

Status of ATLAS activities and plans in Japan

Katsuo Tokushuku (KEK)

December 7, 2007

CERN-KEK Committee, 2nd meeting

ATLAS Collaboration

(Status October 2007)

37 Countries

167 Institutions

2000 Scientific Authors total

(1600 with a PhD, for M&O share)

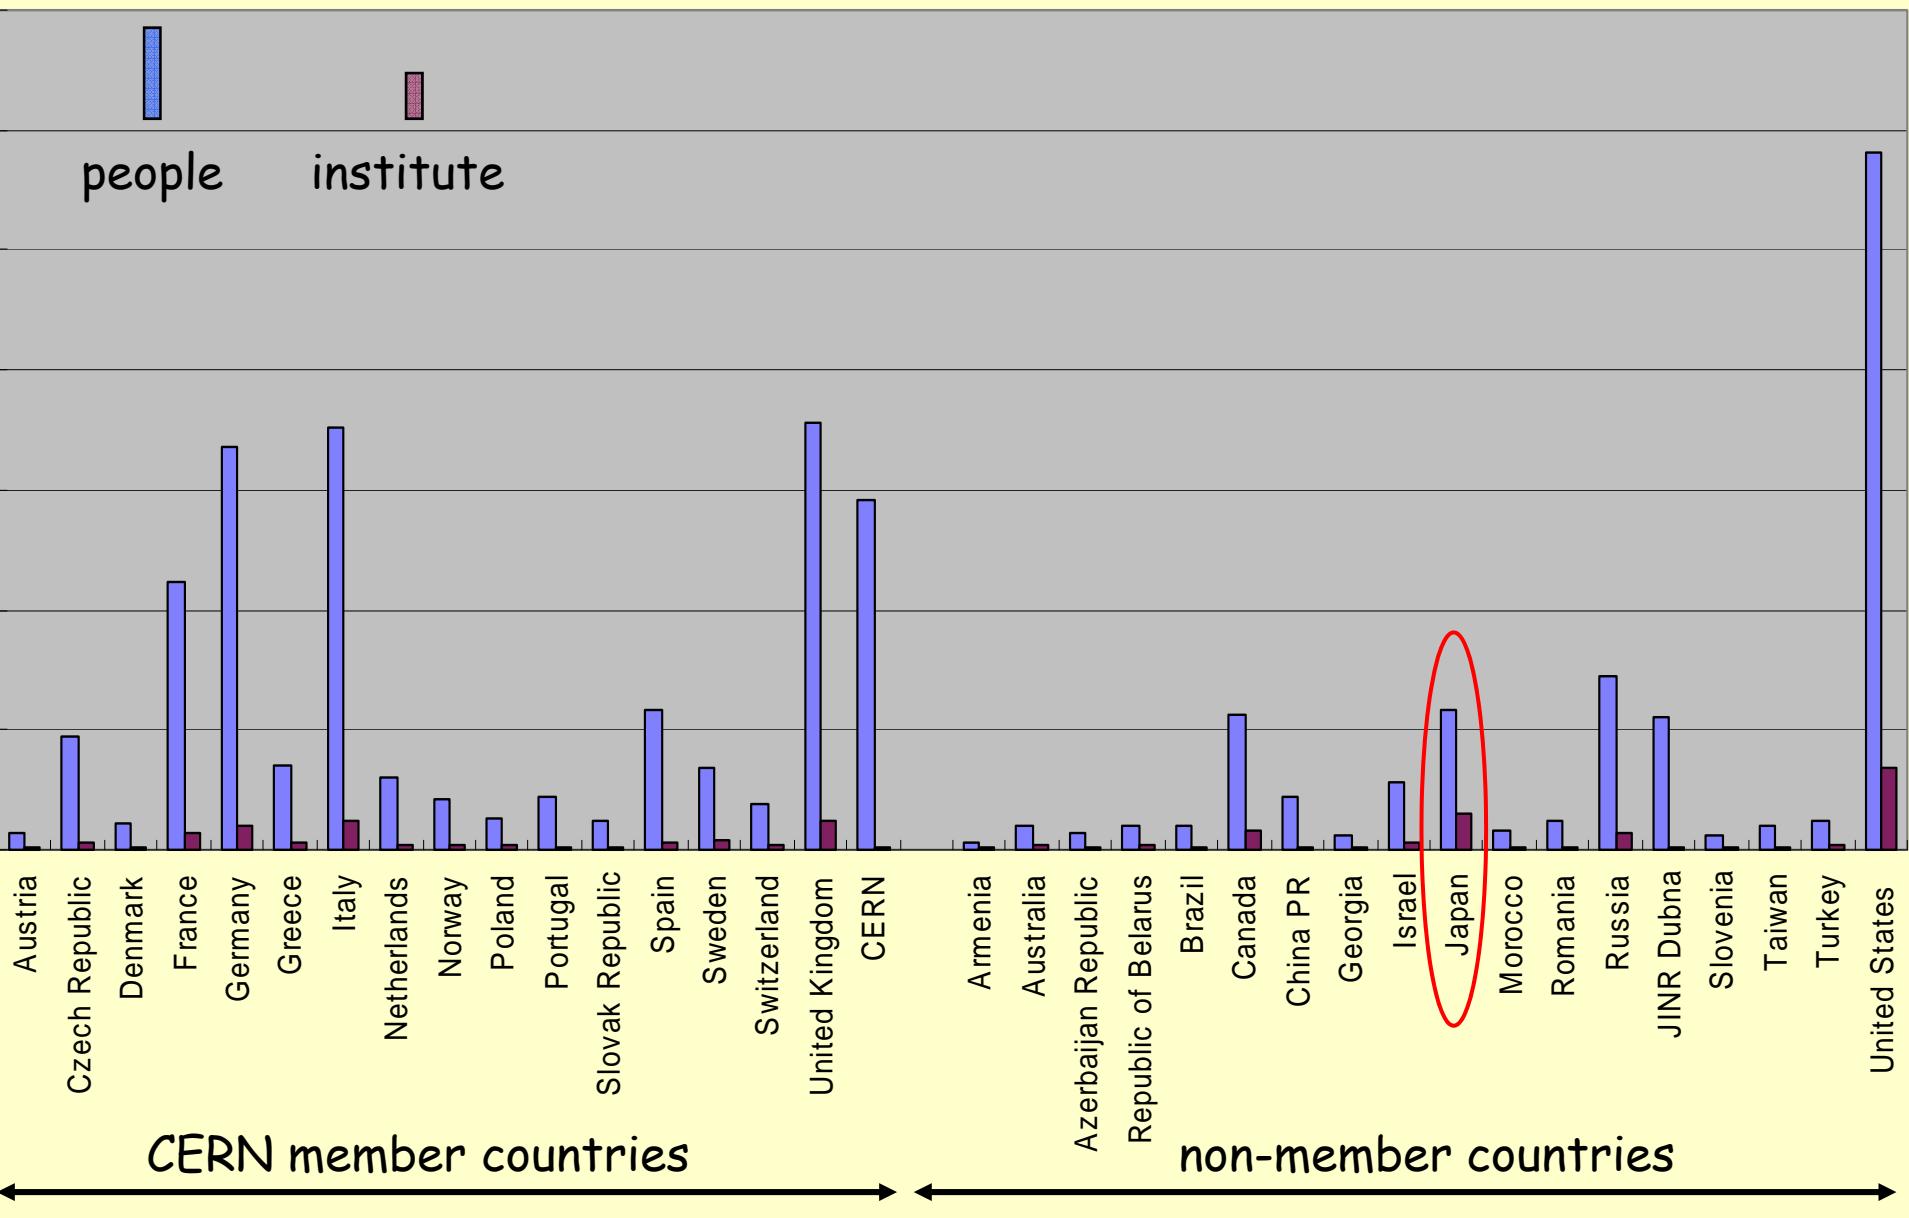

ATLAS-Japan

15 Institutes

~ 60 Scientific authors

ATLAS Detector: construction and commissioning

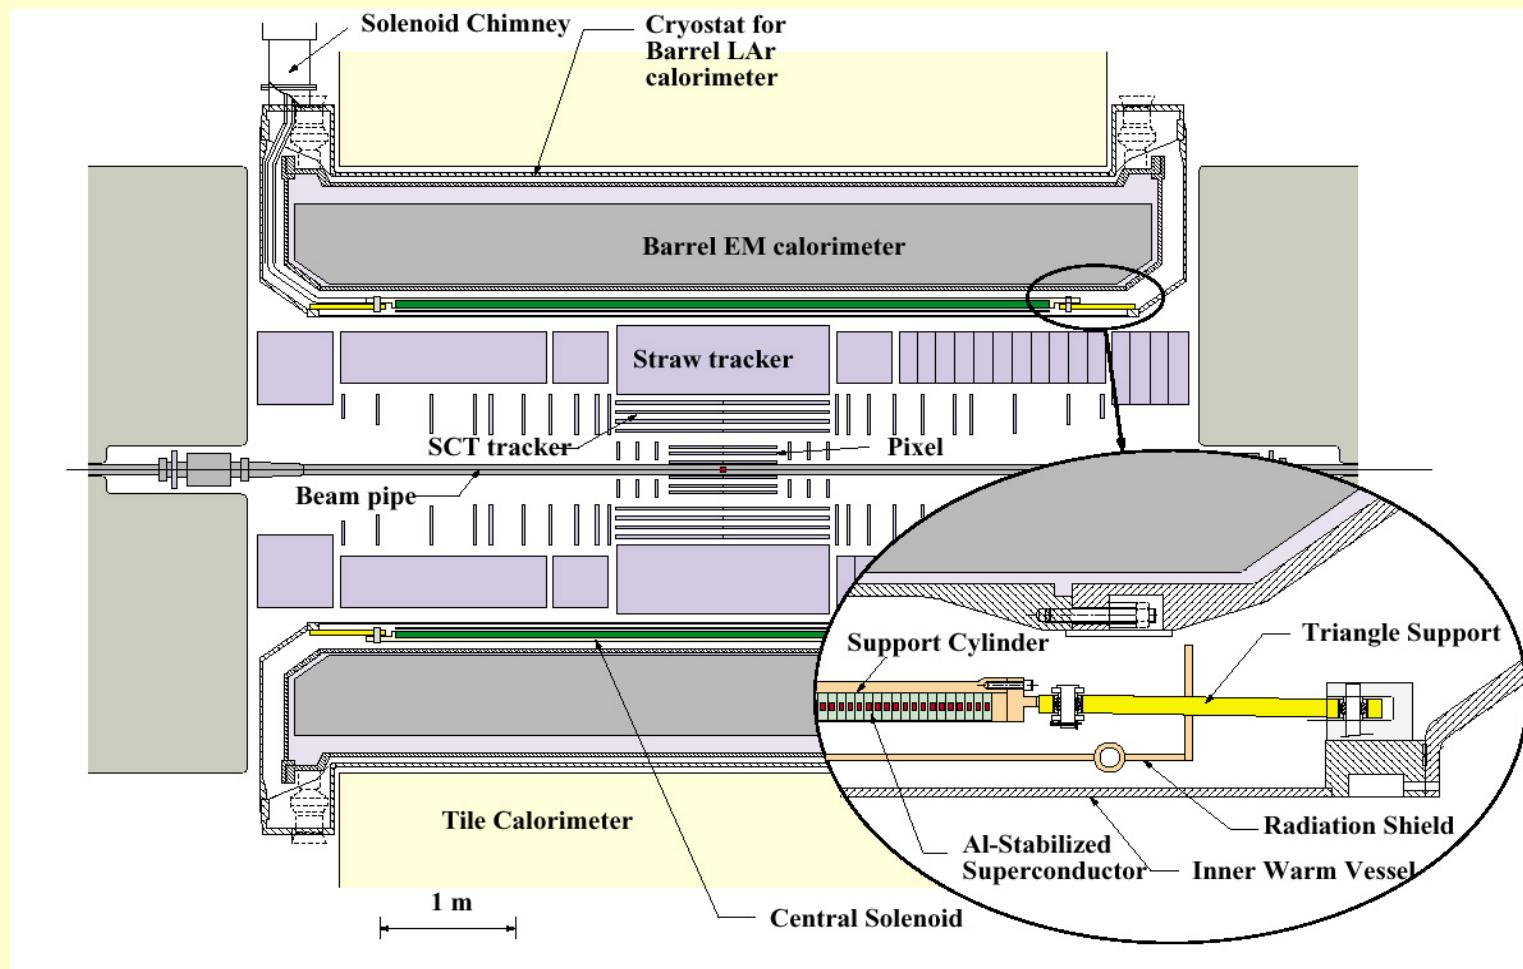

- **Tracking ($|\eta| < 2.5$, $B(\text{solenoid}) = 2\text{T}$) :**
 - Si pixels and strips
 - Transition Radiation Detector (e/π separation)
 - **Calorimetry ($|\eta| < 5$) :**
 - EM : Pb-LAr
 - HAD: Fe/scintillator (central), Cu/W-LAr (fwd)
 - **Muon Spectrometer ($|\eta| < 2.7$) :**
 - air-core toroids with muon chambers
- Length :** ~ 46 m
Radius : ~ 12 m
Weight : ~ 7000 tons
~ 10^8 electronic channels
~ 3000 km of cables

Construction to detector components:

- Superconducting Central Solenoid (100%)
- Time-to-digital conversion chips for muon drift tubes (100%)
- End-cap muon triggering system (TGC) (~50%)
- Silicon microstrip tracking system (SCT) (~20%)

