B-physics: status, and outlook after LS1 and LS2

Tuesday, 17 September 2013 09:00 (30 minutes)

I present an overview of the (major) progress recently made by experiment on various Bd- and Bs-meson decays, long awaited by theory.

I also provide an outlook after LHC's LS1 and LS2 of the perspectives on these decays, as well as on novel related observables that will become accessible.
