## Results from the ArgoNeuT Experiment

*Friday, 20 September 2013 11:22 (22 minutes)*

Liquid argon time projection chambers provide an extraordinary level of information about the interactions of neutrinos. The Argon Neutrino Teststand, or ArgoNeuT, experiment deployed a relatively small detector in the NuMI neutrino beamline at Fermilab, and the data collected during that endeavor is now being used to measure neutrino and antineutrino interaction cross-sections. This talk will include discussion of recent results and ongoing analyses from ArgoNeuT.