ATLAS Central Solenoid (2T) : 100% responsibility by KEK (1)

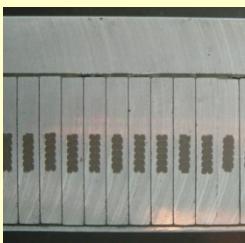

Specific features to minimize material thickness

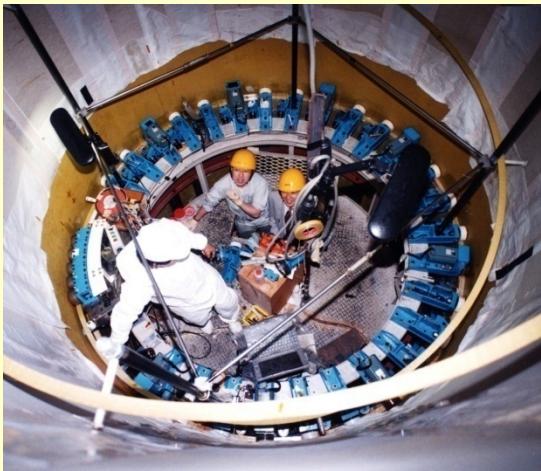

- Use of high strength Aluminum stabilizer for SC cables
- Common cryostat with LAr barrel EM calorimeter

ATLAS Central Solenoid : 100% responsibility by KEK (2)

Superconductor production

test coil winding
(1997-8)

Coil winding (1999)

Coil assembly at Toshiba (1999)

Arrived at CERN (2001.9)

2001.7 Shipped from Yokohama Bay

Tested in Japan (2000.12)

ATLAS Central Solenoid : 100% responsibility by KEK (3)

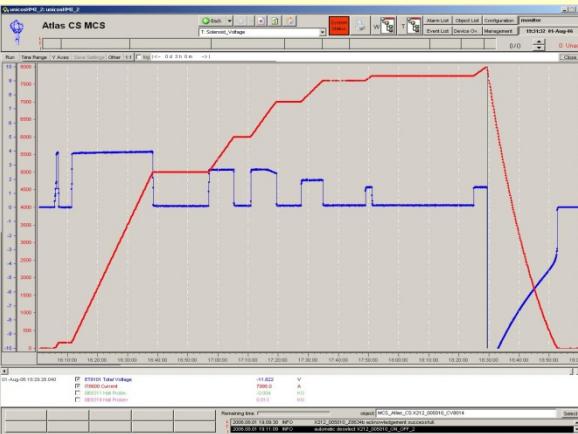

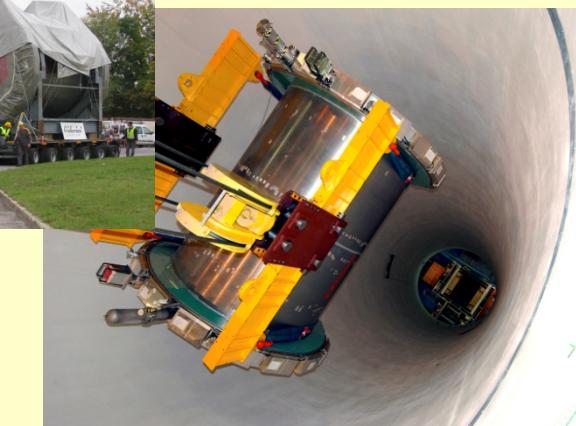

coil insertion to LAr cryostat (2004.2)

Connection works, cooldown and test (2004.2-9)

Transportation to ATLAS pit (2004.10)

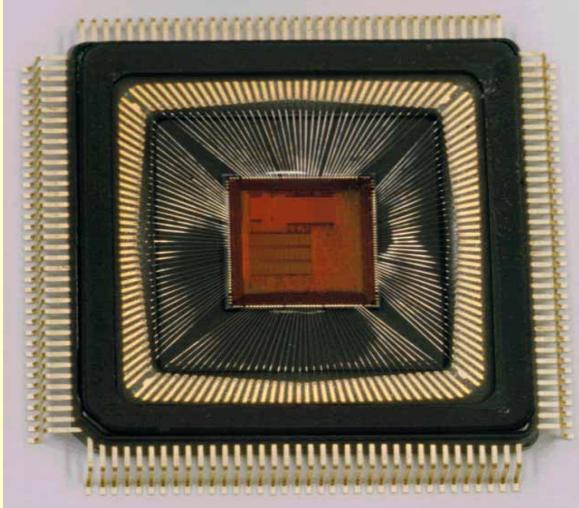

2006.8.1 Solenoid was successfully commissioned up to 8.0 kA, exceeding 7.73 kA for B=2 Tesla operation.

7/12/2007

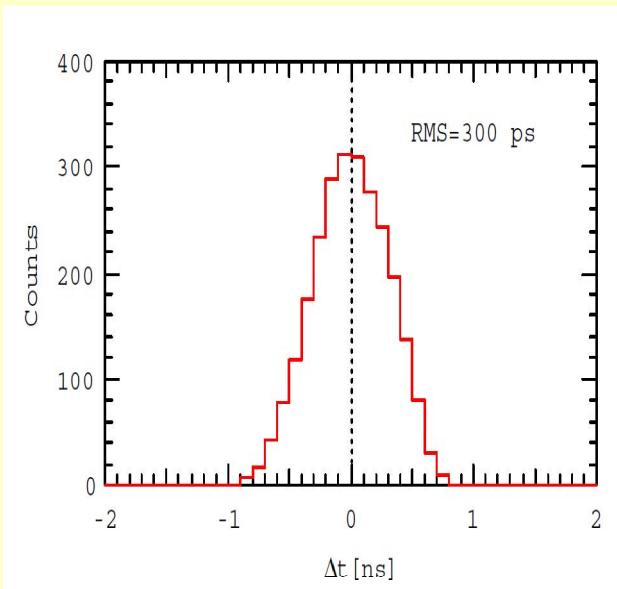

Installation into the ATLAS Detector center (2005.11) 9

TDC chips for ATLAS muon drift tubes (MDT)

