Measurements with electroweak gauge bosons at LHCb

Friday, 20 September 2013 11:00 (30 minutes)

We report measurements of electroweak boson production in the forward region, using data collected at the LHCb experiment with a centre of mass energy of $\sqrt{s}=7$ TeV with an integrated luminosity of up to 1.0 fb⁻¹. W and Z bosons are reconstructed in leptonic decay channels, and their cross-sections determined using data-driven techniques. All results are compared to NNLO predictions.
