

Azimuthal anisotropies in lead-lead and proton-lead collisions with the ATLAS detector

Friday 17 May 2013 14:40 (40 minutes)

The presentation will give an overview of measurements of azimuthal anisotropies performed by the ATLAS collaboration using Pb+Pb collisions at $\sqrt{s_{NN}}=2.76$ TeV and p+Pb collisions at $\sqrt{s_{NN}}=5.02$ TeV.

Presenter: WOSIEK, Barbara Krystyna (Polish Academy of Sciences (PL))