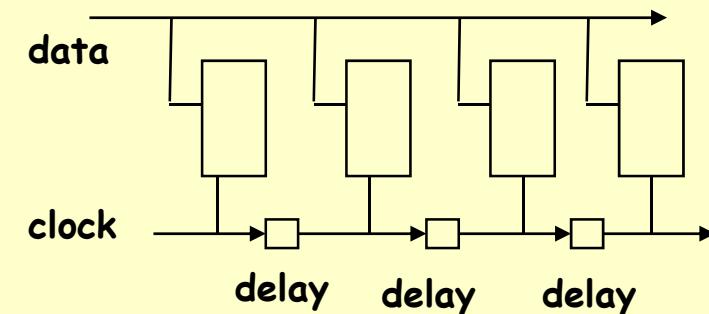

24ch TDC chips
for ATLAS MDT,
20,000 chips made.

$\sigma \sim 300$ ps,
non-linearity $<+-80$ ps

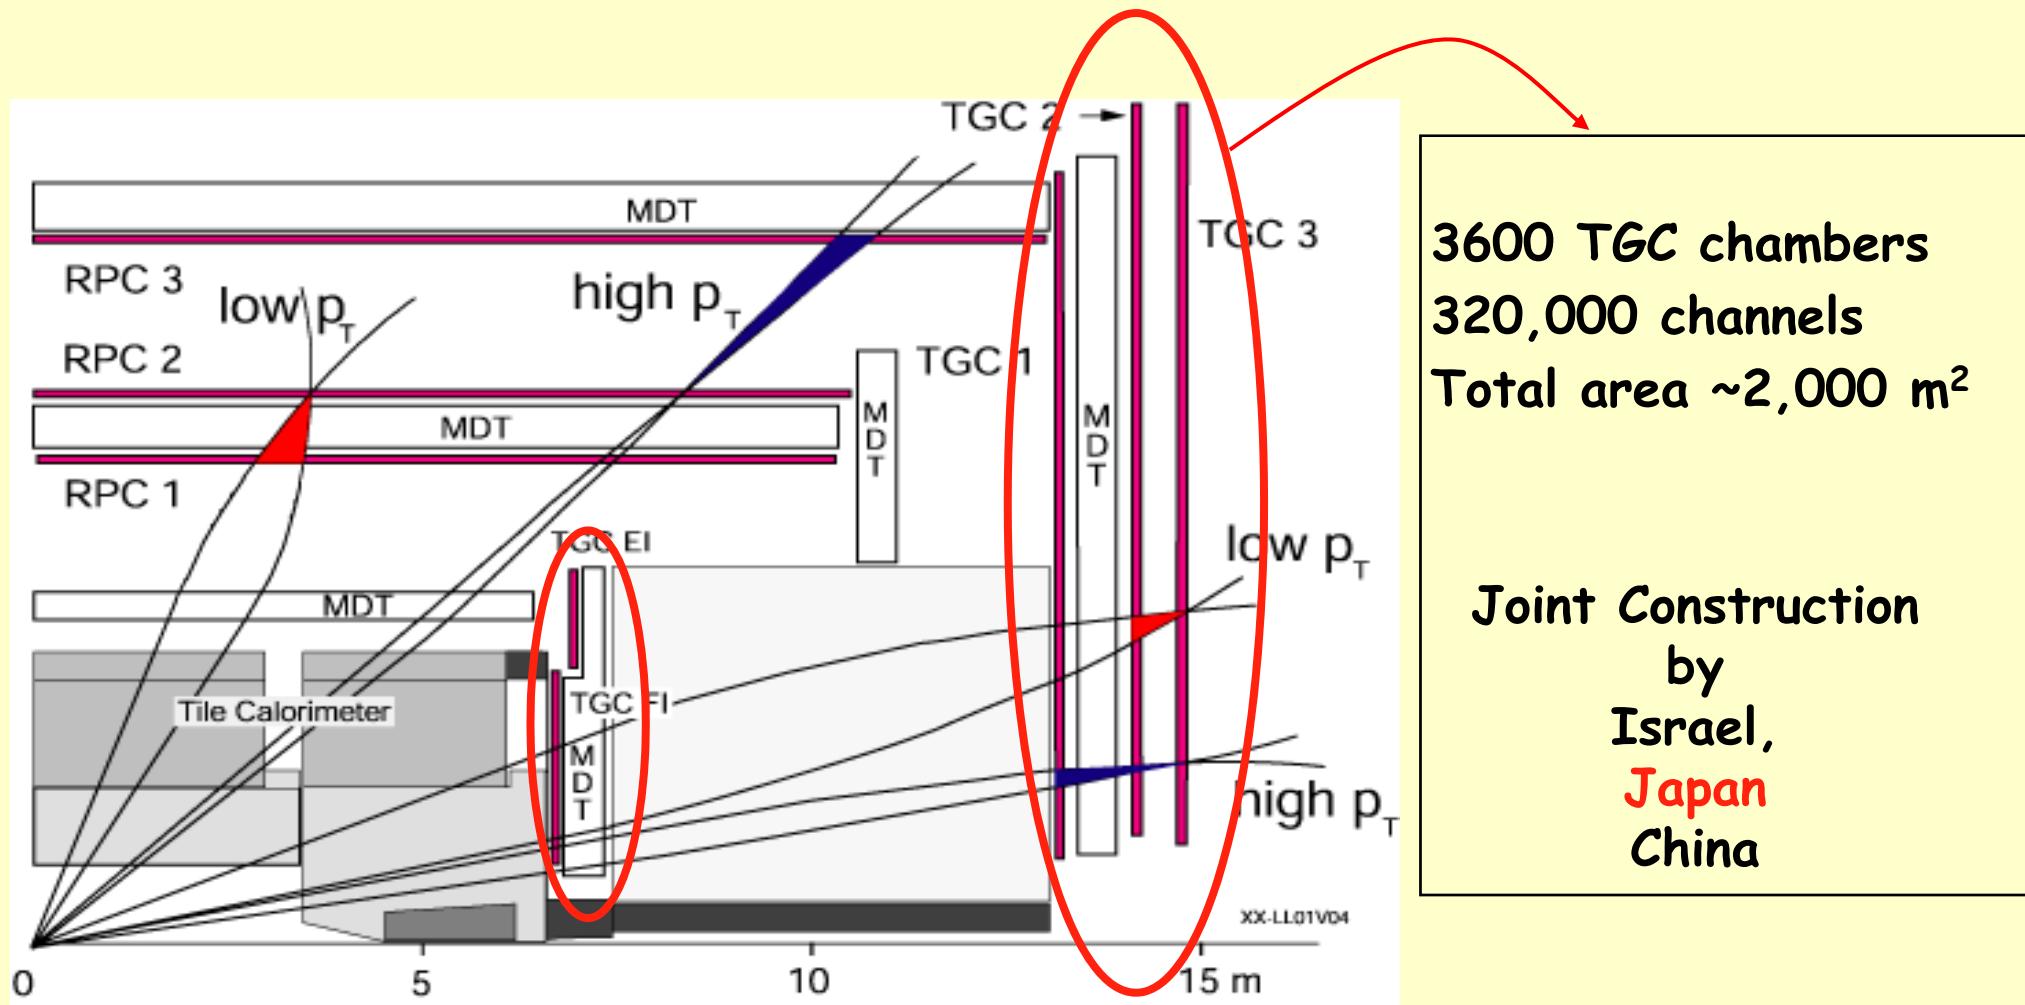

* Similar chips used in
H1 at HERA, Phenix,
DO, K2K.....

7/12/2007

Mounted on ATLAS MDT 10

TGC(1): Thin Gap Chambers (TGC) for μ triggering

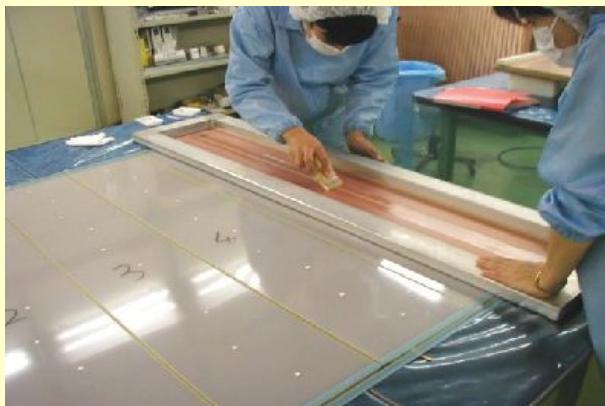

High energy muons penetrate calorimeters and be bent by magnetic field of toroid. TGC system measures the bend angle for Level-1 triggering.

