

Operations Review 2007 for the LHC Injector Chain

The 2007 run was successful with many different beams provided to an ever increasing number of clients. However, this success does not mean that no problems were encountered in the different machines that made the way to this success not always easy.

This presentation will give a brief statistical overview of the availability of the injector chain and identifies the major problem areas together with the lessons learned that will or have to be put in practice. The recent changes and consolidation that contributed to this success will also be highlighted.

The 2007 run was the final rehearsal for next year's LHC run and now we have to get ready for the "Grand Première".

Keywords: LINAC 2, PS Booster, PSB, PS, CPS, SPS, statistics, LHC injector chain.
