

Integrating Authentication and Authorization Infrastructures with Grids

Thursday, 31 January 2008 14:25 (40 minutes)

The visions of grid computing as well as the vision of national authentication and authorization infrastructures (AAI) have both become reality in the past few years. Whereas Grid security is based on X.509 certificates, AAls are typically based on federating campus identity management systems. We review the current state of interoperability between Grids and AAI with a focus on Shibboleth, the most widely used AAI today.

Presenter: LA JOIE, Chad (Switch)

Session Classification: Day 1 - Thursday