TGC(2): 1200 TGC chambers were produced at KEK

We accomplished 2 chambers/day and finished 1200 TGC chambers in 4 years

carbon spray

epoxy gluing

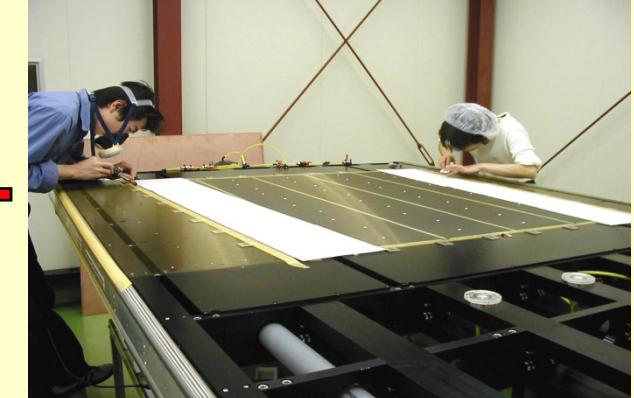

Automatic wire winding

Chamber assembly and ATLAS
inspection team

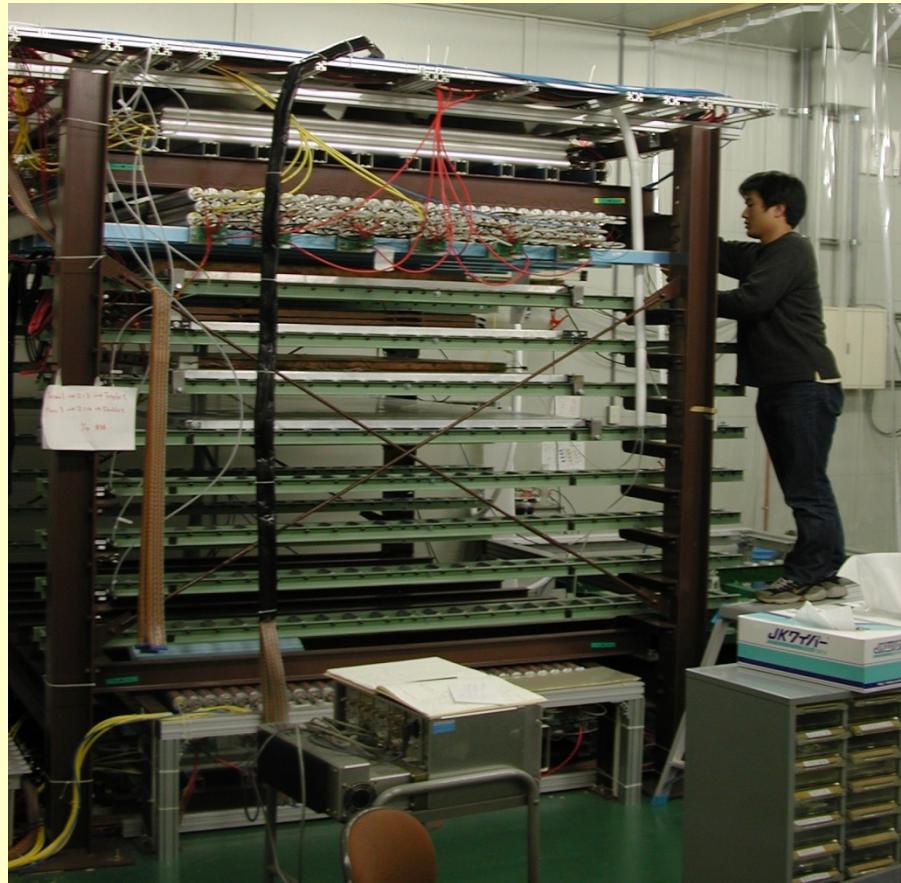

Checking & HV test

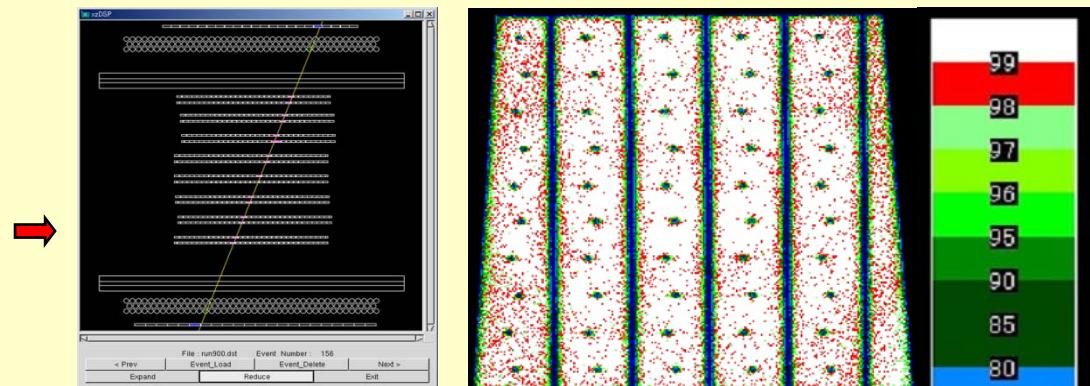

Soldering tungsten wires

TGC(3): Inspection of all chambers using cosmic-rays

All TGC chambers were inspected using the cosmic-ray station built at Kobe Univ.

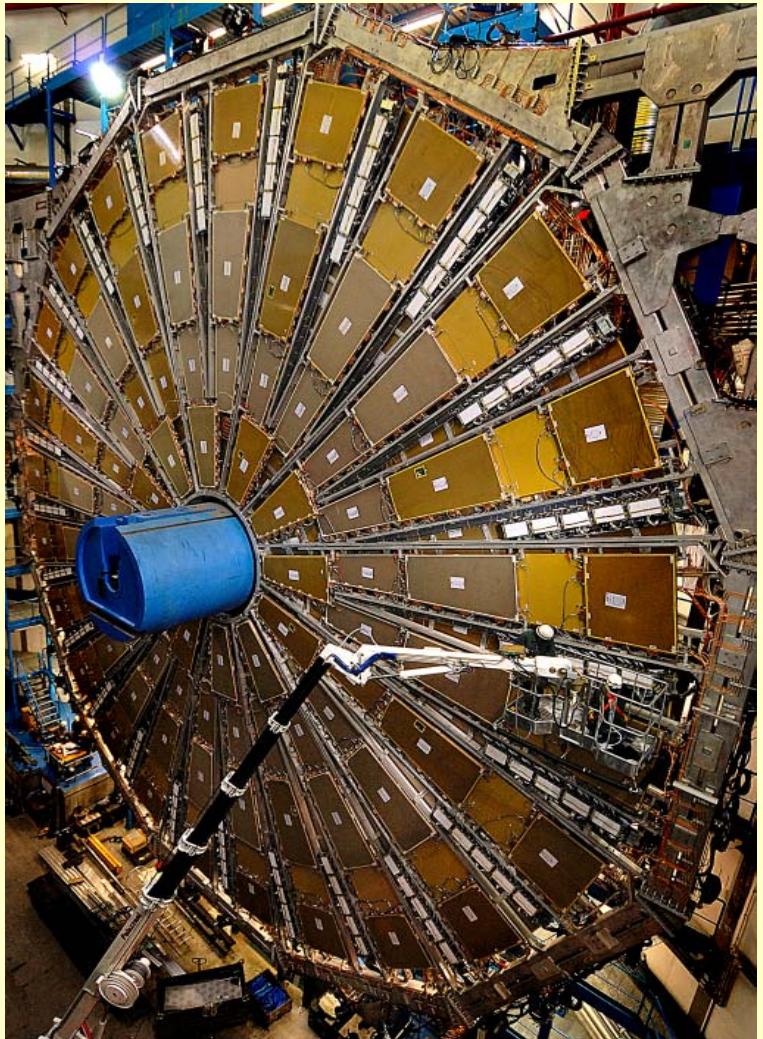

Event display
with cosmic-rays

Efficiency map of a TGC chamber

THC chambers passed the cosmic-ray inspection were packed in air-conditioned containers by transportation to CERN.

