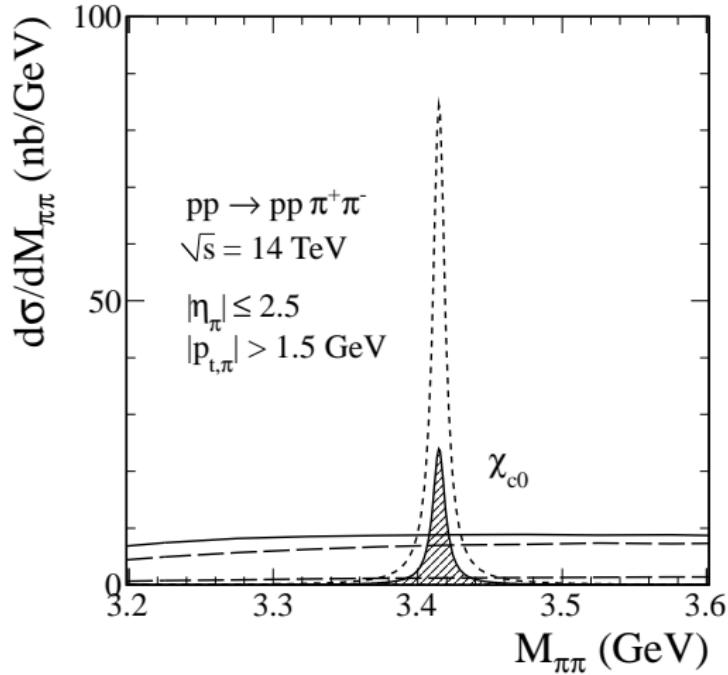

R. Staszewski, P. Lebiedowicz, M. Trzebiński, J. Chwastowski and A. Szczurek, Acta Phys. Polon. **B42** (2011) 181.

Reggeons at high energies

Reggeon exchanges still important, even at LHC

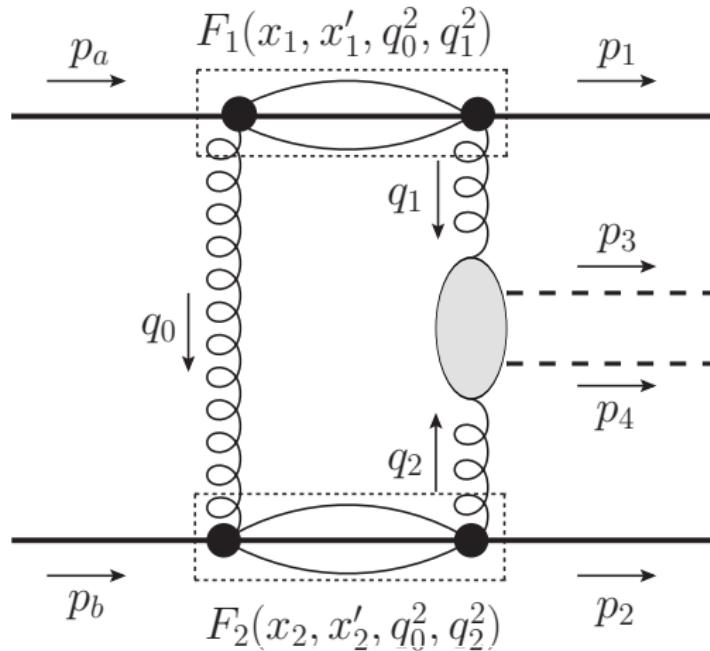

$\chi_c(0) \rightarrow \pi^+ \pi^-$

Difficult in $\chi_c(J^+) \rightarrow J/\Psi \gamma$ channel

$gg \rightarrow \pi\pi$ nonperturbative coupling

competitive mechanism:

UGDF in nonperturbative region

Conclusions

- Extremely large span of rapidities at the LHC
- Different processes could be measured in unexplored region of energies.
- Testing photoproduction at much larger energies than at HERA.
- Searches for odderon possible in exclusive vector meson production.
- Searches for glueballs possible in exclusive production of $\pi^+\pi^-$ or K^+K^- pairs.
- Many exclusive channels contribute to single diffraction ($pp \rightarrow pp\pi^0$) or central diffraction ($pp \rightarrow pp\pi\pi$) cross section.
- Many interesting nonperturbative effects:
 - low energy phenomena at high energies.
 - testing the nature of the pomeron (e.g. its spin structure)
