Simon Baird: “The PS complex controls renovation project; scope and milestones”

In order to coordinate the AB/CO activities in the PS complex controls renovation project with the relevant activities inside the equipment groups, a series of meetings have taken place with the equipment groups. The aim of these meetings was to identify all activities concerned with PS Complex Controls renovation inside the different groups. These plans will define a series of important milestones for the controls renovation project. Our current understanding of these plans will be presented.