TGC(4): Assembly and Installation at CERN

1 st Big-wheel construction in
ATLAS pit (2006.11)

Mass production of readout
boards (KEK)
all designed by Japan

Transportation to
ATLAS pit

Chamber repair at CERN

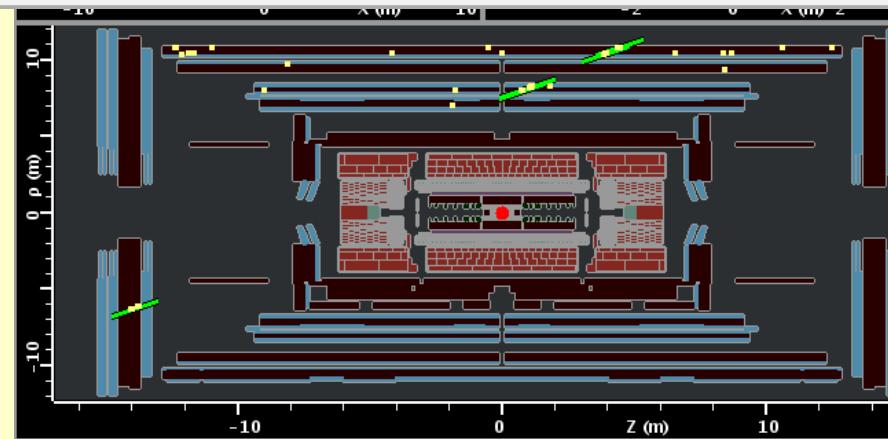

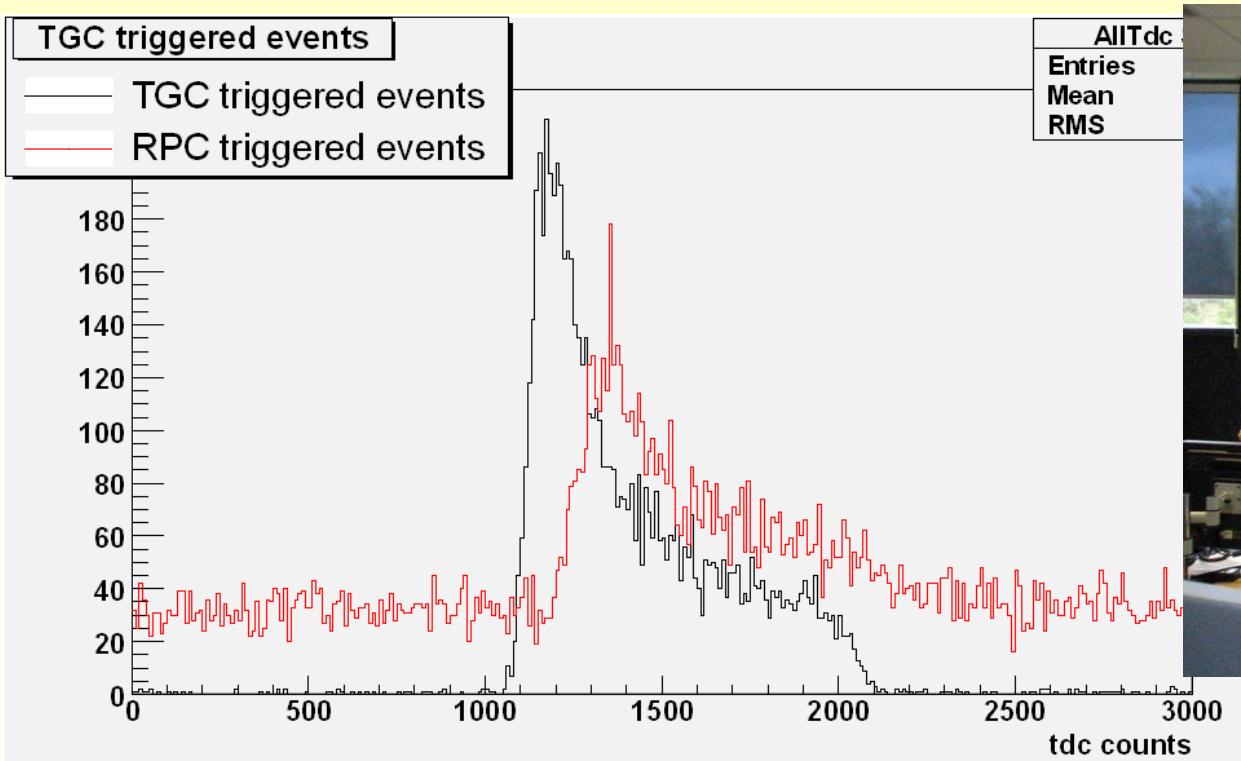

Assembly of chambers and
electronics at CERN bldg. 180.

All Big-wheels were installed in
ATLAS pit (2007.9)

Commissioning

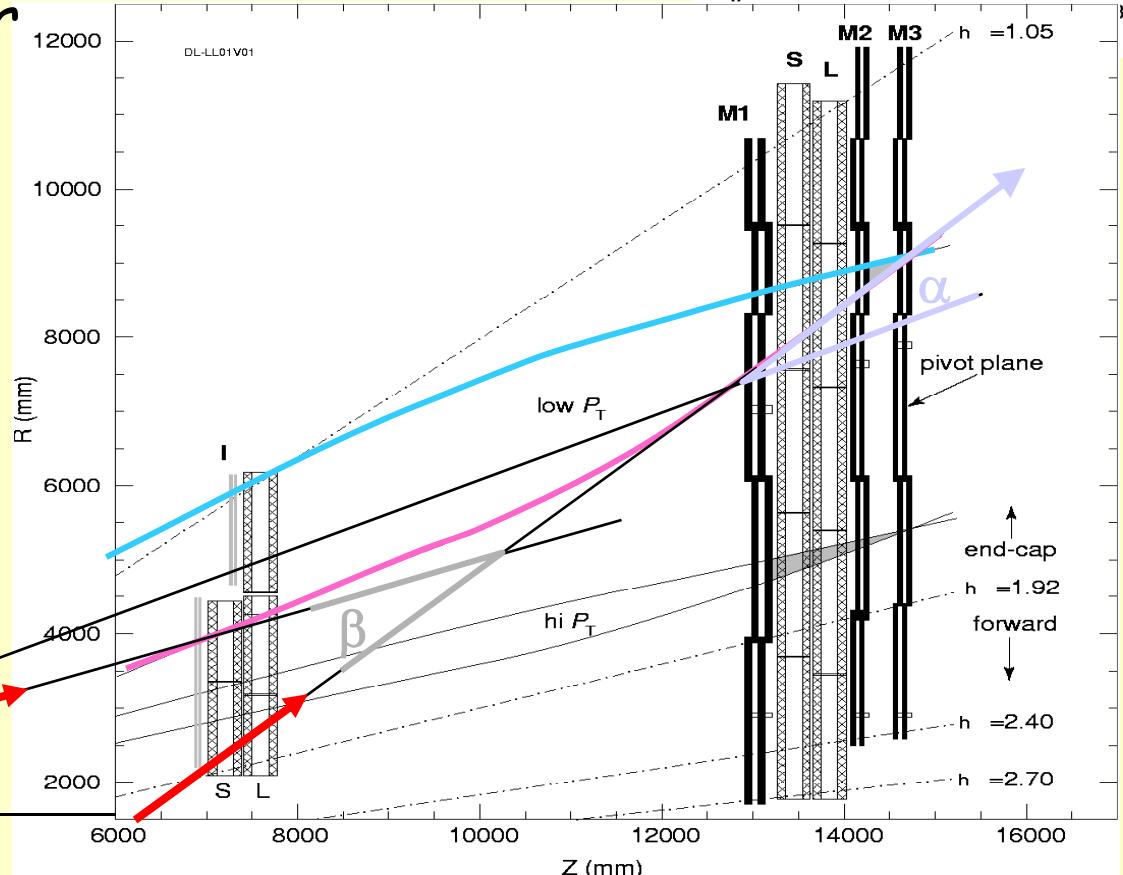

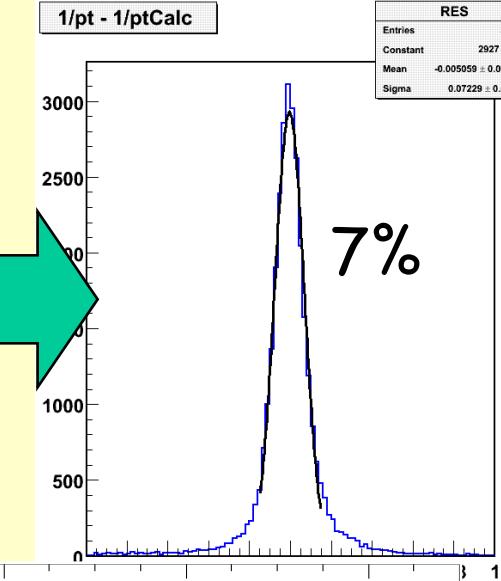

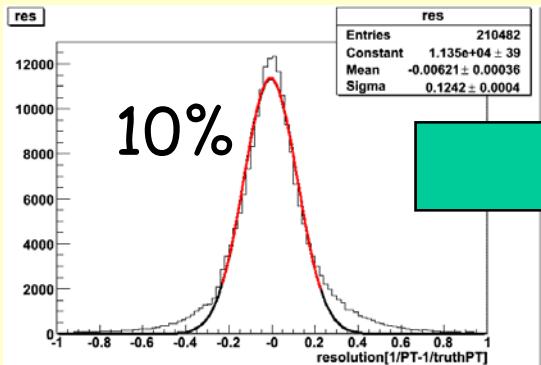

Muon Higher Level Trigger

Muon rate reduction from the improved Pt resolution at LVL2 trigger.

