

Roger Forty

Mini-CV

I am a research physicist at CERN, working on the LHCb experiment at the LHC.

I studied in Oxford University, and then Imperial College London, and since my PhD have been working at CERN on the ALEPH experiment and LHCb.

My particular interests are flavour physics (the study of CP violation and rare decays with heavy quarks), and designing particle identification detectors: I designed the layout of the RICH detectors in LHCb, and am now working on some new ideas for the upgrade of the experiment.
