

DPS in p-A and A-A collisions

Tuesday, 3 December 2013 14:15 (25 minutes)

The DPS cross sections in p-A and A-A collisions are compared to those in p-p collisions. Such DPS formalism is applied to two different final-states at CERN LHC energies: (i) same-sign W-boson pair production in p-Pb, and (ii) double-J/psi production in Pb-Pb.