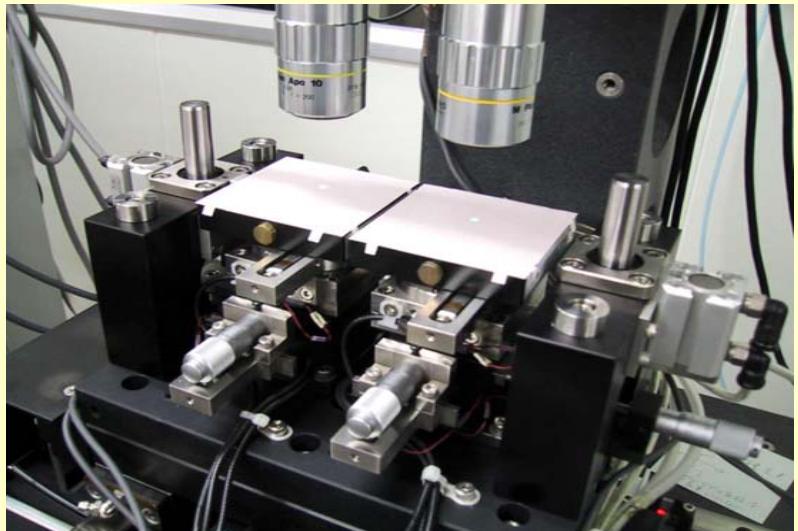

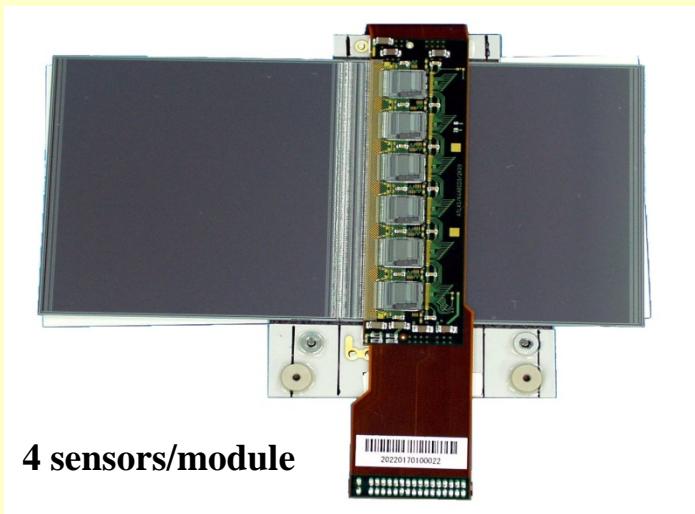

- use of MDT information
- use of inner muon chamber
- better algorithm

KEK/Kobe group has joined to the effort on improving the LVL2 muon performance, in collaboration with Rome and Technion groups.

Pt resolution

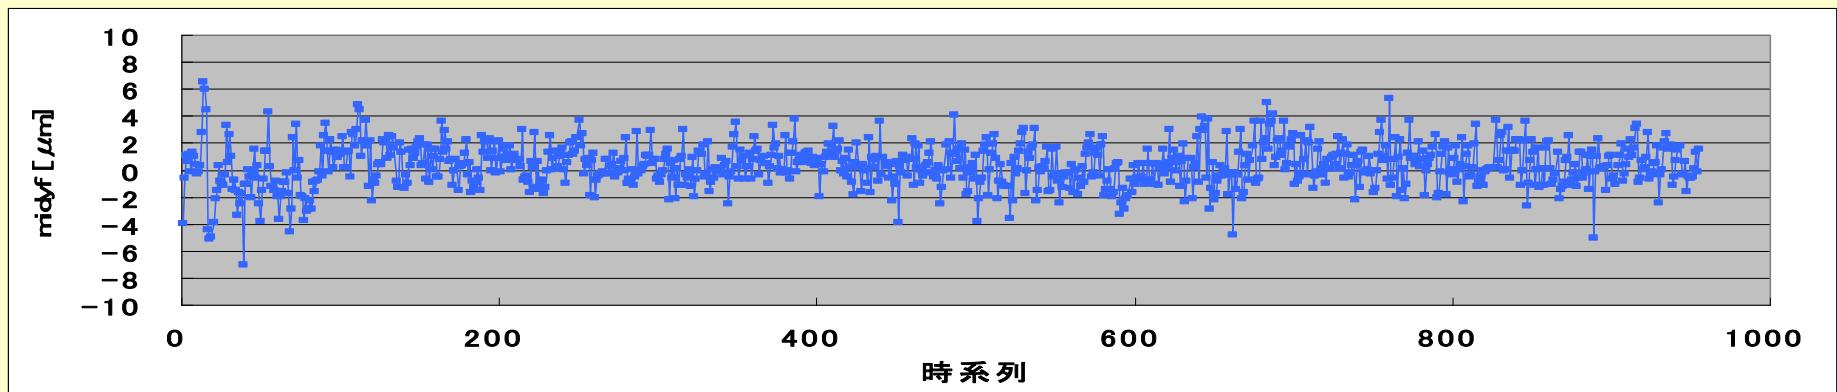

ATLAS Silicon Micro-strip Detector (SCT)

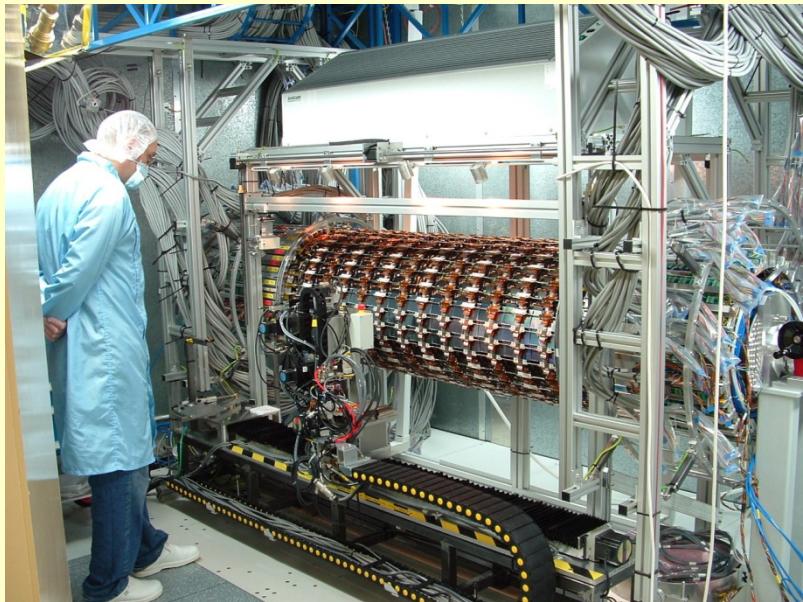

The module is based on Japan's idea.
KEK assembled 980 modules (40%).

Sensor alignment system (KEK)

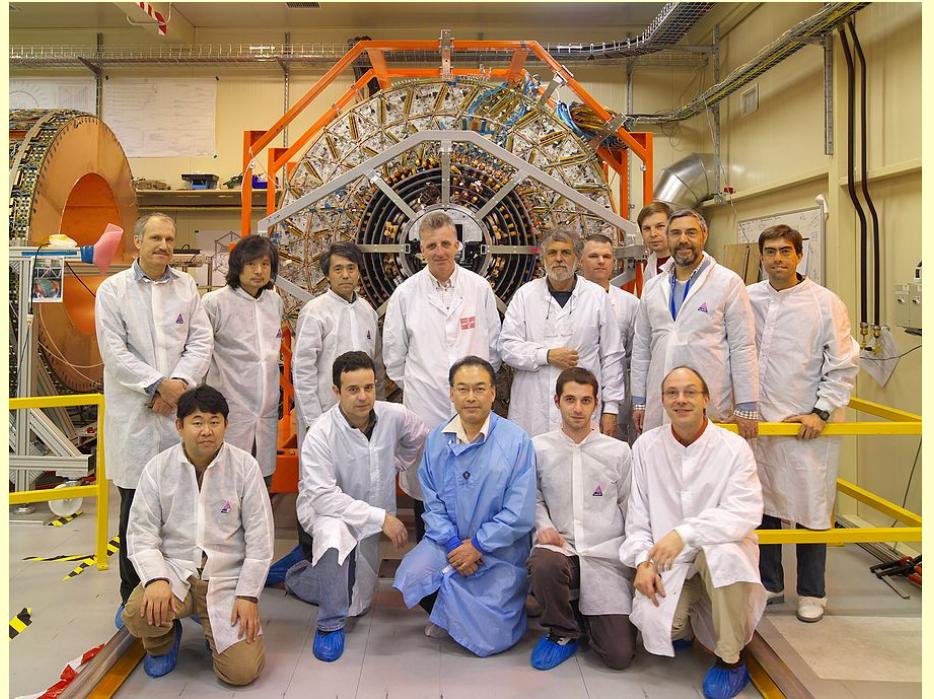

The accuracy of module assembly is mostly within $\pm 2 \mu\text{m}$, the best performance among four assembly sites.

