

After my undergraduate studies in Italy (Milano), with a master thesis at the Gran Sasso Laboratory, I moved to Switzerland (University of Geneva) for my PhD. The PhD (2007) was about precision measurement of the muon lifetime with the FAST experiment, at PSI. Since 2008 I am a postdoc at ETH Zurich (being based at CERN), working on detector development for medical applications, and in particular for a novel PET concept, within the AX-PET experiment.