ATLAS Silicon Micro-strip Detector (SCT)

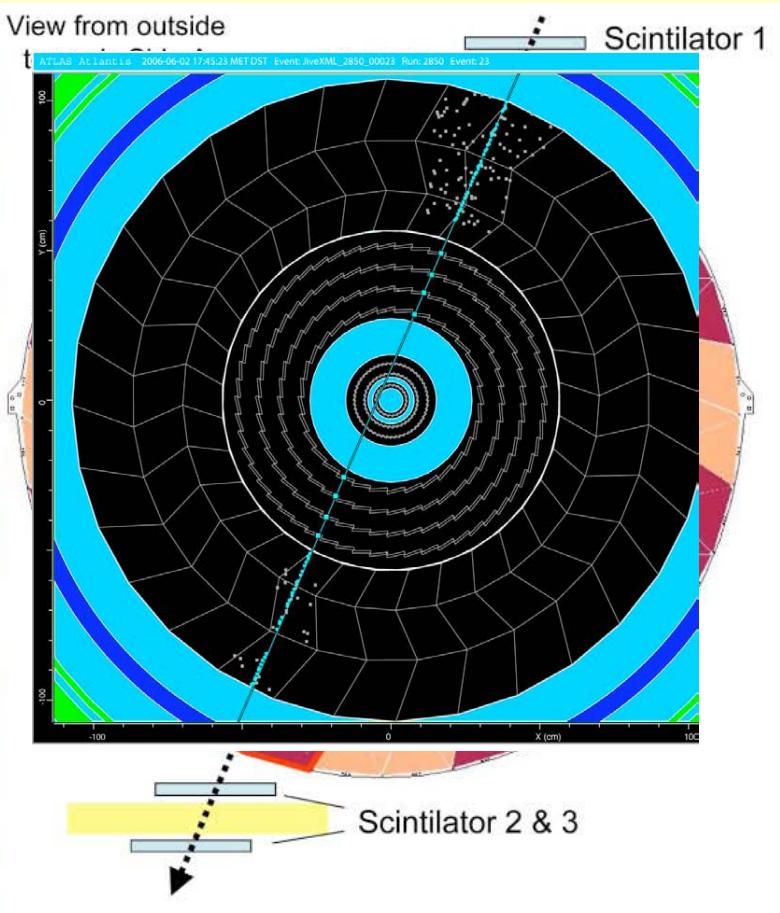

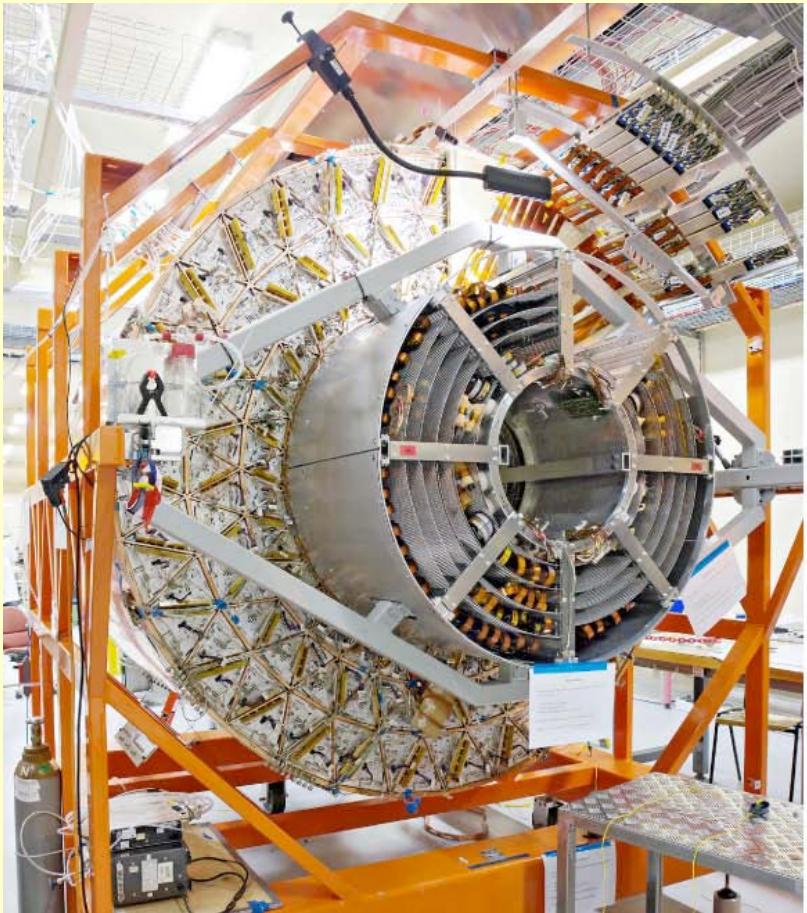

Module assembly at Oxford
with KEK mounting robot.
(2112 modules on 4 cylinders)

SCT-TRT integration in the surface building.(Feb. 2006)

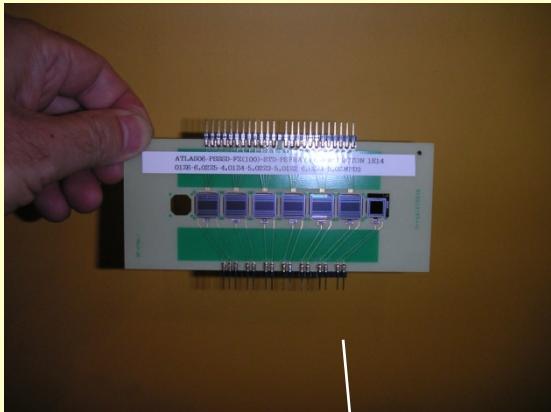

ATLAS Silicon Micro-strip Detector (SCT)

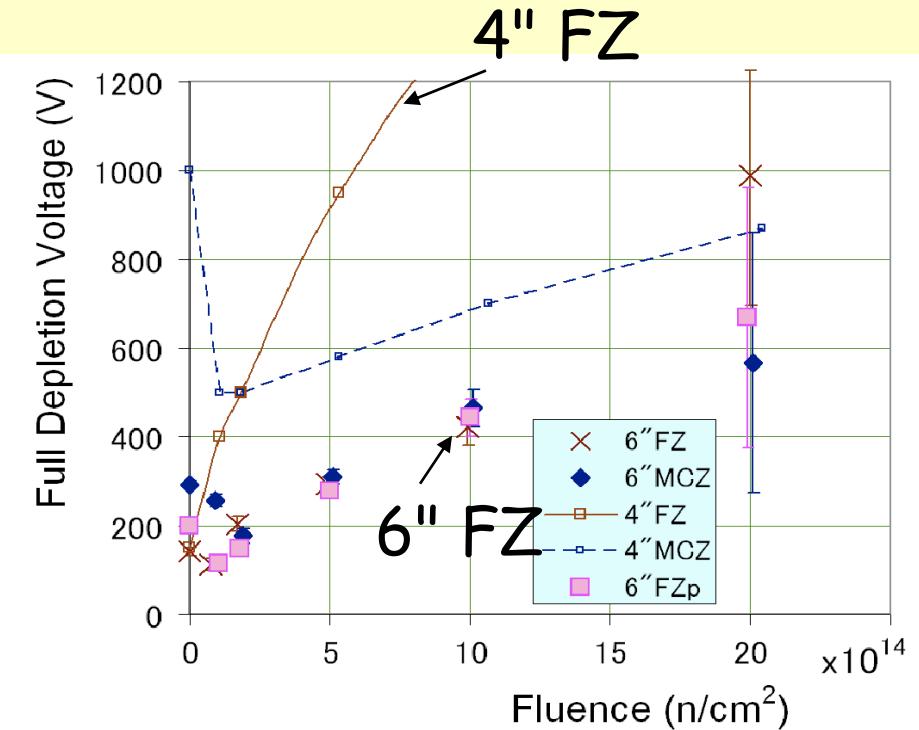

Cosmic test on surface
with 468/2112 SCT modules, 1/8 TRT

SCT for SLHC

Proton irradiations in Japan at CYRIC, Tohoku U.

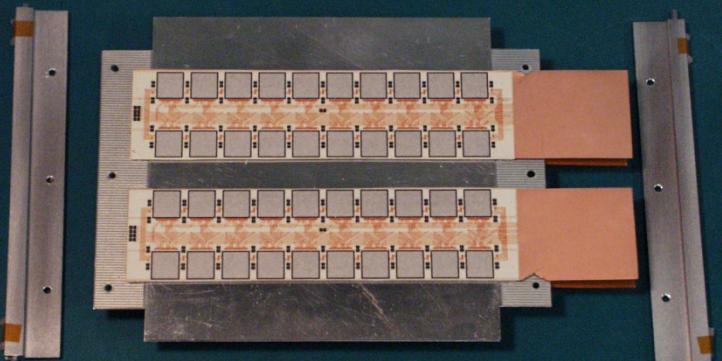

$\text{LHC}(2 \times 10^{14}) \rightarrow \text{SLHC}(1 \times 10^{15})$

$4'' \text{ FZ} \rightarrow 6'' \text{ FZ} (\text{or MCZ})$

Irradiations have found
very different V_{dep}
evolution

SCT for SLHC : SLHC Module Development

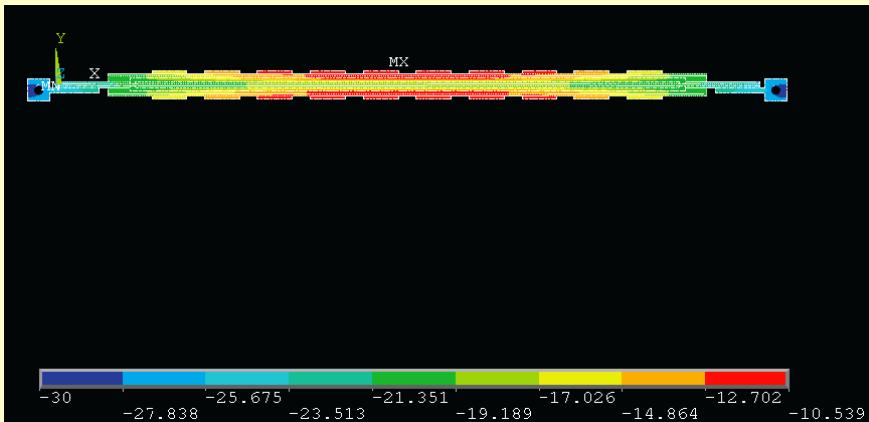

SLHC module mock-up: module (centre), cooling plates (2 sides)

Heat generation after radiation-damaged:

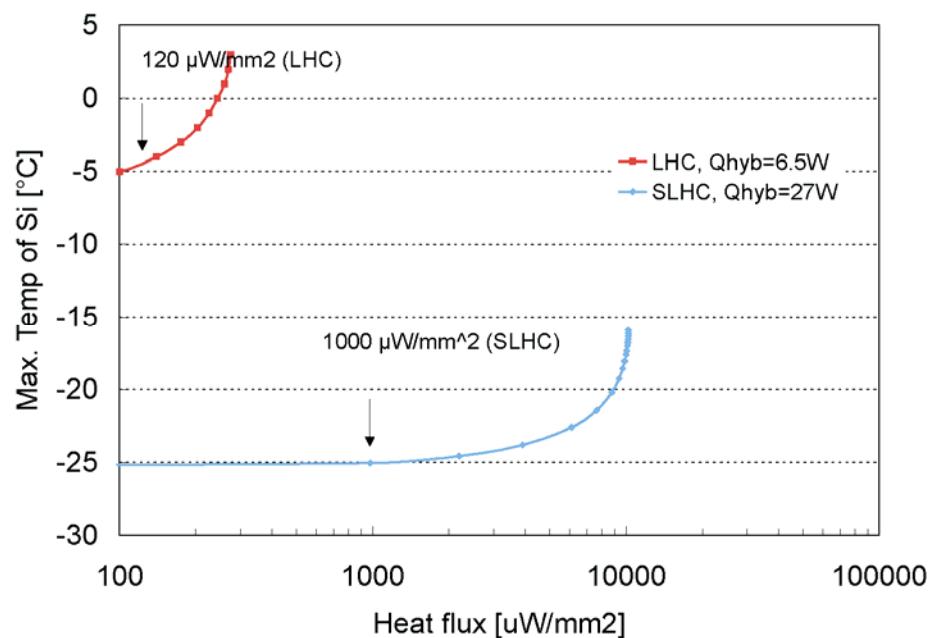

LHC($120 \mu\text{W}/\text{mm}^2$)

→ SLHC($1000 \mu\text{W}/\text{mm}^2$)

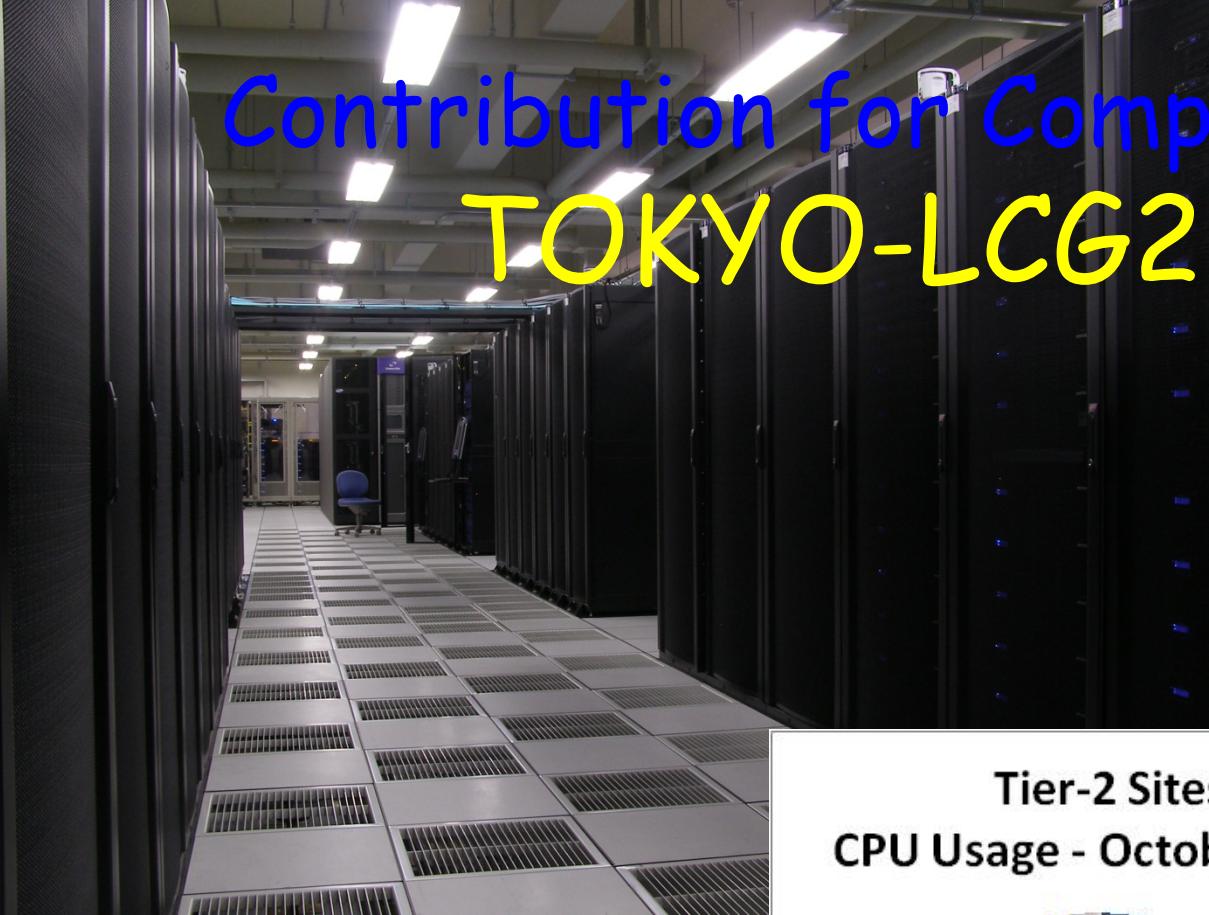

Thermal design and cooling are critical

ANSYS FEA simulation example

Contribution for Computing TOKYO-LCG2

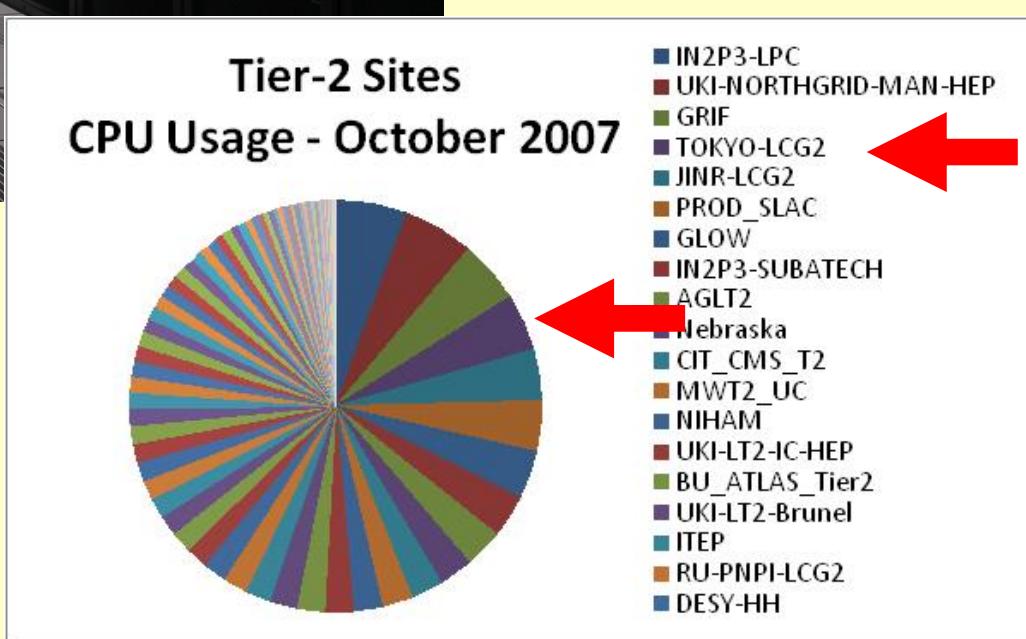

WLCG Resource
Pledged in 2007:

CPU: 1000kSI2k

Disk: 200TB

7/12/2007

LCG Tier2 Center for ATLAS is operational since 2005 at International Center for Elementary Particle Physics (ICEPP), the University of Tokyo

Physics preparation

- Growing contributions in ATLAS physics groups
 - Shoji Asai (Tokyo) : SUSY convener (2005-2006)
 - Osamu Jinnouchi (KEK) : Monte Carlo Coordinator (2007-)
 - Soshi Tsuno (KEK) : Higgs VBF group coordinator
- Higher weights on Higgs and SUSY physics. But start contributing to the other physics, such as B-physics and SM.
(we need more man power)

Summary

- Japanese group has been taking major roles in the detector construction. (Solenoid, TGC, SCT, MDT frontend)
- Commissioning of the detectors are on going with cosmic rays.
- New contribution on HLT muon trigger
- Physics contributions are growing.
- R&D studies for LHC upgrade has already started.
